

angles the sines of which when multiplied by the cosine of the angle abreast of it in the extreme left-hand column give the product to be found at the top of the column.

The arrangement of the table is ingenious; and, with but little practice, it may be used with ease. The author describes two ways of using the table; but it is significant that he makes no reference to a position line, which is the essential feature of every astro-navigational problem.

Charles H. Cotter

CAPTAIN F. J. WYLIE, R.N.

CAPTAIN F. J. Wylie, R.N., a late President of the Institute, has been elected an Honorary Member of the French Institute of Navigation. In their citation, the Council of the French Institute refer to their appreciation of Captain Wylie's great services rendered internationally to navigation, and to his ready cooperation with their Institute on so many occasions.
