Can the part ever be greater than the whole? It could never be proved by Algebraical formulæ, but, in one sense, a good case could be made out for the proposition. In the making of an Aeroplane it so often happens that the whole life of the machine rests upon the finish and accuracy of one small part—on that does not only the life of the Machine but its Pilot frequently depend. Small parts must be obtained from reliable makers.

**IF IT'S A SMALL PART GET IT FROM PULVO.**

# THE "GUARDIAN ANGEL" PARACHUTES.

For Life Saving uses on the Training Grounds : and for special Naval and Military operations. Open automatically, and dropped from Aeroplanes, always carry their man within  $2\frac{1}{2}$  seconds. Open instantaneously, and bring their man safely to the ground from any height above 200 feet. All the Airman has to do is to jump overboard, everything else is done for him automatically. Pilots can in the last resort charge enemy Aeroplanes with every prospect of their own safety. Non-spinning Shock-Absorber Slings, taking all shocks off the Parachutist and Parachute. Aviator's Harness, to carry safely a wounded or insensible man. Instant release on landing. Standardised in every detail, air and waterproof, they can be carried continuously for six months. These Parachutes are under static and kinetic control in all the phases of their action. There is no possibility of the entanglement of their rigging in the fiercest air current. These Parachutes can be dropped with absolute safety from Aeroplanes flying at any speed. These Parachutes reduce free-fall to its minimum, thus preserving the Airman's nerves. Adapted for use with every type of Aircraft, kite and free balloons, airships and aeroplanes. Special adaptations made for special purposes : they are adaptable to every kind of purpose. These Parachutes are sealed to prevent tampering : the seals are broken only in the act of usage.
