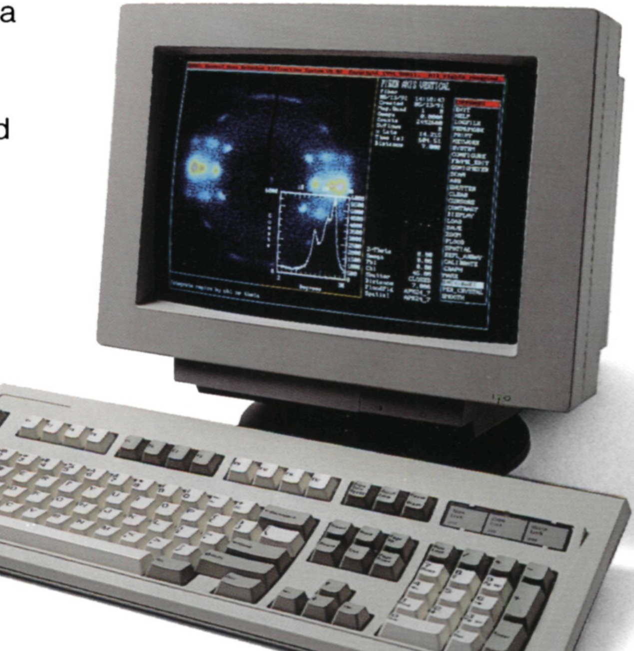
SIEMENS

Finally – A powerful x-ray diffraction system for microanalysis that's flexible, too!

Siemens' HI-STAR area detector with General Area Detector Diffraction System (GADDS) software provides you with a more powerful, faster, and more flexible microdiffraction system than any other commercially available. Combined laser and video sample alignment provides real-time color displays of both the diffraction pattern and the region under investigation. These regions can be selected manually, with "point and shoot" capabilities, or in pre-defined arrays, permitting Diffraction Function Mapping (DFM) studies.



- Ideal for studying very small samples, or micro-defects on large samples.
- Fast data collection with HI-STAR, Siemens' unique 2-dimensional detector technology.
- An optional crossed Göbel mirror system can provide increased x-ray flux, eliminating the need for a rotating anode x-ray source.

Samples

Ranging in size from 10μm to 100mm.

Suitable for investigating plastics, metals, ceramics, geological and forensic samples, semiconductors, superconductors, and more.

Versatility

Measures scattering from amorphous, polycrystalline, and single-crystal materials.

XRD Microprobe

Analysis of single or multi-layer systems, including interfaces.

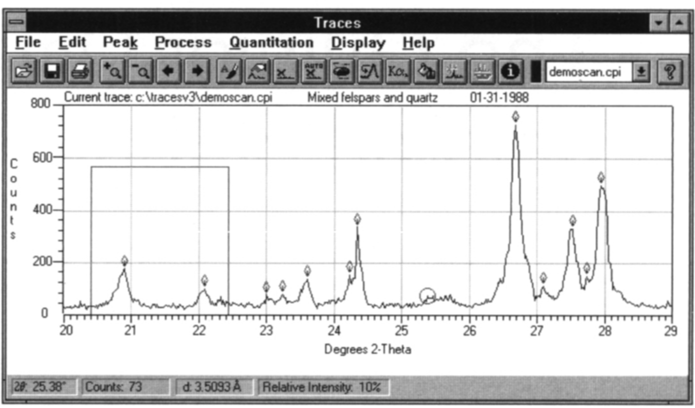
Traces represents the next generation of visual XRD scan processing, providing performance and features never seen before in the industry. Traces facilitates rapid result reporting, allowing you to smoothly progress from sample analysis to report documentation. Traces is the only Windows™ based package that combines advanced XRD scan processing, Search-Match and peak deconvolution in a single application, thereby increasing productivity and reducing training requirements. Features include...

Fast scan display with toolbar and on-line help



- Integrated Search-Match and peak de-convolution.
- Retained Austenite calculations, Indexing and unit cell refinement.
- Manual or automatic peak finding and background removal.
- Report-quality printing on any Windows-compatible printer.
- Measurement of peak area, FWHM and Scherrer crystallite size.
- Display lines from a JCPDS database.
- Subtraction, addition, zero-shifting and trimming of scans.
- Peak area based quantitative routines.

