

## PCO AG

PCO is a world-leading manufacturer of high speed and high performance digital cameras. Our product portfolio offers digital camera solutions for the most demanding scientific research and industrial applications featuring highest dynamics, best light sensitivity, lowest noise levels and fast frame rates.

PCO is the definition of Excellence in Development, Production, Sales and Support.

PCO cameras combine the best characteristics of high quality cameras and scientific measuring instruments. For more than 25 years our highly trained specialized team members have developed and handcrafted PCO cameras. Excellent performance and reliability are guaranteed by using sophisticated technologies in design, high production standards and strict quality controls.

- **pco.flim**—Fluorescence (Luminescence) Lifetime Imaging application simplified... with the pco.flim, which is the first luminescence lifetime imaging camera. The camera has a revolutionary image sensor and makes use of fluorescence lifetime imaging in the frequency domain, making it suitable for numerous applications in the field of biomedical research.
- **pco.edge family**—the sCMOS camera systems pco.edge are a breakthrough in scientific camera development by combining the advantages of CCD and CMOS technology in a single device. The lowest readout noise, wide dynamic range, and fast frame rates all at high resolution are achieved at the same time with the very compact camera head.

PCO owned subsidiaries in America, Europe and Asia provide a strong support network for our customers worldwide. Our factory owned distribution channels ensures that PCO cameras are developed and supported in a manner that meets our customer applications with customer input having a direct path back to our product development and support teams.
