The Weary Titan Britain and the Experience of Relative Decline, 1895–1905 Aaron L. Friedberg

How do statesmen become aware of unfavorable shifts in relative power and how do they seek to respond to them? As national decline becomes an increasingly prominent theme in American political debate, these questions have taken on an immediate, pressing significance.

The Weary Titan is a penetrating study of a similar controversy in Britain at the turn of the twentieth century. Drawing on a wide variety of sources, Aaron Friedberg explains how England's rulers understood and responded to the initial evidence of erosion in their country's industrial, financial, naval, and military power.

Resisting Protectionism Global Industries and the Politics of International Trade Helen V. Milner

Why didn't the protectionist spiral of the 1920s reappear in the 1970s in light of similar economic and political realities? In *Resisting Protectionism*, Helen Milner analyzes the growth of international economic interdependence and its effects on trade policy in the United States and France. She argues that the limited protectionist response of the 1970s stems from the growth of firms' international economic ties, which reduces their interest in protection by increasing its cost. Thus firms with greater international connections will be less protectionist than more domestically oriented firms. The book develops this thesis by examining the international ties of export dependence, multinationality, and global intra-firm trade.
