

## Information for Contributors

1. Manuscripts must be written in English. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Associate Editor or the Editor.
2. The typescript should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.
3. The title and section headings should highlight the significant points. A short abstract should precede the main text.
4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.
5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy.
6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables.
7. References should be cited in the text, according to the Harvard (Author/date system), but giving the last name of the author(s) followed by a comma and the year of publication e.g. DICKEN & LLOYD 1979; FLETCHER 1978. If there is more than one work by an author in a given year, then label them alphabetically within each year, e.g. HALL, 1967a. The full references should be typed, *double-spaced*, on a separate sheet of paper at the end of the article. They must include the names and initials of all the authors, the year of publication, the full title of the article (or book), the standard abbreviated name of the journal.  
SHEERIN, J. P. & ONG, R. S. B. 1980 *J. Plasma Phys.* 24, 157.  
WHITTAKER, E. T. & WATSON, G. N. 1962 *A Course of Modern Analysis*, p. 36. Cambridge University Press, Cambridge.
8. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

# LASER AND PARTICLE BEAMS

Volume 1 Part 2 May 1983

## CONTENTS

- G. W. Kentwell:** Conical two dimensional plasma acceleration at resonance absorption 107
- M. Tamba, N. Nagata, S. Kawata and K. Niu:** Analysis of target implosion on irradiation by proton beams I. Beam interaction with target plasma 121
- H. Hora:** Electrostatic fields and charged particle acceleration in laser produced plasmas 151
- G. J. Tallents:** Two-dimensional ion emission from laser-produced plasmas 171
- N. F. Roderick, B. J. Kohn, W. F. McCullough, C. W. Beason, J. A. Lupo, J. D. Letterio, D. A. Kloc and T. W. Hussey:** Theoretical modeling of electromagnetically imploded plasma liners 181
- R. Petr and M. Gundersen:** Field emission cathode for high power beams 207
- Conference report 211**
- Book Reviews 215**

## FORTHCOMING PAPERS

- P. Mulser and H. Schnabl:** Excitation of large amplitude electron plasma waves by laser
- M. M. Novak:** Electromagnetic waves in a high density field
- J. A. Kunc, S. Guha and M. A. Gundersen:** A fundamental theory of high power thyratrons for high power laser and beam applications I. The electron temperature
- J. G. Linhart:** Energy transfer in inertial confinement
- Wang Runwen:** Instabilities of bounded plane plasma irradiated by a high intensity laser beam
- D. Subbarao and A. K. Ghatak:** Wave optical theory for fast self-focusing of laser beams in plasmas
- P. Lalouis and H. Hora:** First direct electron and ion fluid computation of high electrostatic fields in dense inhomogeneous plasmas with subsequent nonlinear laser interaction
- J. Handke, S. A. H. Rizoi and B. Kronast:** A laser plasma interaction model for the conditions of stimulated brillouin backscattering model experiments
