

P02-202 - USING WORKING-OCCUPATIONAL REHAB METHOD WHEN WORKING WITH PSYCHIATRIC PATIENTS

N. Matkovic, R. Perisic

Special Psychiatric Hospital, Kotor, Montenegro

There has been an organized plan, which helps to develop the rehab methods. Rehab, viewed as a group of measures and acts, has its goals. It is to help individuals to function using the maximum of their capabilities and potentials left.

The plan methods are:

-stimulations

-reeducations

-compensations

-neuropsychological rehab

The model has been applied to 50 patients, of both sexes. They were all diagnosed with schizophrenia. Behaviour evaluation scale was used during the first four weeks of the working-occupational treatment.

A good rehab model can decrease the negative symptoms (reducing of anxiety, reducing inferiority, bringing the confidence back). At the same time it can improve the quality of the patients' life.
