Nutrition Research Reviews

Volume 23, 2010 ISSN: 0954-4224

Aims and Scope

Nutrition Research Reviews publishes comprehensive and challenging review articles on selected key topics in nutritional science. Authors are encouraged to take a critical approach in appraising the literature while also aiming to advance new concepts and hypotheses. The journal publishes both solicited and unsolicited articles.

Nutrition Research Reviews is published twice a year by Cambridge University Press on behalf of The Nutrition Society.

The contents page of this journal is available on the Internet before publication at <http://www.cambridge.org/nrr>

Editorial Board

Editor-in-Chief

Dr Kate M Younger, *Dublin Institute of Technology, Ireland*

Address for correspondence

Dr Kate M Younger, *Editor-in-Chief, Nutrition Research Reviews, School of Biological Sciences, Dublin Institute of Technology, Kevin Street, Dublin 8, Republic of Ireland*
Tel: +353 1 4024662 Fax: +353 1 4024995 Email: katherine.younger@dit.ie

US Editor

Professor C M Weaver, *Purdue University, USA*

Editors

Dr N Binns, *NMB Consulting Limited, Ireland*

Dr D Dardevet, *INRA, France*

Dr M Pufulete, *Kings College London, UK*

Editorial Advisors

Professor P J Aggett, *UK*

Dr M Ashwell, *Baldock, UK*

Dr D A Bender, *University College London, UK*

Dr J L Black, *Warrimo, Australia*

Professor J Cade, *University of Leeds, UK*

Dr C Edwards, *Glasgow University, UK*

Dr S French, *Sheffield University, UK*

Professor L Hambræus, *University of Uppsala, Sweden*

Dr J Houdijk, *SAC, UK*

Professor J C Mathers, *University of Newcastle, UK*

Professor H J Powers, *University of Sheffield, UK*

Dr P Rogers, *University of Bristol, UK*

Dr B Sivakumar, *National Institute of Nutrition, India*

Professor N W Solomons, *CESSIAM, Guatemala*

Professor J B Ubbink, *University of Pretoria, South Africa*

Professor M Versteegen, *Wageningen University, Netherlands*

Editorial staff

C Goodstein (*Publications Manager*), C Jackson (*Deputy Publications Manager*),
J Norton, L Weeks and H Zdravics (*Publications Officers*) C T Hughes (*Sub-editor*)

The Nutrition Society has as its objective the advancement of the scientific study of nutrition and its applications to the maintenance of human and animal health.

Application of membership is invited from anyone whose work has contributed to the scientific knowledge of nutrition, whether such work has been in the laboratory, the field or the clinic, and whether experimental, clinical, agricultural or statistical in nature. There is also a student membership scheme with reduced subscriptions.

Particulars of The Nutrition Society and application forms for membership are available from The Nutrition Society,
10 Cambridge Court, 210 Shepherds Bush Road, London W6 7NJ, UK.

Tel: +44 (0)20 7602 0228, Fax: +44 (0)20 7602 1756, Email: edoffice@nutsoc.org.uk

Publisher: Katy Christomanou

Nutrition Research Reviews is an international journal published biannually (June and December) by Cambridge University Press on behalf of the Nutrition Society.

Subscription information:

Volume 23 2010 (2 issues)
Internet/print package: £186/\$363 American only/€289 EU only
Internet only: £147/\$273 Americas only/€221 EU only
Print only: £175/\$339 Americas only/€267 EU only

Back volumes are available. Please contact Cambridge University Press for further information.

Claims for non-receipt of journal issues will be considered on their merit and only if the claim is received within six months of publication. Replacement copies supplied after this date will be chargeable.

US POSTMASTERS: please send address corrections to *Nutrition Research Reviews*, Cambridge University Press, 100 Brook Hill Drive, West Nyack, New York 10994-2133.

Information for Authors: The journal publishes both solicited and unsolicited review articles. For unsolicited material, authors are asked to submit a summary of the article to the Editor-in-chief in the first instance:

Dr K. M. Younger
School of Biological Sciences
Dublin Institute of Technology
Kevin Street
Dublin 8
Republic of Ireland
Tel: +353 1 40 24662
Fax: +353 1 40 24995
Email: Katherine.younger@dit.ie

Directions to Contributors: if not printed in this issue, are available from the Editor-in-chief.

Offprints: The author (or main author) of an accepted paper will receive a free PDF of their paper and a voucher copy of the issue in which their paper has been published. Additional offprints are available for a fee and should be ordered at proof stage. **No page charges are levied by this journal.**

Copyright: As of July 2000 the copyright of all articles submitted to *Nutrition Research Reviews* are retained by the authors or their institutions. For articles prior to this date permission for reproduction of any part of the journal (text, figures, tables or other matter) in any form (on paper, microfiche or electronically) should be sought directly from the Society, at: The Publications Office, The Nutrition Society, 10 Cambridge Court, 210 Shepherds Bush Road, London W6 7NJ, UK.

