The Pioneers

Of the Plywood industry were Venesta Ltd.; they held the premier position then because there were no competitors. Now, in the face of increasing competition from almost every country in the world, they hold it still—indisputably.

**VENESTA
PLYWOOD**

It is in constant demand by the British and Allied Governments, the largest Shipbuilding and Railway Companies, Aeroplane & Motor Car Builders, etc. It is waterproof, unshrinkable, and practically indestructible, and these qualities, together with its smooth, clean surface, make it the finest material in the world for panelling of every description.

Aeroplane Models

THE Silver Model of an Aeroplane illustrated shows how technical knowledge and skilled workmanship are allied in the models produced by the Goldsmiths and Silversmiths Company.

Infinite care is taken to ensure every detail being accurate and of proper proportions, and to reproduce an exact replica of the original.

Models can be prepared from the original or from a photograph. Estimates and designs will be submitted free upon application.

The Goldsmiths and Silversmiths Company have no other establishments in Regent Street, Oxford Street, or anywhere else in London, and no branches in the Provinces or Abroad.

The efficiency of your machine depends upon your clutches and brakes.

Twenty years or so ago we invented Ferodo Fabrics. Since then, we have, by employing skilled engineers and the finest testing plant in the world, greatly improved Ferodo Fabrics, so that to-day they are readily acknowledged to be the finest friction surfaces in the world.

They are entirely unaffected by water, oil or acid, and absorb more foot lbs. of energy per square inch than any other material known. Wood and leather linings char and quickly wear out. Ferodo Fabrics are spark proof and non-inflammable.

Ferodo Fabrics have the name stamped on each foot. Look for it when ordering your new linings.

Code: A.B.C. 5th Edition.

POINT BY POINT

“TITANINE” DOPE

(Free from Tetrachlorethane and all Spirit derivatives of Chlorine)

Defies Competition.

- ☞ **IMPERVIOUSNESS**—Examine a surface doped with Titanine with a powerful magnifying glass, and see how the fabric is filled in. Try this test with another dope. Try also varnishing over three coats of Titanine and three coats of another dope. Varnish will not penetrate Titanine, as can be seen by examining the back of the fabric. **TITANINE SAVES ONE OR MORE COATS.**
- ☞ **FLEXIBILITY AND ADHESION**—Dope two pieces of similar fabric with Titanine and another dope, bend the two samples backwards and forwards and the greater flexibility of Titanine will be at once noticeable. Titanine after exposure retains its flexibility and adhesion in a remarkable degree, when other dopes lose the greater part of their flexibility and adhesion owing to their brittleness.
- ☞ **RESISTANCE TO FLAME**—Place a burning wax vesta on a frame doped with Titanine, and leave the match to burn completely out. Repeat the test with another dope. The result is convincing.
- ☞ **LIGHTNESS**—Three coats of Titanine, forming the impervious surface mentioned above, weigh less than 2 oz. per sq. yard. Four coats can be reduced to 2 oz., either by dilution with spirit, or by careful and rapid application. Tests will show that weight for weight, Titanine gives the most impervious skin.
- ☞ **RESISTANCE TO OIL AND PETROL**—Mr. J. L. HALL, of the Hall Aviation Co., Hendon, writes:—“The Tractor biplane (coated with Titanine) has now been in constant use for two months, and the canvas is still clean and new looking, in spite of the deteriorating effects of oil, petrol, &c., and the water used in washing down the machine.”
- ☞ **DURABILITY**—The manufacturers of Titanine satisfied themselves, before putting it on the market, that it possessed a durability hitherto quite unknown in dopes.
- ☞ **FINISH**—The matt surface of Titanine affords a firm hold for finishing varnishes and paints, which do not adhere equally well over the glossy surface of most of the other dopes. When no finishing material is applied, Titanine can be polished quickly and inexpensively (and at less than one-fourth the cost of a coat of dope) by means of the Polishing Fluid supplied by the manufacturers.
- ☞ **PRICE**—Let us quote you !

The Leading NON-POISONOUS Dope.
