

Notes for Contributors

1. Manuscripts should preferably be written in English, but papers in French and German will also be accepted. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Deputy Editor or the Editor.

2. Typescripts should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.

3. A short abstract of about 80 words should precede the main text. *List of symbols:* A typewritten list of any special symbols should be submitted with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential to help the typesetter and to avoid costly correction in proof.

4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.

5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy. Figures should be numbered consecutively, with arabic numerals, have descriptive captions, and be mentioned in the text. The correct position for each figure should be indicated in the margin of the manuscript.

6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables. Number tables

consecutively with roman numerals. Each should have a brief heading. Exceptionally lengthy tables may be summarized for publication with a note that copies of details can be obtained from the authors.

7. Equations: Wherever possible, mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. The printer will set all mathematical symbols in italics unless otherwise indicated; symbols or letters to be set in roman (upright) type should be encircled in pencil, while bold letters should be shown by a wavy underline.

8. References: In the text, references are indicated by superior arabic numbers (without brackets), and should be confined to publish work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names; cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of *Chemical Abstracts* or *Physical Abstracts*, and be underlined for italics: P.W. Anderson, "More is different" *Science* **177**, 393 (1972) C.V. Negoita, *Fuzzy Systems* (Abacus Press, Tunbridge Wells, UK, 1980)

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

9. Proofs: Page proofs will be sent to authors for correction, for return within 48 hours by airmail. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

10. Manuscripts, whether accepted or rejected, will not be returned to the authors.

11. Submission of an article will be taken to imply that it has not been previously published and that it is not on offer to any other publisher.

ROBOTICA

Volume 5 Part 4

October–December 1987

SPECIAL ISSUE ON CAD TOOLS IN ROBOTICS

CONTENTS

Introduction to the special “CAD in Robotics” issue, András Siegler (Hungary)	265
CAD-Based off-line programming of painting robots, Alexandr Klein (Hungary)	267
Geometric tools for the off-line programming of robots, R. K. Stobart (U.K.)	273
A 3-Dimensional computer animation system with robotic applications, András Siegler, Miklos Bathor and Gabor Deri (Hungary)	281
Computer simulation of sensor-based robot collision avoidance in an unknown environment, K. Sun and V. Lumelsky	291
ARC robot programming and control system, J. Huebener (USA) and M. Zecha (G.D.R.)	303
Towards sensor-based general purpose robot programming language, Rajko Milovanovic (Yugoslavia)	309
END OF SPECIAL ISSUE	
Reports and Surveys (Automation and Japanese Companies, Automation and Management, New Applications for Automation, News of Automation Products, Robot Grippers, Robots for the Construction Industry, Robots Worldwide, Smart Robots) B. H. Rudall (UK)	317
Optimum path planning of robot arms, V. Braibant and M. Geradin (Belgium)	323
A structured geometric database in an off-line robot programming system, L. Van Aken and H. Van Brussel (Belgium)	333
Conference News	341
Book Reviews	343
Announcements	351
