INDEX FOR VOLUME 166

	PAGE
Alon, N. & Nenadov, R. Optimal induced universal graphs for bounded-degree graphs	61
Aspenberg, M. & Persson, T. Shrinking targets in parametrised families	265
Basmajian A. & Šarić, D. Geodesically complete hyperbolic structures	219
Betts, L.A. & Dokchitser, V. Variation of Tamagawa numbers of semistable abelian varieties in field extensions	487
Bouyer, F., Costa, E., Festi, D., Nicholls, C. & West, M. On the arithmetic of a family of degree - two K3 surfaces	523
Chan, A. & Mazorchuk, V. Diagrams and discrete extensions for finitary 2-representations	325
Chang, H. & Farnsteiner, R. Finite group schemes of p -rank ≤ 1	297
Chen, W. Analytic number theory for 0-cycles	123
Coskun, I. & Prendergast-smith, A. Fano manifolds of index $n - 2$ and the cone conjecture	1
Dasbach, O. & Tsvietkova, A. Simplicial volume of links from link diagrams	75
Destagnol K. La conjecture de Manin pour une famille de variétés en dimension supérieure	433
Fan, A.-H., Li, M.-T. & Ma, J.-H. Generic points of shift-invariant measures in the countable symbolic space	381
Favacchio, G. & Migliore, J. Multiprojective spaces and the arithmetically Cohen–Macaulay property.	583
Ghosh, A. & Marnat, A. On Diophantine transference principles	415
Gupta, N. & Kapovich, I. The primitivity index function for a free group, and untangling closed curves on hyperbolic surfaces. <i>With the appendix by Khalid Bou–Rabee</i>	83
Hajir, F. & Maire, C. Prime decomposition and the Iwasawa MU-invariant	599
Kochloukova, D. H. & Martínez–Pérez, C. Subdirect sums of Lie algebras	147
Kohayakawa, Y., Mota, G. O. & Schacht, M. Monochromatic trees in random graphs	191
Leinster, T. The magnitude of a graph	247
Lucà, R. & Rogers, K. M. A note on pointwise convergence for the Schrödinger equation	209
Luca, F., Radziwiłł, M. & Shparlinski, I. E. On the typical size and cancellations among the coefficients of some modular forms	173
Müller, K. Capitulation in the cyclotomic \mathbb{Z}_2 extension of CM number fields	371
Manners, F. A note on the polynomial Freiman–Ruzsa conjecture over \mathbb{Z}	243
Meisner, P. Expected value of high powers of trace of frobenius of biquadratic curves over a finite field	543
Parks, J. An asymptotic for the average number of amicable pairs for elliptic curves	33
Ruas, M. A. S. & Silva, O. N. Whitney equisingularity of families of surfaces in \mathbb{C}^3	353
Shao, X. & Xu, W. A robust version of Freiman’s $3k - 4$ Theorem and applications	567

INSTRUCTIONS TO AUTHORS

1. Preparation of Manuscripts

A paper should be submitted electronically to mpeditor@hermes.cam.ac.uk in pdf form only. Authors are encouraged to prepare their manuscripts in LaTeX 2e using the PSP class file. The class file, together with a guide, `PSP2egui.tex`, and sample pages, `PSP2esam.tex`, can be downloaded from <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/pspscls> in either packed or unpacked form. These files will be updated periodically; please ensure that you have the latest version.

A cover page should give the title, the author's name and institution, with the address to which mail should be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas, *Some applications of a theorem of G. H. Hardy* would be useless).

Authors are asked to provide an abstract as a basis for search on the Web. This may be an explicit abstract at the start of the paper. Otherwise the first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians. Please note that the abstract should be able to be read independently of the main text. References should therefore not be included in the abstract.

Authors are encouraged to check that where references are given, they are used in the text. Experience has shown that unused references have a habit of surviving into the final version of the manuscript.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician). Please also check the Cambridge University Press website for information about the style in which the paper should be submitted.

2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and to reduce the chance of error. For instance n sub k is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponentials like:

$$\exp\{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example 'from (7)'.
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , o , O , 0 ; x , X , \times ; ϕ , Φ , \emptyset ; l , l ; $e.k.$, $\kappa.k.$

Footnotes should be avoided.

Please use typewriter font for all addresses and email addresses.

Omit \square from the end of proofs.

In listing assertions, conclusions, etc. do not use a vertical column of dots and do not follow (a) or (i) by a capital letter (eg. (i) the absolute value . . .)

In making references precise use [3, theorem 5.1]

3. Diagrams

Diagrams should be in black ink or from a high-quality laser printer and should not be larger than 30 cm by 45 cm. Lettering to be inserted by the printer should be shown clearly on copies of the figures rather than on the original drawings. Please note that a charge may be made if hand-drawn diagrams need to be re-drawn for publication.

Figure 1 here

A typed list of captions may be provided at the end of the manuscript in the following format:

Figure 1. *A basis for . . .*

Note that there is no point at the end of the heading. All headings should be centred.

4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

Heading for tables should be shown in the following way:

Table 1. *A basis for . . .*

Note that there is no point at the end of the heading. All headings should be centred over columns.

5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Where references are given, they should be used in the text. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

[1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20-104.

[2] M. P. FOURAM and D. S. SCOTT. Sheaves and logic. In *Applications of Sheaves* Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302-401.

[3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).

[4] F. W. LAWVERE. Functional semantics of algebraic theories. PhD. thesis. Columbia University (1963).

6. Submission of papers accepted for publication

When a paper has been accepted for publication the relevant TeX files of the final version, accompanied by a pdf file, should be sent to the Editor by e-mail.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

MATHEMATICAL PROCEEDINGS

*of the
Cambridge Philosophical Society*

VOLUME 166 PART 3, pages 415–617, May 2019

CONTENTS

GHOSH, A. & MARNAT, A. On Diophantine transference principles.	415
DESTAGNOL K. La conjecture de Manin pour une famille de variétés en dimension supérieure	433
