

Acta Numerica 1997

Volume 6

CONTENTS

Constructing cubature formulae: the science behind the art

Ronald Cools

Wavelet and multiscale methods for operator equations

Wolfgang Dahmen

A new version of the Fast Multipole Method for the Laplace equation in three dimensions

Leslie Greengard and Vladimir Rokhlin

Lanczos-type solvers for nonsymmetric linear systems of equations

Martin H. Gutknecht

Numerical solution of multivariate polynomial systems by homotopy continuation methods

T. Y. Li

Numerical solution of highly oscillatory ordinary differential equations

Linda R. Petzold, Laurent O. Jay and Jeng Yen

Computational methods for semiclassical and quantum transport in semiconductor devices

Christian Ringhofer

Complexity theory and numerical analysis

Steve Smale

Acta Numerica is an annual publication containing invited survey papers by leading researchers in numerical mathematics and scientific computing. The papers present overviews of recent developments in their area and provide 'state of the art' techniques and analysis.
