43% of probecovers are contaminated before use:

Minimize risks with the Tempa•DOT® Single-Use Clinical Thermometer System

Sterile

Disposable, single-use Tempa•DOT Thermometers provide an unsurpassed degree of safety for your patients, affording a decisive advantage over other temperature measurement systems. Each sterile Tempa•DOT Thermometer is used only once and then discarded—minimizing the risk of passing harmful microorganisms from one patient to another. The specially-designed peel-down package assures that a new, clean thermometer is used each and every time.

Accurate

Tempa•DOT Thermometers incorporate 45 individual thermometer “dots,” each one calibrated to change color at a specific temperature. This innovative thermometric technology provides consistently exact readings. With millions in use each year, Tempa•DOT Thermometers are the choice of prestigious hospitals and organizations across the country.

Fast

Tempa•DOT Thermometers give oral readings in just 60 seconds! Since there's no need to hold the thermometer, the nurse is free to take other vital signs simultaneously, maximizing efficient patient care. Tempa•DOT Thermometers—in individual, easy-to-open, sterile packages—are *always* available,

Versatile

Used throughout your institution, Tempa•DOT Thermometers—in Fahrenheit or Celsius versions—eliminate the need for backup systems. Soft, flexible, nontoxic Tempa•DOT Thermometers are perfect for oral and axillary use, even with newborns and children. For rectal temperature measurement, try disposable Tempa•DOT PLUS Thermometers.

Economical

Tempa•DOT Single-Use Clinical Thermometers enhance patient safety and clinical efficiency—yet cost no more than other systems.

Tempa•DOT Thermometers provide economy by eliminating glass and electronic thermometer maintenance, cleaning, and replacement costs. And sterile Tempa•DOT Thermometers may reduce the incidence of extended hospital stays due to thermometer-acquired infections.

I. Smith, Leon; Prince, Herbert N.; Johnson, Edward: Bacteriologic Studies on Electronic Hospital Thermometers: Infection Control 1981; Vol. 2, No. 4: p. 316

For a free Tempa•DOT
Thermometer trial, call
1-800-526-3538.

(In New Jersey, call 908-526-1222)

SOME PEOPLE TAKE DRUG ABUSE TO HEART.

Most cocaine users are so dedicated to the drug that what it does to their hearts never enters their minds. They don't realize that every time they use cocaine, they put themselves at risk for such potentially fatal cardiovascular complications as hypertensive crisis... myocarditis... myocardial infarction... ventricular tachycardia... ventricular fibrillation... even cardiac arrest.

Chances are, at least some of these people are your patients. And many of them may feel more comfort-

able telling a nurse what they can't-or won't-tell a doctor. That's why your role becomes critical in helping suspected drug abusers understand what illegal drug use does to their bodies.

As key members of the health care team, nurses can make a difference in helping to curb drug abuse, and in preventing some of its deadliest consequences. The next time you suspect a patient may be using cocaine-or any

illegal substance—have a heart-to-heart talk about the damage these drugs can do.

**A short talk
can go a long way.**

WE'VE MAGNIFIED THE PROBLEMS OF NEEDLESTICK INJURIES TO MAKE A POINT.

AIDS VIRUS

HEPATITIS B VIRUS

**THE PROTECTIV™
I.V. CATHETER SAFETY SYSTEM**
Call and request a free copy of the informational brochure "The Implications Of Needlesticks":
*Dollar figures taken from different studies.
References available upon request.

It's not a pretty picture. The risks of your healthcare workers contracting Hepatitis B or AIDS from a needlestick injury are greater than ever. And so is the cost of treatment.

Consider that in 1981, before AIDS was recognized, the cost of treating a healthcare worker exposed to a blood-borne disease averaged about \$57. Today, the cost is over \$1,500.

And that's just for the medical treatment. There are also indirect costs to consider.

The cost of lost workdays. Of reduced productivity due to psychological stress. Of recruitment. Not to mention the possibility of OSHA fines, effects on insurance, and legal implications.

Fortunately, there is a way to virtually eliminate the risk of accidental needlesticks from I.V. catheters before they occur. With the new PROTECTIV™ I.V. Catheter Safety System.

YOUR BEST DEFENSE IN THE WAR AGAINST NEEDLESTICKS.

The PROTECTIV I.V. Catheter Safety System offers needlestick protection during and after use. The catheter contains a protective guard that glides over the contaminated needle. A reassuring "click" lets the user know when the needle is locked safely inside the guard.

THE PROTECTIV™ SAFETY SYSTEM. THE POINT OF MAXIMUM PROTECTION. Protect your employees by turning your hospital into a protective environment. Encourage your Infection Control

Supervisor to call Critikon for a free cost/benefit analysis today. And make the financial risk of needlestick injuries disappear.
