

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Original Articles

- 1115 GUUS BERKELMANS, SANDJAI BHULAI, ROB VAN DER MEI AND JORIS PRIES. The berkelmans–pries dependency function: a generic measure of dependence between random variables
- 1136 FATEMEH ASGARI AND MOHAMMAD HOSSEIN ALAMATSAZ. Costa’s concavity inequality for dependent variables based on the multivariate Gaussian copula
- 1157 BRIAN CHAO AND JASON SCHWEINSBERG. A spatial mutation model with increasing mutation rates
- 1181 FRANK DEN HOLLANDER AND MAARTEN MARKERING. Breaking of ensemble equivalence for dense random graphs under a single constraint
- 1201 ETIENNE BELLIN. Asymptotic behaviour of the first positions of uniform Parking functions
- 1219 CHRISTOPHER DÖRR AND MARTIN SCHLATHER. Characterization theorems for pseudo cross-variograms
- 1232 KRZYSZTOF BIŚEWSKI. Lower bound for the expected supremum of fractional Brownian motion using coupling
- 1249 YAPING ZHU. A large deviation theorem for a supercritical super-Brownian motion with absorption
- 1275 DENISE UWAMARIYA AND XIANGFENG YANG. Large deviations of extremal eigenvalues of sample covariance matrices
- 1281 XIEQUAN FAN AND QI-MAN SHAO. Self-normalized Cramér moderate deviations for a supercritical Galton–Watson process
- 1293 MATTHIEU SIMON. SIR epidemics driven by Feller processes
- 1317 YUNUS EMRE DEMİRCİ, ÜMIT İŞLAK AND ALPEREN ÖZDEMİR. Mixing time bounds for edge flipping on regular graphs
- 1333 ABDOLSAEED TOOMAJ, MAJID HASHEMPOUR AND NARAYANASWAMY BALAKRISHNAN. Entropy: Characterizations and dynamic versions
- 1352 CARINA BETKEN AND CHRISTOPH THÄLE. Approaching the coupon collector’s problem with group drawings via Stein’s method
- 1367 CRISTIAN F. COLETTI, LUCAS R. DE LIMA, ALEXANDER HINSEN, BENEDIKT JAHNEL AND DANIEL VALESIN. Limiting shape for first-passage percolation models on random geometric graphs
- 1386 VINCENT LIANG AND KONSTANTIN BOROVKOV. On Markov chain approximations for computing boundary crossing probabilities of diffusion processes
- 1416 SHIGEO SHIODA AND DAI KATO. Distribution of consensus in a broadcast-based consensus algorithm with random initial opinions
- 1439 ALEXANDRE GÉNADOT. Averaging for slow–fast piecewise deterministic Markov processes with an attractive boundary
- 1469 TIEN CUONG PHI, EVA LÖCHERBACH AND PATRICIA REYNAUD-BOURET. Kalikow decomposition for counting processes with stochastic intensity and application to simulation algorithms
- 1501 BAYE MATAR KANDJI. Exponential control of the trajectories of iterated function systems with application to semi-strong garch (P, Q) models
- 1516 PETER TAYLOR. Daryl John Daley, 4 April 1939 – 16 April 2023 An internationally acclaimed researcher in applied probability and a gentleman of great kindness
- 1532 GEORGE V. MOUSTAKIDES, XUJUN LIU AND OLGICA MILENKOVIC. Optimal stopping methodology for the secretary problem with random queries – Addendum
