EXERCISES AND THEOREMS IN GEOMETRY

by CLEMENT V. DURELL, M.A.

This is **an alternative arrangement of the material contained in the author's outstandingly successful "New Geometry for Schools"**, already in its sixth large impression. This version is intended to meet the requirements of those teachers who prefer to have Exercises, Constructions and Theorems respectively collected together in separate sections of the book.

"Mr. Durell's new books once again put the author well into the lead in the field of geometrical teaching. . . . a great advance in geometrical teaching. . . . extraordinarily well planned and graded. . . . admirably set out."—MATHEMATICAL GAZETTE

GRAPH BOOK

by C. V. DURELL, M.A., *and* A. W. SIDDONS, M.A.

This widely-popular book is both a textbook and a working exercise-book.

"The conjunction of the names Durell and Siddons is in itself a noteworthy event in the universe of mathematical text-books, and this "Graph Book" is the bright result. . . . The book contains all that is required for School Certificate purposes, and teachers and pupils alike should be delighted at the smoothness of this path to knowledge."—JOURNAL OF EDUCATION
