THE INTERNATIONAL JOURNAL OF NAUTICAL ARCHAEOLOGY AND UNDERWATER EXPLORATION

edited by JOAN DU PLAT TAYLOR

This journal draws upon the combined research of archaeology, geology, ecology, oceanography, and history to present an interdisciplinary approach to the study of every facet of underwater exploration. The journal includes papers dealing with such topics as: ancient ships, sailors, harbors, artifacts and cargoes; trade routes; ancient sealevels; and every aspect of our four thousand-year-old shipbuilding tradition.

METHODS OF PHYSICAL EXAMINATION IN ARCHAEOLOGY

by M. S. TITE

A Volume in the STUDIES IN ARCHAEOLOGICAL SCIENCE Series

Here is a complete handbook of physical techniques now employed in the study of archaeology for the professional and amateur archaeologist. It provides explanations on geophysical prospecting methods suitable for locating buried features on archaeological sites. These are followed by comments on physical methods of age determination and an examination of absolute dating methods based on radioactive decay—radiocarbon, potassium-argon and thermoluminescence dating. Finally, it describes techniques employed in the examination of archaeological artifacts—e.g., electron and optical microscopy and physical methods of chemical analysis. In addition, the book discusses the type of information on the trading relationships and technological developments in antiquity which can be gained from these techniques.

DATING METHODS IN ARCHAEOLOGY

by JOSEPH W. MICHELS

A Volume in the STUDIES IN ARCHEOLOGY Series

This volume offers an up-to-date, *comprehensive* treatment of the principal methods, techniques, and strategies of archaeological dating. The author takes the reader step by step from the initial phase of sample recovery to the final determination of age, covering such basic techniques as archaeological phasing, relative dating, and chronometric dating. He presents a detailed description of each method or technique—covering the underlying scientific principles, laboratory procedures, instrumentation, and archaeological applications. He reviews the assets and liabilities of each method, and shows the reader how to determine the accuracy and reliability of his results. Each chapter includes an extensive list of references for the reader who wishes to delve further into a particular method.

VARIATION IN
ANTHROPOLOGY
Essays in Honor of
John C. McGregor

Edited by Donald W. Lathrap and
Jody Douglas

The retirement of Professor McGregor from the University of Illinois, Urbana faculty has occasioned the publication of a book of archaeological and ethnological essays in his honor by students and colleagues. The essays concentrate on aspects of agricultural systems in Lowland South America, Eastern United States, Mexico, and South Africa. Individual contributors are William Y. Adams, William L. Allen, David A. Baerreis, Robert E. Bell, Charles E. Bolian, Brian M. Fagan, William M. Gardner, Donald W. Lathrap, Oscar Lewis, Richard S. MacNeish, William J. Mayer-Oakes, Patrick J. Munson, Thomas P. Myers, James B. Richardson III, William H. Sears, Stuart Struever, Joan H. de Tizon, and Milford H. Wolpoff.

"This festschrift not only does honor to an outstanding anthropologist, but is an important contribution to the literature in its own right. An outstanding collection of original papers, which will be of value and interest to students as well as professional investigators. I recommend it highly as a source of up-to-date information on some of the most active current studies in prehistory."

John Pfeiffer

"There is richness in this "variation" – a collection of 17 essays and articles. They are primarily archaeological although ethnology-social anthropology and biological anthropology (human evolution) are represented. Archaeologists will be attracted and stimulated by the theoretical and methodological slant of nearly all of the papers which are, as well, formidably substantive. Settings include North, Middle, and South America and Africa as well. It is a nice volume to show the many directions in which present-day archaeologists are moving in their research. It could serve well as supplementary reading in an advanced course in archaeological method and theory, and it is also a book to be prized for one's own library shelf."
