

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Volume 55 Number 1

Original Articles

- 1 HIROYUKI MASUYAMA. A new matrix-infinite-product-form solution for upper block-Hessenberg Markov chains and its quasi-algorithmic constructibility
- 29 BERND HEIDERGOTT AND YIJIE PENG. Gradient estimation for smooth stopping criteria
- 56 ANITA BEHME, DAVID OECHSLER AND RENÉ SCHILLING. On q -scale functions of spectrally negative Lévy processes
- 85 SARATH YASODHARAN AND RAJESH SUNDARESAN. Large-time behaviour and the second eigenvalue problem for finite-state mean-field interacting particle systems
- 126 ANDREW DAW AND JAMOL PENDER. Matrix calculations for moments of Markov processes
- 151 HANWU LI. Optimal multiple stopping problem under nonlinear expectation
- 179 SABINE JANSEN, LEONID KOLESNIKOV AND KILIAN MATZKE. The direct-connectedness function in the random connection model
- 223 EMILIO DE SANTIS AND FABIO SPIZZICHINO. Construction of aggregation paradoxes through load-sharing models
- 245 ALEXANDER STOLYAR. Large-scale behavior of a particle system with mean-field interaction: traveling wave solutions
- 275 IRENE CRIMALDI, PIERRE-YVES LOUIS AND IDA G. MINELLI. Interacting nonlinear reinforced stochastic Processes: synchronization or non-synchronization
- 321 CHUANG XU, MADS CHRISTIAN HANSEN AND CARSTEN WIUF. Full classification of dynamics for one-dimensional continuous-time Markov chains with polynomial transition rates