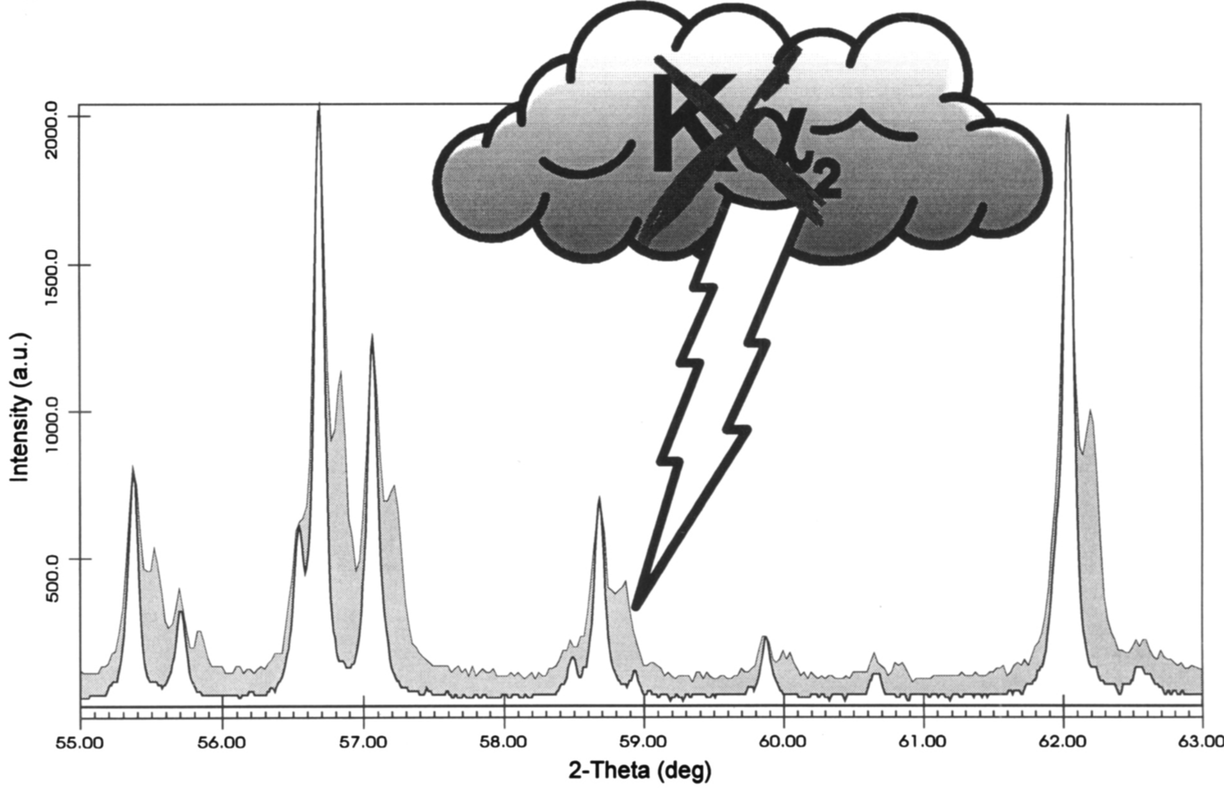
The Guinier Diffractometer G600 gets rid of that bulky



G642: Flat powder samples at room temperature
G644: Quartz capillaries up to 900°C
G645: Flat powder samples from 300 down to 10 K
G653: Flat solid samples at room temperature, grazing incidence angle from 0° to 10°

Software package HUDI: step motor control, data acquisition running directly or in background mode, temperature control, data files binary or ASCII (FORT4 for Rietveld), peak search automatic or manual, 4 profile functions, peak data files.

Program for indexing and least squares refinement of unit cell constants, angle calibration by internal standard, Rietveld program.

AIP Production: Lin Miller, *Editorial Supervisor;*
Andrea Witt, *Journal Coordinator;*
Connie Nedohon, *Senior Production Editor*

Powder Diffraction is a quarterly journal published for the JCPDS-International Centre for Diffraction Data by the American Institute of Physics (AIP). *Powder Diffraction* is a journal of practical technique, publishing articles relating to the widest range of application—from mineral analysis to epitactic growth of thin films and to the latest advances in software. Although practice will be emphasized, theory will not be neglected, especially as its discussion will relate to better understanding of technique.

