

The author experimented on one hundred patients with presumably healthy antra, with the following results :—

Illumination of infra-orbital region good in 54 per cent., moderate or poor in 37 per cent., absent in at most 9 per cent. Illumination of pupils, 74 per cent. (Note.—There were examined 54 women, 21 children, 25 men.) Subjective perception of light was present in almost all cases.

The illumination of the nasal wall and inferior turbinal is not considered of much use.

Chapter IV. consists of a short description of twenty-four acute and twenty-one chronic cases of empyema, regarded from the transillumination point of view. They prove the value of transillumination not only as a means of diagnosis, but also as an indication of the cure or the recurrence of the disease. The latter points, however, are more fully dealt with in the following chapters. There the author points out the fact that the darkness on the diseased side is caused not by the pus alone, but by the hyperæmia, infiltration, and thickening of the walls. Therefore, if for any reason there is no pus in the antrum at the time of examination, the diseased side still remains dark, and will not be lighted till up the disease is cured. Syringing, blowing through, or aspirating the cavity may give a negative result when first tried, and consequently have to be repeated before a conclusion is justified; and in some cases it is possible that by this process an antrum previously healthy may be infected. These proceedings, therefore, ought not to be resorted to except in cases where there are good grounds for suspecting the presence of empyema. On the other hand, transillumination can do no harm at all, and, if freely used, sometimes shows the presence of a quite unsuspected "latent" empyema.

The author, however, does not claim for transillumination absolute certainty, either positive or negative, but considers it a valuable aid to the diagnosis of empyema of the antrum. *Arthur J. Hutchison.*

NEW INSTRUMENTS. ETC.

THE "SUN" POCKET STOVE. (D. Blair & Co., 4, Croydon Street, London, N.W.)

This little contrivance, which we have carefully tested for some time, fully answers its warranty; and we warmly recommend it to our readers. It is an elegant German silver ovoid case, into which is placed a lighted cylinder of patent fuel, which, in a very short time, heats the stove sufficiently to act as a delightful and efficient radiator; and one is not sorry to be able to suspend it by a safety pin and chain attached for the purpose. This little stove is not only a great personal comfort—to keep one's hands or back warm—but can have a respirator attached, so that warmed air can be inhaled; and the stove itself can be used for the local application of heat in neuralgia of any part of the body, or may supersede a mustard plaster to the throat or chest. The fuel is remarkably cheap: 2s. 6d. per hundred refills.

“WATER PRESSURE ACCUMULATOR”
CONTINUOUS SYRINGE.

(Meyer & Meltzer, 71, Great Portland Street, W.)

In our July issue it was stated that these accumulators, as they are called, were being adapted to our speciality. The figure shows the instrument complete. The reservoir holds about three pints of fluid, which is poured in by means of a funnel, the long tube being detached for the time. The air-pump is then screwed on at the top, as pointed out by the dotted line, and air is then pumped in until the resistance feels sufficient. The tube, which is a continuous armoured one, has at the distal end a control tap, which gives an exact control of the force of the stream, and a bayonet joint enables any form of nozzle to be used, the one depicted being an aural one. Tubes for irrigation of the nasal sinuses, Hartman's canula, etc., can all be used. If no fluid is put into the sphere it is converted into a compressed air apparatus. Sprays, nasal, etc., are supplied for use with it.

AN ANTISEPTIC INJECTOR. (Walter F. Chappell. "New York Med. Journ.,"
Sept. 26, 1896.)

This is an ingeniously contrived injector for the application of oleostearate of zinc to the nasal or other passages. The construction is such that the medicine employed cannot enter the rubber bulb which is attached to one end to expel it, being prevented from so doing by the formation of the glass bulb, which joins the stem in a manner somewhat similar to that employed in a safety ink bottle.

R. Lake.

ANABRUOSE PULMONAIRE. (Valdare, 63, Rue Pessac, Bordeaux.)

This is an ingenious little inhaler, formed like a cigar, with an artificial amber mouthpiece. The cigar is hollow, is filled with fine sawdust, saturated with an ethereal solution of benzoic, salicylic, and carbolic acids, menthol, and eucalyptol, and is meant to enable men to inhale the vapour without using a bulky and ugly respirator.

NEW PREPARATIONS, ETC.

CHINSOL. (B. Kühn, 36, St. Mary-at-Hill, London.)

A new antiseptic and disinfectant, in powder or tablets. It possesses a slight but pleasant aromatic scent; it is non-corrosive, non-toxic, and is possessed of remarkable germicidal properties. The development of staphylococcus pyogenes aureus is arrested by a solution of one in forty thousand. But perhaps its greatest value to

REVIEWS.

A Text Book of Histology, Descriptive
 and Practical, for the Use of Students
 242
 Archives of Clinical Skiagraphy 58, 178
 Der Gesangsarzt 58
 Diseases of Ear 121
 Gardiner: The History of Surgical
 Anæsthesia 57
 Gleason: Diseases of the Nose and
 Throat 57
 Handbuch der Laryngologie, etc.,
 178, 305
 Mycosis Pharyngis Leptothricia and
 Keratosis Pharyngis 365
 Neue Transplantations-Methode für die
 Radikaloperation bei Chronischen
 Eiterungen des Mittelohres 56
 Our Growing Children 58
 Surgery of Chest 242
 Vorlesungen über die Krankheiten der
 Luftröhre 362
 Ueber die Bedeutung der Durchleuch-
 tung für die Diagnose der Kiefer-
 höhleneiterungen 365

NEW PREPARATIONS.

Anabrose Pulmonaire 367
 Antisyphilitic Serum 122
 Antityphoid Serum 122
 Apenta Water 122
 Base for Medications for Nose and Throat 136
 Chinsol 367
 Chloralamide and Pot. Brom. Tabloids 122
 Colchicine Salicylate Capsules 244
 Euthymol 368
 Ethyl Chloride 244
 Extract of Golden Seal 368
 Fet. Bovine Purif. 122
 Improved Gregory Powder 243
 Nasal Tablets 368
 Soloids—Zinc Chloride ; Corrosive Sublimate ; Pot. Permang. ; Silver Nitrate 243
 Taka Diastase 368

NEW REMEDIES.

Acetanilid 133
 Argentamide 133
 Creosote Carbonate 133
 Formalin 133
 Lysol 133
 Ortho-mono-chlorphenol
 Pyrozone 133
 Tannigen 133
 Thiol 133

NEW INSTRUMENTS.

Adenoid Forceps 136
 Antiseptic Injector 367
 Continuous Syringe 367
 Cotton Holder 291
 Electro-motor Acoumeter 119
 Forehead Mirror 289
 Galvano-cautery, Rheostat for 288
 Improved Mouth Gag 179
 Naso-Manometer 138
 New Tracheotomy Tube 91
 Orthoscope 291
 Pharyngeal Tonsil, Instrument for Removal of 288, 289
 Polypus Snare 206
 Post-nasal Forceps 59
 Quer's Curette 307
 Rheostat 288
 „ for Pharyngeal Tonsil Removal 288, 289
 Ring Knife for Adenoids 223
 Snare for Anterior Ends of Turbinates 151
 Speculum to Assist Post-nasal Examination 184,
 Sprays 308
 "Sun" Pocket Stove 366
 Tonsillotome 180
 Tracheal Valve 307
 Water Pressure Accumulators 59
