

Ted Pella, Inc.

For over half a century Ted Pella, Inc. has been serving the microscopy community globally with pride and excellence of service, offering a wide ranging product portfolio for our valued customers in science and industry.

We manufacture and sell instruments and supplies worldwide to serve laboratories dedicated to a variety of types of microscopy: Transmission and Scanning Electron Microscopy, Electron Microprobe Analysis, Atomic Force Microscopy, Confocal Laser Microscopy and Light Microscopy. We serve colleges and universities, private companies, hospitals and various branches of government, domestic and international. Our products help customers in a diverse set of fields including: Aerospace, Automotive, Biology, Biotechnology, Chemistry, Chemical Engineering, Energy, Failure Analysis, Food & Beverages, Forensics, Genetics, Histology, Metals/Plastics/Rubber/Materials Science, MEMS, Metallurgy/Metallography, Microelectronics, Nanotechnology, Neurosciences, Pathology, Pharmaceuticals, Photonics, Physics, Semiconductor, Quality Assurance and Failure Analysis.

Among our talented scientific staff are specialists in the field of the life sciences including histology, biological electron microscopy, AFM, ultramicrotomy, and immunogold staining. We also have specialists in materials science experienced in electron microscopy, metallography, optical light microscopy, vacuum coating, grids, holders and calibration standards. Ted Pella, Inc. is recognized as the leader in microwave tissue processing technology and is active in applications development in this area. We continually strive to provide our customers in all of these fields with outstanding products and services.
