

## Subscription rates

Subscription rates for volume **54** (2017) of *Journal of Applied Probability* (JAP) are as follows (post free and online access at <http://cambridge.org/jpr>). For libraries and institutions: US\$361.00, £233.00 (online only); US\$397.00, £256.00 (online & print). For individuals, US\$137.00, £88.00 (online & print). The subscription rates for volume **49** (2017) of *Advances in Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: [subscriptions\\_newyork@cambridge.org](mailto:subscriptions_newyork@cambridge.org) in the Americas and [journals@cambridge.org](mailto:journals@cambridge.org) for the Rest of the World.

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address [submissions\\_japaap@sheffield.ac.uk](mailto:submissions_japaap@sheffield.ac.uk). All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/17

Volume 54 Number 1

1 EUGENE SENETA. Obituary: Joseph Mark Gani AM, DSc, FAA, FASSA

*Research Papers*

- 12 TOMOMI MATSUI AND KATSUNORI ANO. Compare the ratio of symmetric polynomials of odds to one and stop
- 23 GREGORY GAGNON. Stochastic impulse control of exchange rates with Freidlin–Wentzell perturbations
- 42 KOJI TSUKUDA. Estimating the large mutation parameter of the Ewens sampling formula
- 55 ROMAIN ABRAHAM, AYMEN BOUAZIZ AND JEAN-FRANÇOIS DELMAS. Local limits of Galton–Watson trees conditioned on the number of protected nodes
- 66 JAAKKO LEHTOMAA. Large deviations of means of heavy-tailed random variables with finite moments of all orders
- 82 IBRAHIM RAHIMOV. Statistical inference for partially observed branching processes with immigration
- 96 MARKUS KUBA AND HENNING SULZBACH. On martingale tail sums in affine two-color urn models with multiple drawings
- 118 MATHIEU GERBER AND NICK WHITELEY. Stability with respect to initial conditions in  $V$ -norm for nonlinear filters with ergodic observations
- 134 MIGUEL A. SORDO AND GEORGIOS PSARRAKOS. Stochastic comparisons of interfailure times under a relevation replacement policy
- 146 ENRICO BARONI, REMCO VAN DER HOFSTAD AND JÚLIA KOMJÁTHY. Nonuniversality of weighted random graphs with infinite variance degree
- 165 RICHARD KENYON AND MEI YIN. On the asymptotics of constrained exponential random graphs
- 181 JOHN HASLEGRAVE AND MATE PULJIZ. Reaching consensus on a connected graph
- 199 ERNST SCHULTE-GEERS AND WOLFGANG STADJE. Small drift limit theorems for random walks
- 213 MICHAEL FUCHS, HSIEN-KUEI HWANG AND YOSHIAKI ITOH. From coin tossing to rock-paper-scissors and beyond: a log-exp gap theorem for selecting a leader
- 236 ERIK EKSTRÖM, KRISTOFFER GLOVER AND MARTA LENIEC. Dynkin games with heterogeneous beliefs
- 252 OFFER KELLA AND MARC YOR. Unifying the Dynkin and Lebesgue–Stieltjes formulae
- 267 O. J. BOXMA, E. FROSTIG AND D. PERRY. A reinsurance risk model with a threshold coverage policy: the Gerber–Shiu penalty function
- 286 CLAUDE LEFÈVRE, PHILIPPE PICARD AND MATTHIEU SIMON. Epidemic risk and insurance coverage
- 304 YI-CHING YAO, DANIEL WEI-CHUNG MIAO AND XENOS CHANG-SHUO LIN. Corrected discrete approximations for the conditional and unconditional distributions of the continuous scan statistic
- 320 M. V. BOUTSIKAS, M. V. KOUTRAS AND F. S. MILIENOS. Asymptotic results for the multiple scan statistic

*Short Communications*

- 331 MARTIN MEIER AND LEOPOLD SÖGNER. A new strategy for Robbins’ problem of optimal stopping
- 337 PHILIP A. ERNST AND LARRY SHEPP. On occupation times of the first and third quadrants for planar Brownian motion
