

Manuscripts on disk

CAB INTERNATIONAL are happy to announce that we are now able to take all accepted manuscripts in electronic form. This development will help us to further reduce the time between acceptance and publication of papers and will also help reduce the incidence of errors associated with re-keying.

Text:

-  Once your paper has been accepted and is in its final form, you should submit it on disk along with the hard-copy printouts which must be identical to the material on disk (it is essential that the printed version is produced directly from the submitted electronic version - any small errors spotted on the printed version may be indicated in ink).
-  Disks must be labelled clearly with the author's name, title of the journal and the short title of the article. We will accept either 3.5" or 5.25" disks prepared on PC or Macintosh applications.
-  Text should be provided using any of the standard word-processing packages, although we do prefer material in Microsoft Word or WordPerfect.
-  Please be consistent throughout your manuscript and use as few formatting codes as possible; however please use the word processor's facilities to indicate bold, italic, subscript and superscript.
-  Please include tables and equations, however due to conversion problems, these may be typeset using your hard copy material.
-  In the event that we are not able to read your disk we will use the hard copy to prepare the article for publication. Where there is a difference between the disk and the hard-copy, the hard-copy will be used as the definitive version.

Figures:

- We would also like line figures to be supplied in electronic form: however we will ALWAYS require hard copy of the illustrations, and these MUST be identical to the electronic files.
- Ideally, we would prefer artwork created in Adobe Illustrator, Aldus Freehand, Chemdraw or CorelDraw (either on Mac or PCs).
- In addition to supplying the figure in the original application, please also supply as a TIFF file (.TIF). If a TIFF file is not possible, save as an EPS file, or a windows metafile (.wmf).
- Photographs should be supplied as set out in the Directions for Contributors in Issue 1. We do not require these electronically.

Editorial

- The fiftieth anniversary of the *British Journal of Nutrition*.
Keith N. Frayn, Ian E. Sambrook & David C. Nicholson 1–2

Technical Note

- Skinfold thicknesses: is there a need to be very precise in their location?
J. V. G. A. Durnin, H. de Bruin & G. I. J. Feunekes 3–7

Human and Clinical Nutrition

- Anthropometric characteristics of healthy Italian nonagenarians and centenarians.
Giovanni Ravaglia, Pietro Morini, Paola Forti, Fabiola Maioli, Federica Boschi, Mauro Bernardi & Giovanni Gasbarrini 9–17
- Fatty acid composition of an oral load affects chylomicron size in human subjects.
Sana W. Sakr, N. Attia, M. Haourigui, J. L. Paul, T. Soni, D. Vacher & A. Girard-Globa 19–31
- Digestive and metabolic effects of potato and maize fibres in human subjects.
C. Cherbut, A.-C. Aube, N. Mekki, C. Dubois, D. Lairon & J.-L. Barry 33–46
- Anaemia is associated with reduced productivity of women workers even in less-physically-strenuous tasks.
Barbara D. Scholz, Rainer Gross, Werner Schultink & Soemilah Sastroamidjojo 47–57
- Vitamin C intake and susceptibility to the common cold.
Harri Hemilä 59–72

Animal Nutrition

- The energy costs of walking on the level and on negative and positive slopes in the Granadina goat (*Capra hircus*).
M. Lachica, the late C. Prieto & J. F. Aguilera 73–81
- Digestion of feed amino acids in the rumen and small intestine of dairy cows measured with nylon-bag techniques.
W. M. van Straalen, J. J. Odinga & W. Mostert 83–97

General Nutrition

- Energy balance and liver respiratory activity in rats fed on an energy-dense diet.
Susanna Iossa, Maria P. Mollica, Lilla Lionetti, Antonio Barletta & Giovanna Liverini 99–105
- Reciprocal responses to dietary diacylglycerol of hepatic enzymes of fatty acid synthesis and oxidation in the rat.
Masakazu Murata, Takashi Ide & Kenji Hara 107–121
- Dietary ascorbic acid raises iron absorption in anaemic rats through enhancing mucosal iron uptake independent of iron solubility in the digesta.
K. J. H. Wienk, J. J. M. Marx, M. Santos, A. G. Lemmens, E. J. Brink, R. Van Der Meer & A. C. Beynen 123–131
- Modulation of paraquat toxicity by β -carotene at low oxygen partial pressure in chicken embryo fibroblasts.
Susan M. Lawlor & Nora M. O'Brien 133–140

- Nutrition Discussion Forum** 141–148
