*A positive statement of
the principles of a free society*

If America is to win the world ideological struggle, the one weapon we most need is a *positive* democratic philosophy: One in which personal liberty is not a value, but the source and condition of *all* moral values. Today, as that traditional liberty is sacrificed bit by bit on the altars of anti-Communism, social welfare, national security, and the common good, it is essential that we review our ideals of freedom and determine precisely *what* we believe and what we want to preserve. To this end, the author of *The Road to Serfdom* now examines our historic philosophy of freedom and explores the paradox that finds us diluting democracy in the name of preserving it.

GROWTH of the FIRM

By EDITH TILTON PENROSE,

The Johns Hopkins University; and Economic Library Selections

Dr. Penrose's theory of the process involved in the growth of firms is based on extensive field research, and a thorough examination of the literature written on the subject of business. The author gives a logical, consistent, and self-contained theory of this crucial process, and the limits to the size of firms. Many illustrations are provided, although no general "testing" of the theory is attempted.

The book presents systematic discussions that are real contributions to economic literature, such as—an analysis of the economics of diversification, growth through merger, and the industrial significance of limitations on the rate of growth.