Disclaimer: The information contained herein, including any expression of opinion and any projection or forecast, has been obtained from or is based upon sources believed by us to be reliable, but is not guaranteed as to accuracy or completeness. The information is supplied without obligation and on the understanding that any person who acts upon it or otherwise changes his/her position in reliance thereon does so entirely at his/her own risk. Nutritional programming of gastrointestinal tract development. Is the pig a good model for man?

P. Guilloteau, R. Zabielski, H. M. Hammon & C. C. Metges

Introduction

4

Effects of nutritional programming on the gastrointestinal tract

5

Why is the gastrointestinal tract important?

5

Effects of nutritional programming on the gastrointestinal tract

5

Animal models to study nutritional programming and development of the gastrointestinal tract

6

The most frequently used animal models

6

Swine as a model of the human species

7

Comparative gastrointestinal tract ontogeny

8

Global aspects of nutrition

9

Fetal development

10

Fetal development: intestinal morphometry

10

Fetal development: digestive enzymes

10

Fetal development: active transporters

10

Fetal development: regulation

10

Postnatal development

10

Postnatal development: colostrum and milk composition

10

Postnatal development: gut closure and macromolecule absorption

11

Postnatal development: organ development, motility and digestive enzymes

11

Postnatal development: absorption

11

Postnatal development: immune system

12

Postnatal development: regulation

12

The sow–piglet dyad as a model for understanding nutritional programming in the human mother–infant dyad

12

Small for gestational age or intra-uterine growth retardation

12

Weight and length of organs

13

Stomach

13

Pancreas

14

Small intestine

14

Metabolism

14

Body composition

14

Regulation

14

Large for gestational age

14

Other benefits and limitations of swine and the ‘sow–piglet’ dyad

15

Conclusion

New hypotheses for the health-protective mechanisms of whole-grain cereals: what is beyond fibre?	
A. Fardet	
Introduction	65
What are whole-grain cereal products?	67
Definition	67
What proportions?	70
The importance of whole-grain cereal product consumption	78
Whole-grain and wholemeal	79
Current hypotheses and mechanisms for the protective action of whole-grain cereals	79
Food structure	79
Whole-grain cereals as a rich source of fibre	79
Whole-grain cereals and butyrate production	80
The 'second-meal effect'	80
Whole-grain cereals as rich sources of anti-carcinogenic compounds	81
Whole-grain cereals as a rich source of antioxidants	82
Whole-grain cereals as rich sources of magnesium	82
The action of some anti-nutrients on starch hydrolysis and glycaemia	83
Conclusion	84
New hypotheses: a broader perspective for the protective action of whole-grain cereals	84
The antioxidant hypothesis must not be reduced to free radical scavenging and antioxidant enzyme activation	84
Whole-grain cereals as a source of polyphenols involved in cell signalling	84
Whole-grain cereals are a rich source of sulfur compounds	85
The possible action of whole-grain cereal compounds on plasma uric acid level	85
Whole-grain cereals as a source of phytic acid and lignins	86
Whole-grain cereals as a source of bioactive compounds with underestimated physiological effects	86
Whole-grain cereals as a source of lipotropes and methyl donors: betaine, choline, folates, methionine and <i>myo</i> -inositol	86
The specific actions of bound and free ferulic acid	87
The specific actions of lignins	88
The combined effects of B vitamins	88
The effects of whole-grain cereals on bone, teeth, articulation and tendon health	89
Whole-grain cereals as a source of oligosaccharides	89
The specific action of phytosterol and of little studied bioactive whole-grain cereal compounds: α -linolenic acid, policosanol, melatonin and <i>para</i> -aminobenzoic acid	89
The nutrigenomic approach	90
Conclusion	91
Cereals other than wheat	93
The bran fraction	93
Some specific compounds	93
γ -Oryzanol in rice	93
Avenanthramides and saponins in oats	93
$\beta(1 \rightarrow 3)(1 \rightarrow 4)$ -Glucan in barley and oats	94
Alkylresorcinols in rye	94
New bases for improving the nutritional properties of cereal products	94
Optimising and controlling the delivery of bioactive compounds for improving health	94
The traditional use of fermentation and the development of new technologies	95
Growing conditions	95
Genetic approach	95
Development of new technologies	97
Increasing nutritional density in bioactive compounds through germination, soaking and pre-fermentation of whole-grain cereals and/or their fractions	97
Reinforcing the food structure cohesiveness in processed cereal products	98
Isolating the aleurone layer from the wheat bran fraction	98
Conclusions	98
General conclusions	98
The importance of preserving bran and germ fractions	98
The concept of the 'whole-grain package'	99
The importance of pesticides and mycotoxins	99
Perspectives	99
