

K. R. Lang

Astrophysical Formulae

A Compendium for the Physicist and Astrophysicist

Springer Study Edition

1978. 46 figures, 69 tables. XXV, 735 pages
ISBN 3-540-09064-9

Contents:

Continuum Radiation. – Monochromatic (Line) Radiation. – Gas Processes. – Nuclear Astrophysics and High Energy Particles. – Astrometry and Cosmology.

“...For astronomers, teachers and students it represents an important reference source for fundamental formulae used in astrophysics. For a student it may serve as a compact review of a familiar field or a handy aid to gain a rapid insight into the techniques of new fields of astrophysics. For a teacher the *Astrophysical Formulae* will be a useful guide in the very broad field of modern astrophysics... It is a work that everybody from us needs and that will spare much of our time and effort.”

Journal of the British Interplanetary Society

“... an important reference work for any astrophysicist requiring basic information in a field outside his own...”

Nature

“Compendium is a good word for this book. It is a collection of formulae and numerical data linked by brief descriptions; it probably covers most things an astrophysicist would want... There are excellent author and subject indexes. References are in many cases given to original authors as well as modern texts... Altogether this seems a magnificent compendium of which any library should be proud.”

This series reports new developments in physical research and teaching – quickly, informally and at a high level. The type of material considered for publication includes:

1. Preliminary drafts of original papers and monographs
2. Lectures on a new field or presentations of new angles in a classical field
3. Seminar work-outs
4. Reports of meetings, provided they are
 - a) of exceptional interest and
 - b) devoted to a single topic.

The timeliness of a manuscript is more important than its form, which may be unfinished or tentative. Thus, in some instances, proofs may be merely outlined and results presented which have been or will later be published elsewhere. If possible, a subject index should be included. Publication of Lecture Notes is intended as a service to the international physical community, in that a commercial publisher, Springer-Verlag, can offer a wide distribution of documents which would otherwise have a restricted readership. Once published and copyrighted, they may be documented in the scientific literature.

Manuscripts

Manuscripts should be no less than 100 and preferably no more than 500 pages in length.

They are reproduced by a photographic process and therefore must be typed with extreme care. Symbols not on the typewriter should be inserted by hand in indelible black ink. Corrections to the typescript should be made by pasting in the new text or painting out errors with white correction fluid. Authors receive 50 free copies and are free to use the material in other publications. The typescript is reduced slightly in size during reproduction; best results will not be obtained unless the text on any one page is kept within the overall limit of 18 x 26.5 cm (7 x 10½ inches). On request, the publisher will supply special paper with the typing area outlined.

Manuscripts in English, German or French should be sent to Prof. Dr. W. Beiglböck, Institut für Angewandte Mathematik, Im Neuenheimer Feld 5, 6900 Heidelberg/Germany, or directly to Springer-Verlag Heidelberg.
