# Geomorphology in the Anthropocene

Andrew S. Goudie and Heather A. Viles

“Among contemporary physical geographers, there are none who are the equal of Andrew Goudie and Heather Viles in their ability to synthesize vast areas of the literature and to bring out new meanings from the avalanche of data that is published each week ... This is the first book that explores, in depth, the relation between the Anthropocene epoch and landscape science (geomorphology) ... [It] can be recommended to any serious student of the global implications of human modification of Earth's surface ... [as well as to the] geoscience and environmental science communities, from geographers to geologists and geophysicists.”

**Olav Slaymaker**, *University of British Columbia*

“What an interesting topic! What a good book! It presents the geomorphological evidence for the concept of the Anthropocene ... Breathtaking in scope, it also gives a fine account of geomorphological processes and landforms linked to human achievements.”

**Denys Brunsten**, *King's College London*

“In this comprehensive examination of human impacts on diverse landscapes, Goudie and Viles provide numerous examples and details of how human activities have altered and continue to alter Earth's surface.”

**Ellen Wohl**, *Colorado State University*

“In today's climate of media-induced alarm about what mankind is doing to our planet, this book stands out as a calm and considered appraisal of human impacts on Earth resources and natural systems.”

**Michael Crozier**, *Victoria University of Wellington*

- The Anthropocene has become a hot topic in the last decade or so and the relationship between geomorphology and the Anthropocene needs to be explored
- Provides a new focus for the field of geomorphology, helping to stimulate further research paths
- Links geomorphology to major environmental issues and human concerns, such as future climate change, illustrating the value of this discipline

Covering all major aspects of geomorphology, this book is ideal for undergraduate and graduate students studying geomorphology, environmental science and physical geography, and for all researchers of geomorphology.

# GEOLOGICAL MAGAZINE

## CONTENTS

### ORIGINAL ARTICLES

**Perspectives on Cretaceous Gondwana break-up from detrital zircon provenance of southern Zealandia sandstones**

C. J. Adams, H. J. Campbell, N. Mortimer & W. L. Griffin 661–682

**Ordovician reef and mound evolution: the Baltoscandian picture**

Björn Kröger, Linda Hints & Oliver Lehnert 683–706

**Insights into a million-year-scale Rhenohercynian carbonate platform evolution through a multi-disciplinary approach: example of a Givetian carbonate record from Belgium**

D. Pas, A. C. Da Silva, X. Devleeschouwer, D. De Vleeschouwer, P. Cornet, C. Labaye & F. Boulvain 707–739

**Ignimbrite correlation using whole-rock geochemistry: an example from the Sulcis (SW Sardinia, Italy)**

Guillem Gisbert & Domingo Gimeno 740–756

**U–Pb geochronology of bentonites from the Upper Cretaceous Kanguk Formation, Sverdrup Basin, Arctic Canada: constraints on sedimentation rates, biostratigraphic correlations and the late magmatic history of the High Arctic Large Igneous Province**

William J. Davis, Claudia J. Schröder-Adams, Jennifer M. Galloway, Jens O. Herrle & Adam T. Pughll 757–776

**The Lower Jurassic Hanson Formation of the Transantarctic Mountains: implications for the Antarctic sector of the Gondwana plate margin**

D. H. Elliot, D. Larsen, C. M. Fanning, T. H. Fleming & J. D. Verwoort 777–803

**Provenance of volcanoclastic beach sand in a magmatic-arc setting: an example from Lipari island (Aeolian archipelago, Tyrrhenian Sea)**

Consuele Morrone, Rosanna De Rosa, Emilia Le Pera & Kathleen M. Marsaglia 804–828

**Coral faunal turnover through the Ordovician–Silurian transition in South China and its global implications for carbonate stratigraphy and macroevolution**

Guangxu Wang, Renbin Zhan, Bing Huang & Ian G. Percival 829–836

**The first ophthalmosaurid ichthyosaur from the Upper Jurassic of the Umbrian–Marchean Apennines (Marche, Central Italy)**

Ilaria Paparella, Erin E. Maxwell, Angelo Cipriani, Scilla Roncace & Michael W. Caldwell 837–858

**Earth's oldest jellyfish strandings: a unique taphonomic window or just another day at the beach?**

Aaron D. Sappenfield, Lidya G. Tarhan & Mary L. Droser 859–874

**Tectonic evolution and stress pattern of South Wagad Fault at the Kachchh Rift Basin in western India**

G. C. Kothiyari, R. K. Dumka, A. P. Singh, G. Chauhan, M. G. Thakkar & S. K. Biswas 875–887

**Conodonts across the Devonian/Carboniferous boundary: a review and implication for the redefinition of the boundary and a proposal for an updated conodont zonation**

Carlo Corradini, Claudia Spalletta, Angelo Mossoni, Hanna Matyja & D. Jeffrey Over 888–902

### RAPID COMMUNICATIONS

**A revised model for the crustal structure of the SW Grenville Province, Ontario, Canada**

Alan Dickin, Jacob Strong, Gabriel Arcuri, Annika Van Kessel & Lucia Krivankova-Smal 903–913

**Dinosaur footprints in the Early Jurassic of Patagonia (Marifil Volcanic Complex, Argentina): biochronological and palaeobiogeographical inferences**

Ignacio Díaz-Martínez, Santiago N. González & Silvina De Valais 914–922
