Experimental Agriculture publishes the results of research on crops, herbage and forage, with the main emphasis on field experiments carried out in the warmer climates of the world. It also includes accounts of new experimental techniques, discussions of specific problems met in countries where agricultural production is developing rapidly, review articles on new developments in scientific agriculture, and occasional papers on technical, economic and sociological aspects of farming systems. The journal is the successor to *The Empire Journal of Experimental Agriculture*.

Experimental Agriculture is published quarterly. Four parts form a volume.

Subscriptions may be sent to any bookseller or subscription agent or direct to Cambridge University Press, P.O. Box 92, London, N.W.1. Subscriptions in the U.S.A. and Canada should be sent to the American branch of the Press, 32 East 57th Street, New York, N.Y. 10022. The subscription price is £7.00 net (including postage) for an annual volume (\$23.00 in the U.S.A.), payable in advance; separate parts cost £2.00 net or \$6.50 each (plus postage).

Second class postage paid at New York, N.Y.

Back Volumes. Inquiries for Vols. 1-32 of *The Empire Journal of Experimental Agriculture* should be addressed to Wm Dawson & Sons Ltd, Cannon House, Folkestone, Kent. Previously published parts of *Experimental Agriculture* are available from the London or New York offices of Cambridge University Press.

NOTES FOR CONTRIBUTORS

Contributions will be welcomed from scientists of all nationalities, particularly those working in tropical and sub-tropical countries where up-to-date techniques of agricultural experimentation are helping in the rapid development of more modern methods of farm production. Contributions, which must be written in English, should be sent to the Editor, Professor J. P. Hudson, The Spinney, Wrington, Bristol.

Conditions of acceptance. Submission of a paper will be taken to imply that the material has not previously been published, and is not being considered for publication elsewhere. Papers published in *Experimental Agriculture* may not be reprinted or published in translation without permission from the Editor, given on behalf of the Editorial Board.

General lay-out. Before having their manuscripts typed contributors are asked to look carefully at the lay-out of other papers published in this journal, to ensure that their own papers, as submitted, conform as closely as possible to

the accepted pattern. This very much facilitates the work of the Editor and may often result in a paper being published earlier than if it requires a great deal of detailed editorial attention. Numerical data, which should only be included if they are essential to the argument, can be presented either in the form of tables or diagrams, but should never be shown in both ways. It is not the normal custom of the Journal to publish notes shorter than about 2000 words (4 pages) or longer than about 6000 words (12 pages including illustrations).

Typescripts. A top copy and one carbon copy of the script should be submitted, typed with double spacing, on one side of the paper only and with margins of about 1½ inches at the left-hand side and head of each sheet. Quarto size is preferred to foolscap.

Title. The development of automatic bibliographic methods, based on single-word indexing of the significant words in the title, makes it essential that the title of each paper should contain the maximum of relevant informa-

Crop Production: Cereals and Legumes

B. F. Bland

*RHM Agricultural Industries Ltd.
Throws Farm, Stebbing
Great Dunmow
Essex, England*

June 1971, xii + 466 pp., £5.00

Productivity in crop farming has improved rapidly with the aid of modern technology. But, to date, no published literature has dealt with cereals and legumes in depth and indeed no recent observations have been made on crop husbandry. This book describes the history, development, botanical classification and utilisation of each crop. The sequence of operations (including all the technical details such as cultivations, fertilisers, seed, sprays, etc.) necessary to their production are fully described. Ample tables and photographs have been supplied to illustrate the various concepts and principles.

Termites and Soils

**K. E. Lee
and T. G. Wood**

*CSIRO, Division of Soils
Adelaide, South Australia*

August 1971, x + 252 pp., £4.00

This is the first account of the relationships between termites and soils and is a synthesis of biological, pedological and agricultural information on termites. The main emphasis is on the significance of termites in soil formation, the incorporation and decomposition of organic matter in the soil and the availability of nutrients for plant growth. Termites are considered as components of the soil/plant/animal ecosystem, and an assessment is made of their contribution to the system and their effect in relation to that of other soil invertebrates.

The Role of Water in Agriculture

Edited by J. A. Taylor

The contents of this book are based on papers and discussions at a Symposium held at the Welsh Plant Breeding Station near Aberystwyth in March 1969.

256 pages £2.75 hard cover

Intensive Beef Production

T. R. Preston and M. B. Willis

A unique monograph which after surveying and analysing all aspects of the growing and fattening of cattle for meat presents an operational approach to beef production of world wide application. The authors, who are currently working in the Institute of Animal Science, Cuba, combine first hand experience in the field with an assessment of the appropriate scientific literature of the last fifteen years.

536 pages £8.00 hard cover

Fat Soluble Vitamins

Edited by H. A. Morton

Partial Contents: Chemical Structure and Physical Properties; The Biochemistry of Vitamin A in the General System; The Chemistry of Vision; Human Malnutrition in Respect of Fat-Soluble Vitamins; Fat-Soluble Vitamins and Related Substances in the Nutrition of Domestic Animals including Poultry; The Fortification of Human and Animal Foods with Fat-Soluble Vitamins.

366 pages £6.00 hard cover

International Encyclopaedia of Food and Nutrition, Volume 9

Urea as a Protein Supplement

Edited by M. H. Briggs

The provision of sufficient food for the world's population is today a considerable problem for all those responsible. This volume covers all aspects of the use of synthetic urea to supplement dietary protein for animals. A comprehensive account is included in the methods for the industrial preparation of the urea, and the possible role of urea feeding to alleviate world protein shortages is given.

AUTOMATION OF CAB SERVICES

The Commonwealth Agricultural Bureaux are introducing computer techniques for the provision of specialist scientific information services for agricultural research workers. The new system will facilitate:

- (a) speedier journal production and earlier notice of papers;
- (b) the inclusion of improved indexes in each journal issue;
- (c) the search of the whole CAB data base to provide special outputs on selected topics, current awareness, personal and group services, annotated bibliographies, etc.;
- (d) the interchange of information with other major information services in this field;
- (e) the supply of magnetic tapes.

Some automated journal production will start in 1972 and further details will be announced in due course.

Any enquiries should be addressed to:

RHODESIAN JOURNAL OF AGRICULTURAL RESEARCH

VOL. 9 No. 1

CONTENTS

1971

Animal Husbandry

Complete diets for dairy cows:

Part 4. Estimation of maintenance energy requirements

Part 5. Effects of restricted feeding of complete diets on milk production

Tobacco

Application of fungicides to flue-cured tobacco:

Part 1. Medium-to-high-volume application

Part 2. Low-volume, mistblower application

Horticulture

Performance of short-day onion varieties in relation to date of sowing:

Part 1. Yield and quality analysis

EntomologyEcological observations on *Earias* spp.**Wildlife**

Agricultural utilization of semi-domesticated eland:

Part 4. Chemical composition of eland browse

Research Note

Development of the reticulo-rumen in young beef calves

Book Reviews

Performance recording in sheep

Crop improvement in East Africa

Published twice annually

Annual subscription R\$3.00

Single numbers R\$1.50
