

Essential Reading

Marine Biology

International Journal on Life in Oceans and Coastal Waters

Editor-in-Chief: O. Kinne

Now available online

The journal publishes original contributions on:

- Plankton research: Studies on the biology, physiology, biochemistry and genetics of plankton organisms under laboratory and field conditions.
- Experimental biology: Research on metabolic rates and routes in microorganisms, plants and animals.
- Molecular biology, biochemistry, physiology and behaviour of marine organisms.
- Biosystem research: Experimental biosystems and microcosms. Energy budgets, interspecific relationships, food webs. Dynamics and structures of populations. Use, management and protection. Pollution.
- Evolution: Investigations on speciation, population genetics, and biological history of the oceans.
- Theoretical biology related to the marine environment.
- Methods: Apparatus and techniques employed in marine biological research; underwater exploration and experimentation

Plus carriage charges. Price subject to change without notice. In EU countries the local VAT is effective. Errors and omissions excepted.

Cambridge Journals

Environmental Conservation

Environmental Conservation is one of the longeststanding and most authoritative of the journals dealing comprehensively with the science underpinning environmental concerns at a global level. Uniquely, it aims to cover all aspects of the field, including issues in human institutions, industry, pollution and habitat degradation, energy and materials sources, atmospheric and oceanic processes, and coastal zone management, while maintaining a foundation in underlying research. Published quarterly, the journal includes comment, subject reviews, standard and short research papers, book reviews and meeting reports on all relevant aspects of the broad subject involved. Environmental Conservation publishes all accepted

material rapidly and uses short papers and comment for particularly quick dissemination of research results and ideas. This journal is essential reading for all environmentalists, managers, consultants and scientists wishing to keep abreast of current developments in environmental science worldwide.

Subscriptions Volume 25 in 1998: March, June, September and December £156 for institution; £68 for individuals prices include delivery by air ISSN 0376-8929
