EASTERN ARCTIC PREHISTORY: PALEOESKIMO PROBLEMS

Eastern Arctic Prehistory: Paleoeskimo Problems, Memoir 31 of the Society for American Archaeology, edited by Moreau S. Maxwell, is now available.

Because of the Arctic's environmental constraints and the necessarily limited scope of human biocultural adaptive response, much can be learned there about general cultural processes and systems, at least among hunters, from data not available in more temperate regions. But Arctic study by its nature tends to be isolative. Unlike their colleagues to the south, researchers cannot jump in a car and visit a site where a fellow archaeologist is recovering similar data, and the opportunity for intellectual interchange at meetings is all too short. *Eastern Arctic Prehistory* is the product of a unique opportunity for ten well-known "chopped-hand" archaeologists to steep themselves for a full week in joint discussion seeking understanding of the processes of human behavior through pursuit of those whom modern Inuit call Tunit.

Contributions by Robert McGhee, James A. Tuck, Guy Mary-Rousselière, Moreau S. Maxwell, Albert A. Dekin, Jr., William Fitzhugh, Elmer Harp, Jr., and Ronald J. Nash call into question "the whole temporal matrix on which we base our interpretations of change, contact, and diffusion," and the simplicity of a former model of culture contact between Dorset and Thule, suggest previously unsuspected nexi linking marginal peoples, and point interesting new directions for the pursuit of arctic prehistory.

Please note that Memoirs of the Society are no longer distributed as a benefit of membership. Cost per copy is \$3.00 to members, \$5.00 to non-members. Address orders, enclosing payment, to the Society, 1703 New Hampshire Ave., N.W., Washington, D.C. 20009.

Hunter-Gatherer Subsistence and Settlement

by MICHAEL A. JOCHIM

A Volume in the STUDIES IN ARCHEOLOGY Series

This book offers significant new insight into the economic behavior of hunters and gatherers. The author approaches the study of prehistoric artifacts by means of a predictive model based on archeological as well as ethnographic data. This unique model—representative of contemporary anthropological views—constitutes a number of explicit assumptions founded upon observed regularities among diverse ethnographic groups. From its construction evolves a useful set of predictions about the nature of a hunting and gathering economy in a particular environment. Applying his model to various ethnographic groups with considerable success, the author demonstrates the widespread implications this model will generate for the archeological record.

Cultural Change and Continuity

Essays in Honor of James Bennett Griffin

edited by CHARLES E. CLELAND

A Volume in the STUDIES IN ARCHEOLOGY Series

From the Preface:

"...The first part, 'Considerations of Variability in the Archeological Record,' presents chapters by Brose, Jelinek, Speth and Johnson, and Spaulding. . . .

"Part II, 'Patterns of Culture History,' offers a wide variety of papers. MacNeish revisits the Iroquois, Frison examines the Paleo-Indian occupation of the Big Horn Basin in Wyoming, Newcomb traces the development of Pecos River rock art, and both Rolingson and Chapman, perhaps with some temerity, present papers on the Mississippian. . . .

"In the next part, 'Patterns of Meso-american Urbanism,' Flannery and Marcus, Blanton, and Parsons discuss subjects geographically and culturally distant from the region of his own professional specialization. . . .

"Yarnell, Smith, and Wright and Miller present chapters in Part IV, 'Biotic Considerations in Prehistoric Adaptation'. . . ."

Behavioral Archeology

by MICHAEL B. SCHIFFER

A Volume in the STUDIES IN ARCHEOLOGY Series

Behavioral Archeology is a methodological study of broad scope, covering the nature of archeological remains and the ways of reconstructing past human behavior from those remains. Its primary emphasis concerns the need for formulating, testing, and employing archeological laws. The book demonstrates how the diverse activities of modern archeology, such as experimentation, ethnoarcheology, computer simulations, modern garbage studies, and more traditional interests, fit together into a coherent enterprise bound by the pursuit and use of general principles. The author has applied his general framework, with particular emphasis on the laws of cultural formation processes of the archeological record, to the study of chipped-stone artifacts from the Joint Site, a Pueblo III ruin in eastern Arizona.

Method and Theory in Historical Archeology

by STANLEY SOUTH

A Volume in the STUDIES IN ARCHEOLOGY Series

From the Foreword by Lewis R. Binford:

Rarely is a book published that is more than of passing interest. This is one of the rare ones in that it is the first systematic comparative study of archaeological data relative to the historic period in North America. Additionally it is a book with vision, it looks beyond the data and comparative material presented, to the advancement of archaeological science. It is much more, however, than a polemic-laden thesis. It is solidly based in the use of empirical material and it is modest in that while looking beyond the materials and specific arguments presented it does not attempt to go beyond the current state of the field; instead it is concerned with building a sound research foundation for envisioned progress in science.