Submit manuscripts (3 copies) to the most appropriate *Powder Diffraction* Editor listed on this page. The Editors will consider all manuscripts received, but assume no responsibility regarding them. Materials will be returned only when accompanied by appropriate postage. There is no publication charge. See *Powder Diffraction Notes for Authors* for additional information.

Proofs and all correspondence concerning papers in the process of publication should be addressed to: Editorial Supervisor, Powder Diffraction, AIP, 500 Sunnyside Blvd., Woodbury, NY 11797-2999.

For advertising rates and schedules contact AIP Advertising Department. Orders, advertising copy, and offset negatives should be sent to: Advertising Department, American Institute of Physics, 500 Sunnyside Blvd., Woodbury, NY 11797-2999; phone: (516) 576-2440; fax: (516) 576-2481.

Subscription Prices (1995)

	U.S.A & Canada	Mexico, Central & South America	Europe, Mid-East & Africa*	Asia & Oceania*
Individual	$55	$75	$75	$75
Institutional or Library	$95	$95	$95	$95

Subscription rates to Eastern Hemisphere include air freight service.

Back-Number Prices. 1995 single copies: $30. Prior to 1994 single copies: $30.

Subscription, renewals, and address changes should be addressed to *AIP Circulation and Fulfillment Division (CFD), 500 Sunnyside Blvd., Woodbury, NY 11797-2999.* Allow at least six weeks advance notice. For address changes please send both old and new addresses and, if possible, include a mailing label from the wrapper of a recent issue.

Claims, Single Copy Replacement and Back Volumes: Missing issue requests will be honored only if received within six months of publication date (nine months for Australia and Asia). Single copies of a journal may be ordered and back volumes are available in print or microform. Individual subscribers please contact AIP Circulation and Fulfillment Division (CFD) at (516) 576-2288; (800) 344-6901. Institutional or library subscribers please contact AIP Subscriber Services at (516) 576-2270; (800) 344-6902.

Reprint Billing: Contact: AIP Circulation and Fulfillment Division, Woodbury, NY 11797-2999; (516) 576-2234; (800) 576-6909.

Copyright Notice: Authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by AIP, provided that the appropriate fee per page is paid directly to the *Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923.*

The item-fee code for this publication is 0885-7156/94 $6.00.

Permission For Other Use: Permission is granted to quote from the journal with the customary acknowledgment of the source. To reprint a figure, table, or other excerpt requires in addition the consent of one of the original authors and notification to AIP. Reproduction for advertising or promotional purposes, or republication in any form, is permitted only under license from AIP, which will normally require that the permission of one of the authors also be obtained. Direct inquiries to: AIP Office of Rights and Permissions, 500 Sunnyside Blvd., Woodbury, NY 11797-2999.

Document Delivery: For information on obtaining copies of individual articles, contact AIP Circulation and Fulfillment Division, 500 Sunnyside Blvd., Woodbury, NY 11797-2999; phone: (516) 576-2277; (800) 344-6908; fax: (516) 394-9704; E-mail: elecprod@pinet.aip.org.

Powder Diffraction (ISSN: 0885-7156) is published quarterly (4X annually) by the American Institute of Physics for the JCPDS-International Centre for Diffraction Data, 500 Sunnyside Blvd., Woodbury, NY 11797-2999. JCPDS-ICDD principal office: 12 Campus Blvd., Newtown Square, PA 19073-3273. POSTMASTER: Send address changes to *Powder Diffraction*, American Institute of Physics, 500 Sunnyside Blvd., Woodbury, NY 11797-2999. Second class postage rates paid at Woodbury, NY and additional mailing offices.

INTERNATIONAL CENTRE FOR DIFFRACTION DATA
CRYSTALLOGRAPHY SCHOLARSHIP AWARDS

The science of crystallography has played a key role in the development of X-ray diffraction, electron diffraction and neutron diffraction for the elucidation of the atomic structure of matter. Crystallography is an interdisciplinary branch of science taught in departments of physics, chemistry, geology, molecular biology, metallurgy and material science. To encourage promising graduate students to pursue crystallographically-oriented research, the International Centre for Diffraction Data (ICDD) has established a Crystallography Scholarship Fund. While the Ewald Prize is awarded every three years to an internationally recognized crystallographer, little effort has been made by science departments to cultivate aspiring crystallographers. Convinced of the beneficial, scientific impact of the proposed scholarships for crystallographically-oriented research, the ICDD has solicited funds from private and industrial sectors to support this program. The ICDD has awarded in 1992 (2), 1993 (2), 1994 (3) and in 1995 (3). Applications for the 1996 awards must be received by ICDD no later than 31 October 1995.

