

Transport Canada Crisis Management System (CMS)*Ruth E. Landers*

Security Inspector, SEP, Security and Emergency Preparedness (SEP), Vancouver, British Columbia, CANADA

CMS is a computer program used by the Situation Centres of the Federal Department of Transport, to manage information in the event of a major transportation-related crisis. It is a bilingual, web-based application that allows the user to access and log information concerning the event and to create and send situation reports to senior management and outside agencies.
