

**PASA**  
**Contents    Volume 21    Number 2    2004**  
**The Fifth Workshop on Galactic Chemodynamics**

The Fifth Workshop on Galactic Chemodynamics.

*B. K. Gibson and D. Kawata*

pp. i–ii

Galaxy Genesis — Unravelling the Epoch of Dissipation in the Early Disk.

*J. Bland-Hawthorn and K. C. Freeman*

pp. 110–120

Solar Neighbourhood Age–Metallicity Relation Based on *Hipparcos* Data.

*A. Ibukiyama*

pp. 121–125

Cosmic Helium Production.

*C. Flynn*

pp. 126–128

The Geneva–Copenhagen Survey of the Solar Neighbourhood.

*B. Nordström, J. Andersen, J. Holmberg, B. R. Jørgensen, M. Mayor and F. Pont*

pp. 129–133

Chemical Abundance Patterns of the Galaxy's Thick Disk Population.

*M. M. Brewer and B. W. Carney*

pp. 134–137

Kinematics of the Galactic Bulge from Radial Velocity and Proper Motion Optical Surveys.

*C. Reylé, A. C. Robin, and S. Picaud*

pp. 138–143

Mass to Light Ratio, Initial Mass Function, and Chemical Evolution in Disk Galaxies.

*L. Portinari, J. Sommer-Larsen and R. Tantaló*

pp. 144–147

Cosmic Ray Production of  ${}^6\text{Li}$  by Virialisation Shocks in the Early Milky Way.

*T. K. Suzuki and S. Inoue*

pp. 148–152

Photometric Properties of White Dwarf Dominated Halos.

*H.-c. Lee, B. K. Gibson, Y. Fenner, C. B. Brook, D. Kawata, A. Renda, J. Holopainen and C. Flynn*

pp. 153–156

Dynamical and Chemical Evolution of IZw18.

*S. Recchi*

pp. 157–160

Constraints on the Astrophysical Nature of r-process Nucleosynthesis Sites from Inhomogeneous Chemical Evolution Models.

*D. Argast and M. Samland*

pp. 161–166

Star Clusters and Galactic Chemodynamics: Implosive Formation of Super Star Clusters.

*K. Bekki*

pp. 167–170

Initial Model Catalogue for the Galaxy Evolution.

*N. Nakasato*

pp. 171–174

A Model for the Formation of the Milky Way.

*M. Samland*

pp. 175–178

Can Dust Destabilise Galactic Disks?

*Ch. Theis and N. Orlova*

pp. 179–182

Chemodynamical Evolution of Elliptical Galaxies: Metallicity Gradients and Scaling Relations.

*C. Kobayashi*

pp. 183–187

Physical Processes in Star–Gas Systems.

*R. Spurzem, P. Berczik, G. Hensler, Ch. Theis, P. Amaro-Seoane, M. Freitag and A. Just*

pp. 188–191

Studying Galactic Chemical Properties by using Cosmological Numerical Simulations.

*P. B. Tissera and C. Scannapieco*

pp. 192–196

Substructure in the Galactic Halo.

*S. R. Majewski*

pp. 197–202

The Andromeda Stream.

*G. F. Lewis, R. A. Ibata, S. C. Chapman, A. M. N. Ferguson, A. W. McConnachie, M. J. Irwin and N.*

*Tanvir*

pp. 203–206

Physical Parameters of SDSS Stars, the Nature of the SDSS ‘Ring Around the Galaxy’, and the SEGUE Project.

*T. C. Beers, C. Allende Prieto, R. Wilhelm, B. Yanny and H. Newberg*

pp. 207–211

On the Shape of the Galactic Dark Matter Halo.

*A. Helmi*

pp. 212–215

Interactions of Satellite Galaxies in Cosmological Dark Matter Halos.

*A. Knebe, S. P. D. Gill and B. K. Gibson*

pp. 216–221

High-Resolution *N*-body Simulations of Galactic Cannibalism: The Magellanic Stream.

*T. W. Connors, D. Kawata, S. T. Maddison and B. K. Gibson*

pp. 222–227

Modelling Galaxies with a 3D Multi-Phase ISM.

*S. Harfst, Ch. Theis and G. Hensler*

pp. 228–231

Multiple Supernova Explosions in a Forming Galaxy.

*M. Mori, M. Umemura and A. Ferrara*

pp. 232–236

On the Kinematics of Tidal Debris from Omega Cen's Progenitor Galaxy.

*M. Chiba and A. Mizutani*

pp. 237–241

Observed Abundance Features and their Implications for Chemical Evolution.

*T. Tsujimoto and T. Shigeyama*

pp. 242–247