Qualifications for the applicants: The applicant should be a graduate student seeking a degree with major interest in crystallography e.g. crystal structure analysis, crystal morphology, modulated structures, correlation of atomic structure with physical properties, systematic classification of crystal structures, phase identification and materials characterization. There are no restrictions on country, race, age or sex. The term of the scholarship is one year. Application for one renewal may be made by the recipient at the end of the first year. Because a limited number of scholarships are awarded, renewal applications will be considered on a competitive basis in conjunction with all applications that have been submitted up to the closing date.

Submit:

a. Curriculum Vita.
b. A one-page proposal by the graduate student describing the type of crystallographic research to be partially supported by scholarship.
c. A supportive letter from the sponsoring professor of an accredited university or an institute of technology on institution letterhead.

Restrictions on the scholarship fund:

a. The scholarship stipend of $2,000 is to be used by the graduate student to help defray tuition and laboratory fees. A portion of the stipend may be applied to registration fees to accredited scientific meetings related to crystallography.
b. No more than one scholarship will be awarded to applicants at any one accredited institution per year.
c. The funds of the scholarship are not to be used for travel.

The awarding of the scholarships shall be administered by a committee consisting of the ICDD Chairman, the Chairman of the ICDD Technical Committee, and the Chairman of the ICDD Education Subcommittee. One or more accredited professors (with no conflicts of interest) may be invited to assist in the selection of successful candidates.

Applications must be received by 31 October 1995. Please mail to:

Secretary, International Centre for Diffraction Data
12 Campus Boulevard
Newtown Square, PA 19073-3273 U.S.A.

