

REVIEWS

Volume 11

JOURNAL OF THE INSTITUTE OF PETROLEUM : "This series of volumes is one upon which the oilman should keep an eye, especially if he is research-minded."

CLAY MINERAL BULLETIN : "The scientific level of the papers in this volume maintains the high standard which has now come to be expected of these proceedings. The excellent format is similar to that previously used. The abstracts accompanying the communications are adequate, and reproduction of all the plates and most of the figures are good, and a useful author-subject index is provided.

Volume 10

NATURE : "This long-awaited English translation is a valuable and welcome contribution to the basic literature available to micropalaeontologists."

JOURNAL OF THE INSTITUTE OF PETROLEUM : "The International Series of Monographs on Earth Sciences . . . is a laudable venture, and the (tenth volume) will undoubtedly prove to be of considerable value to all English-speaking students . . .".

Volume 9

ROCKS AND MINERALS : "The conferences of the Clay Minerals Committee have provided stimulating material for previous volumes which have been welcomed by all workers and students in the subject. The high standard has been maintained in the latest publication and all who have appreciated earlier *Clays and Clay Minerals* volumes in the Earth Sciences Series will want to bring their library up-to-date by acquiring this excellent work."

THE MINING ENGINEER : "It is indeed good to see that the latest findings in a difficult field have been made so readily available by the publishers, Pergamon Press Ltd., who are to be congratulated on the production as a whole."

JOURNAL OF THE AMERICAN CERAMIC SOCIETY : "The volume is one of a continuing series of major importance to all who are concerned with clays. In style and quality of production, this volume maintains the high standard of its predecessors."
