

EDITORIAL

This issue of *Clay Minerals* is entirely devoted to papers read at a joint meeting of the Clay Minerals Group of the Mineralogical Society and the Petroleum Exploration Society of Great Britain entitled 'patterns of mineral diagenesis on the NW European continental shelf and their relations to facies and hydrocarbon accumulation' and held at the University of Cambridge on 7–8 April 1983. The organizer of this highly successful meeting, Dr C. V. Jeans, has also contributed a thought-provoking introduction to this issue. Thanks are due to Dr P. F. Rawson, Department of Geology, University College, London, who helped to edit some of the papers. Publication has been supported financially by many oil companies and companies servicing the oil industry; these are listed below. A grant towards publication from the Mineralogical Society's General Fund is also gratefully acknowledged.

Amoco (U.K.) Exploration Co.
B.P. Petroleum Development Ltd
Britoil plc
Esso Exploration and Production U.K. Ltd
Gas Council (Exploration) Ltd