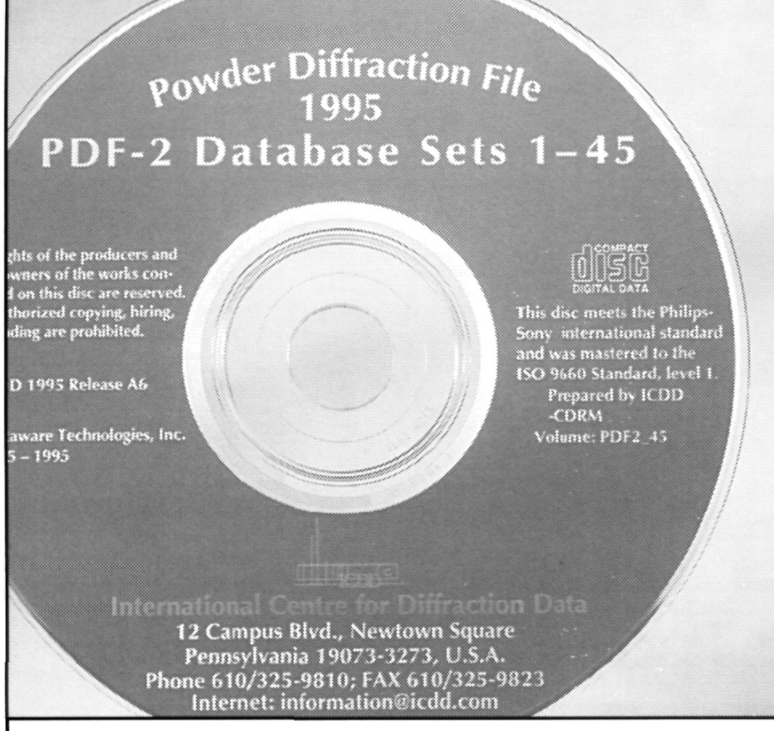
The Source For X-Ray Diffraction Data



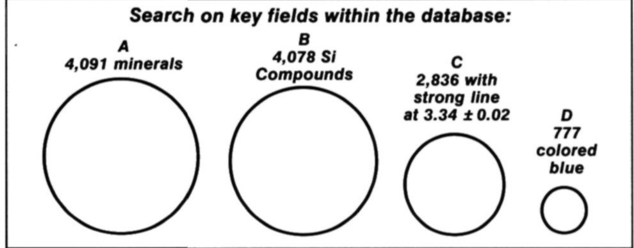
The Powder Diffraction File

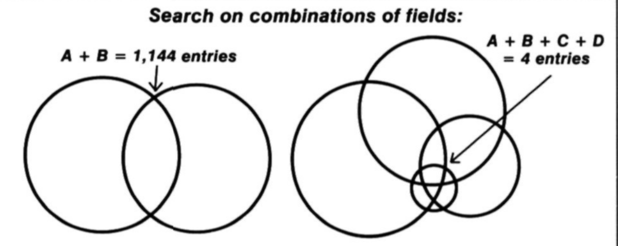
Approximately 62,000 phases in a unique scientific database.

ICDD's high density, data storage/retrieval system uses a personal computer equipped with a CD-ROM drive and a disc which contains the entire PDF-2 database and index files.

A Windows® based retrieval program features speed and flexibility

PCPDFWIN, through use of optimum packing and access algorithms, displays results within seconds. You can, for example:





Other Files, Publications & Services

- *On CD-ROM: NIST Crystal Data File*
- *On magnetic tape or floppy disks:*
  Electron Diffraction Database
- *In print:*

Expand your x-ray diffraction capabilities — not your overhead.

Whether you just need services or your XRD lab is on "overload," IC Laboratories provides every testing service and advanced capability you need in qualitative or quantitative x-ray diffraction analysis — from austenite to zeolites, from air filters to thin films. You are assured of rapid turn-around of results — as little as 48 hours — because IC Labs is one of the most highly automated commercial labs in the U.S., with knowledgeable personnel ready to address all your applications. For a copy of our technical prospectus, contact IC Laboratories.

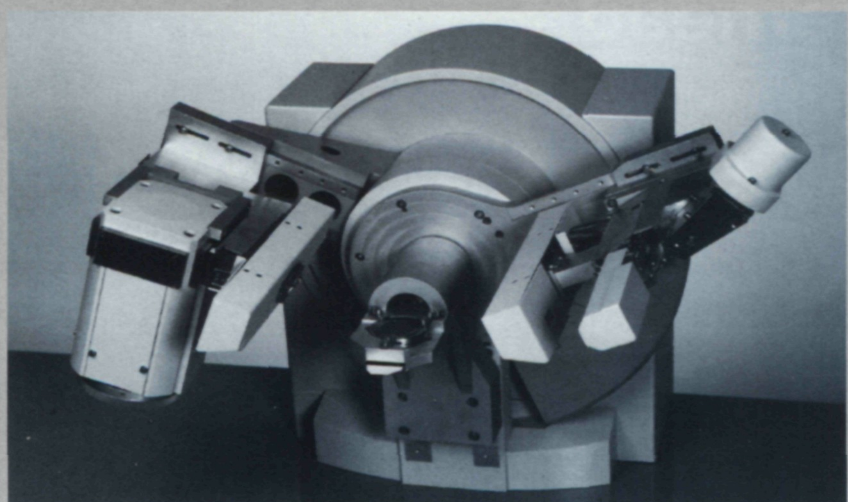
X'Pert-MPD takes the lead in X-ray diffraction

In 1993, Philips introduced the X'Pert-MPD. A rapidly growing number of research and industrial diffractionists now acknowledge X'Pert-MPD as a breakthrough in X-ray diffraction. Thus substantiating our innovative drive and in-depth understanding of polycrystalline XRD analysis. They blend together to make X'Pert-MPD the ideal X-ray diffractometer.

The benefits of X'Pert-MPD are clearly demonstrated in its revolutionary features:

- For accuracy: New goniometer with DOPS optical angle encoding.
- For flexibility: Vertical and horizontal operation in theta/theta and theta/2-theta modes.
- For stability: New, long-life lightweight ceramic X-ray tube.
- For high-quality data: Programmable divergence, anti-scatter and receiving slits.
- For ease of use: Windows software for datacollection and analysis.
- For efficiency: Dual goniometer application clusters with simultaneous operation.
- For versatility: Unique double detector arm.
- For immediate use: Factory aligned system delivery.



X'Pert-MPD covers all polycrystalline XRD areas, including phase, stress, texture, non-ambient and thin film.

We invite you to test our claims. Please contact your local Philips sales office and ask for detailed information or a thorough look inside.
