

NOTES FOR AUTHORS

Seed Science Research provides an international vehicle for the publication of original papers and review articles on the fundamental aspects of seed research. The emphasis is on the physiology, biochemistry, molecular biology and ecology of seeds, covering the following key topics: seed and embryo development, genetic engineering (modification), biotechnology, maturation, dormancy, germination, viability, longevity, vigour, chemical and structural defences, reserve mobilization, ecophysiology, seed–soil and seed–animal interactions and computer modelling.

All articles should be exclusively submitted via the link on the Journal's homepage at www.journals.cambridge.org/ssr

Authors are asked to keep personal copies of all files submitted.

On submission

Text. Articles should be single column, double line spaced. The use of formatting should be minimal. However, when necessary bold, italic, subscript and superscript should be indicated using the facilities of the word processing software. Tables, figures and equations should also be included as separate pages, and appropriately cited within the text (i.e. "Table 1 here"). Standard abbreviations (e.g. Fig. and Figs) and IUPAC units must be used. Use British rather than American spellings. Use 'z' rather than 's' spellings in words with 'ize'.

Abstract. Each article must commence with an accurate, informative abstract in one paragraph, that is complete in itself and intelligible without reference to text or figures. It should not exceed 250 words. A short title should be provided as a running head.

Keywords. Between four and seven should be given in alphabetical order. They should include the main subjects of the research and the plant material.

Tables. Tables should be reduced to the simplest form and present only essential data. The use of vertical rules should be avoided whenever possible.

Illustrations. All figures should be accompanied by appropriate legends. The inclusion of color illustrations will require the authors to make a financial contribution towards the costs.

To ensure that your figures are reproduced to the highest possible standards, Cambridge Journals recommends the following formats and resolutions for supplying electronic figures.

Please ensure that your figures are saved at final publication size and are in our recommended file formats. Following these guidelines will result in high quality images being reproduced in both the print and the online versions of the journal.

Line artwork

Format: tif or eps

Colour mode: black and white (also known as 1-bit)

Resolution: 1200 dpi

Combination artwork (linelitone)

Format: tif or eps

Colour mode: grayscale (also known as 8-bit)

Resolution: 800 dpi

Black and white halftone artwork

Format: tif

Colour mode: grayscale (also known as 8-bit)

Resolution: 300 dpi

Colour halftone artwork

Format: tif

Colour mode: CMYK colour

Resolution: 300 dpi

Supplementary Material. There will normally be one of the following reasons for you to be supplying supplementary material to accompany the online version of your article:

1. You wish to link to additional information which due to its nature does not lend itself to print media (examples – full data sets, movie or sounds files etc...)
2. The Editor of the Journal has requested that you extract certain information from the original article in order to allow for space constraints of the print version.
3. You have requested additional material to be available to accompany an article that does not normally allow such material to be included (example – tables to accompany a correspondence article).

N.B: Please note that *no* copyediting or quality assurance measures will be undertaken on supplementary material (other than to ensure that the file is intact). The authors therefore warrant that the supplementary material that they submit is in a suitable format for publication in this manner. The material shall be published online in exactly the form that it is supplied.

References. References are loosely based on the Harvard System; they are cited in the text, using the author's surname and the year of publication, e.g. Henderson (1999) in chronological order. Where a reference has two authors 'and' should be used in the text and the reference list. Where three or more authors appear '*et al.*' should be used in the text, e.g. Hoekstra *et al.* (1999), but the surnames and initials of all the authors must be given in the list as follows.

Journal Article

Dussert, S., Chabrilange, N., Engelmann, F. and Hamon, S. (1999) Quantitative estimation of seed desiccation sensitivity using a quantal response model: application to nine species of the genus *Coffea* L. *Seed Science Research* 9,135–144.

Books

(Eds) *Progress in seed research: proceedings of the second international conference on seed science and technology*. Geneva, New York, Communication Services, New York State Agricultural Experiment Station.

On final acceptance

Proofs. The corresponding author will receive a PDF file page proofs by email.

Copyright. Authors will be supplied with a copyright form which must be completed and returned to the Publisher. Papers are accepted on the understanding that the work has been submitted exclusively to the Journal and has not been previously printed elsewhere unless otherwise stated. Violations of scientific ethics, such as submission of work already published elsewhere, material in press, or plagiarism of other published work (in print or electronic form), will result in severe penalties. A lifetime ban will be imposed upon any authors violating these standards of scientific conduct.

Offprints. The author of an accepted paper will receive a free PDF file via email. Paper offprints may be purchased prior to the article going to press. An order form is available from the Publisher for this purpose and will be sent to the corresponding author with the article proofs. Completed order forms must be received before the article is printed.

Reprints. For all enquiries relating to bulk reprints for commercial use please email special_sales@cambridge.org

Please see full Instructions for Contributors at www.journals.cambridge.org/ssr before making any submission

SEED SCIENCE RESEARCH

CONTENTS

PREFACE

Tenth International Conference on Seed Science: Seed science in the 21st century S1–S2

REVIEW PAPERS

Seed science in the 21st century: its role in emerging economies S3–S8
Benech-Arnold, R., Semmartin, M. & Oesterheld, M.

Seed science in the 21st century: rights that scientists have to deal with S9–S14
Louwaars, N.

Genome-wide analyses of gene activity during seed development S15–S22
Harada, J.J. & Pelletier, J.

Maternal and zygotic temperature signalling in the control of seed dormancy and germination S23–S29
Kendall, S. & Penfield, S.

Modifying thioredoxin expression in cereals leads to improved pre-harvest sprouting resistance and changes in other grain properties S30–S35
Ren, J.-P., Li, Y., Wong, J.-H., Meng, L., Cho, M.-J., Buchanan, B.B., Yin, J. & Lemaux, P.G.

Seeds, recombinant DNA and biodiversity S36–S44
Rech, E.L.

Unravelling the complex trait of seed quality: using natural variation through a combination of physiology, genetics and -omics technologies S45–S52
Ligterink, W., Joosen, R.V.L. & Hilhorst, H.W.M.

Seed bank persistence and climate change S53–S60
Ooi, M.K.J.

Markers of seed quality: from present to future S61–S68
Corbineau, F.

Evaluation of seed quality: from physiology to international standardization S69–S73
Matthews, S., Noli, E., Demir, I., Khajeh-Hosseini, M. & Wagner, M.-H.

Validation of quality tests for forest seed species S74–S79
de Santana, D.G., Wielewicki, A.P. & Salomão, A.N.

From knowledge-based research towards accurate and rapid testing of seed quality in winter rape S80–S85
Wagner, M.-H., Ducournau, S., Luciani, A. & Léchappé, J.

Seed treatments: phytotoxicity amelioration and tracer uptake S86–S90
Taylor, A.G. & Salanenka, Y.A.
