All Scientists Now

The Royal Society in the Nineteenth Century

MARIE BOAS HALL

Dr Hall has meticulously researched this fascinating period using the Royal Society's own records and presents here the first full-length account on the subject. The Society was originally a leisurely club for scholars, politicians and the patrons of science and learning, as well as the scientists themselves, and the book should hold similar interest for social historians and historians of science.

"Her book is the one to consult for lucid, archive-based discussion of topics such as the succession of presidents, the award of the Society's medals, its sponsorship of transoceanic exploration, or its role as government scientific expert..."

Roy Porter, *Times Literary Supplement*

"Altogether, Hall leads us skilfully through the 19th-century reorganisation of the Royal Society, which is, itself, an epitome of the reshaping of British science into its modern form."

Jack Meadows, *New Scientist*

Transformation and Tradition in the Sciences

Essays in Honor of I. Bernard Cohen

Edited by EVERETT MENDELSON

These twenty-seven original essays in honour of I. Bernard Cohen reflect a wide range of current work in the history of science. The essays represent a number of different approaches, but are unified in their relationship to paths first indicated and explored by Professor Cohen. The volume is divided into four parts: the history and philosophy of the exact sciences and mathematics; the eighteenth-century tradition; science in America; and scientific ideas in their cultural tradition.

Science and the Enlightenment

THOMAS L. HANKINS

This is a much-needed, non-technical general history of eighteenth-century science covering both the physical and the life sciences. It places the scientific developments of the century in the cultural context of the Enlightenment and reveals the extent to which scientific ideas permeated the thought of the age. In particular it describes how science was organized into fields that were quite different from those we know today.
