"The series of Classics . . . are not only extremely interesting, but are of the highest value as enabling the reader to see the history of Aeronautics in true perspective . . . Full of all the romance of great adventure"—*The Field*.

THE

First Report of the Bird Construction Committee, 1911

Compiled by Col. J. D. FULLERTON (late R.E.)

Royal oblong 4to, 61 pp., Illustrations and Plates, 10s. 6d. net.

"An attractive pamphlet in which it is sought to summarise existing knowledge of the mechanical constants associated with the flight of birds. A special feature is the tabulated list of about 460 species of birds with numerical values of their wing dimensions, weights of their muscles and similar data, compiled from the works of Harting, Marey, Mouillard, &c. To the ornithologist the list of Latin names with their equivalents in six languages will be exceedingly useful."—*Nature*.
