FROM CALIFORNIA**

## General Viticulture Second Edition

A. J. Winkler, Lloyd A. Lider,  
W. M. Kliewer, and James A. Cook

Since its original publication this book has been welcome wherever grapevines are cultivated: it is a clear, concise treatment of modern viticulture, based on the extensive experimental research conducted by the authors in California and elsewhere. This new edition has been revised throughout. Much new material is included on vine structure and physiology, development of grapes, grape quality, methods of propagation which by-pass the usual one-year-in-the-vine-nursery, and many other areas.

# PESTS OF FIELD CROPS

*Second Edition*

By F.G.W. Jones and Margaret Jones

A thoroughly revised and updated edition of the standard reference work on the life cycles and control methods of common agricultural pests. The authors describe pest populations, morphology, and classification, followed by separate heavily illustrated chapters on specific types of pests. They also consider the wealth of legislation that has been enacted to control pests and regulate trade in products that may harbor pests. A final chapter discusses pesticides and pesticide residue.
