

NOTES FOR AUTHORS

Papers to be considered for publication should be sent to the Editorial Secretary, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

In view of the high cost of publication, authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate and preferably should be typewritten on one side of A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. For style of references at end of text, see recent issues of *Proceedings A*.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t., a.e., \forall , \exists , and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Horizontal fraction signs should normally be avoided: use either solidus signs / or negative exponents. Replace $e^{(\dots)}$ by $\exp[\dots]$ if the expression in parenthesis is complicated. Simple formulae should *not* be displayed unless they require a formula number. Use the prime ' or d/dx , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of $\partial/\partial x$ etc. Bars reaching over several letters should be avoided: use $\sqrt{()}$ or the exponent 1/2 for the square root. Sub-subscripts and super-superscripts should be avoided if possible: bars and other devices over indices cannot be supplied.

Note that confusion very often arises between 1 (one) and l (ell); 0 (zero) and O (Capital oh); \circ (composition) and o (lower case oh); x and \times ; U and \cup ; c and \subset ; \in (belongs to) and ϵ (epsilon); \emptyset (empty set) and ϕ (phi); $_1$ and comma ,; prime ' and 1 ; K and κ ; p and ρ ; w and ω ; \sum (summation) and Σ (capital sigma); \prod (product) and Π (capital pi); v (lower case vee) and ν (Greek nu); a (lower case a) and α (Greek alpha); y (lower case y) and γ (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent* of the printers' charge for the setting of a particular paper *will be charged to the author*.

It is the policy of the Royal Society of Edinburgh not to charge any royalty for the production of a single copy of any one article made for private study or research. Requests for the copying or reprinting of any article for any other purpose should be sent to the Royal Society of Edinburgh, 22/24 George Street, Edinburgh EH2 2PQ

CONTENTS

R. GEEL	Linear initial value problems with a singular perturbation of hyperbolic type	167
KURT KREITH	A class of comparison theorems for non-linear hyperbolic initial value problems	189
JOHN S. BRADLEY, DON B. HINTON and ROBERT M. KAUFFMAN	On the minimization of singular quadratic functionals	193
JAGDISH CHANDRA, FRANCIS G. DRESSEL and PAUL DENNIS NORMAN	A monotone method for a system of nonlinear parabolic differential equations	209
W. O. AMREIN and M. WOLLENBERG	On the Lax-Phillips scattering theory	219
H. A. DONEGAN and T. B. M. McMASTER	Concerning the "panneaux" of M. Sova	231
H. S. HASSAN and N. G. LLOYD	On the structure of the set of solutions of certain holomorphic two-point boundary value problems	235
A. R. PRINCE	Finite groups with a certain centralizer of an element of order 3	249
LEE DA-TSIN	Global regularity and formation of singularities of solutions to first order quasilinear hyperbolic systems	255
W. W. STOTHERS	On a result of Petersson concerning the modular group	263
ALLAN M. KRALL	Orthogonal polynomials satisfying fourth order differential equations	271
JOÃO-PAULO DIAS and ALAIN HARAUX	Smoothing effect and asymptotic behaviour for the solutions of a nonlinear time dependent system	289
HANS GRABMÜLLER	A note on linear hyperbolic evolution equations	305
M. THOMPSON	The principle of limiting absorption for Laplacians on two-point homogeneous spaces	319
M. GIERTZ, M. K. KWONG and A. ZETTL	Commuting linear differential expressions	331
G. WILKS and J. S. BRAMLEY	Dual solutions in mixed convection	349
