THE SCHIZOPHRENIC SYNDROME

Edited by Leopold Bellak, M.D.
and Laurence Loeb, M.D.

A thoughtful and thorough study of schizophrenia—a disorder that still causes its victims to occupy one out of four hospital beds in the nation at any given time. The book progresses from a comprehensive review of the relevant literature to an in-depth analysis of what the accumulated information seems to add up to. Drawing from thousands of clinical studies and research findings, the status of every clinical, therapeutic, and diagnostic method is defined and illuminated. Aetiological and pathogenic theories are covered in chapters on general, biological, biochemical, neurophysiological and sociocultural aspects of schizophrenia. A highly practical book and a rich source of reference. (800 pages, approx. \$20.00)

MODERN PSYCHOANALYSIS OF THE SCHIZOPHRENIC PATIENT

By Hyman Spotnitz, M.D.

This new work is designed to serve as a theoretical guide to the management of ambulatory cases of schizophrenia and to facilitate understanding of their outcome. The author presents a specific working hypothesis, supplemented with clinical illustrations, for the treatment of the schizophrenic patient. A substantial contribution to the development of a systematic approach to therapy of the preoedipal disorders and to the establishment of a sound theoretical basis for extensions of the basic model technique. (240 pages, \$7.75)

SELECTED PAPERS OF EDMUND BERGLER

By Edmund Bergler, M.D.

A collection of those papers considered most significant and representative of the late Dr. Bergler's theories and practice, as well as those directly related to current problems of mental health. In an uneasy world, the noted psychoanalyst's warnings of the dangers of psychic masochism have proved to be of growing relevance, and the clinical applications of his concepts continue to reap tangible benefits. This is a major contribution of both theoretical and clinical importance, covering a wide range of human problems. (Approx. 970 pages, \$9.75)

THE TREATMENT OF FAMILIES IN CRISIS

By Donald G. Langsley, M.D.
and David M. Kaplan, Ph.D.

The purpose of this volume is to describe the techniques for treatment and to elaborate on the various aspects of working with 186 families in crisis. The project, at Colorado Psychiatric Hospital, consisted of baseline evaluations of both experimental and control families, with follow-up measures to test the results. It includes measurement of individual patient functioning, family crisis and crisis management, before and after treatment, family role delineation and performance, together with independent clinical evaluations. Major emphasis is placed on detailed studies which illustrate the specific techniques utilized. (208 pages, \$7.50)

NEW DIRECTIONS IN MENTAL HEALTH

In two volumes

Edited by Bernard F. Riess, Ph.D.

In Volume I, new findings, methods and approaches are presented aimed at the improvement of the state of mental health in the individual and in the community. These contributions, international in scope and variety, comprise a distillation of the latest thinking in the field. Volume II is a compilation of Dr. Emanuel K. Schwartz's most significant papers which provide thorough coverage of the various aspects of community mental health and psychoanalytic psychotherapy. (Vol. I—320 pages, \$7.50; Vol. II—432 pages, \$7.50)

PROGRESS IN CLINICAL PSYCHOLOGY

Volume VIII: Dreams and Dreaming

Edited by Lawrence Abt, Ph.D.
and Bernard F. Riess, Ph.D.

The latest volume in this series focuses on the fascinating and little known area of dreams and dreaming. Using an interdisciplinary approach, the book examines both areas systematically and thoroughly. Opening chapters deal with sleep—measurement, deprivation, performance tests, personality adjustments, disorders in children. The second and main part of the book is concerned with specific aspects of dreams and dreaming, and also delineates areas for further research and study. (200 pages, \$9.75)
