

GEMSTONES OF THE BRITISH ISLES

Val Axel Firsoff

Gemstones of the British Isles is the ideal book for the avid 'rockhound' to keep in his car or knapsack, next to his geological hammer, ready to identify some strange specimen that he might light upon during a day's outing, or discover what gemstones might be picked up anywhere from Truro to Tobermory, from Cork to Chester le Street. It is the first comprehensive guide to the location of gemstones in the United Kingdom and Ireland to be published for a hundred years. Based on many years' personal experience in gemhunting and on a large number of references from scientific journals and other sources, Mr. Firsoff has compiled an invaluable reference book for the 'rockhound'.

£2.50 hardback £1.25 paperback

lavishly illustrated 168 pages

MINERALOGY FOR STUDENTS

M. H. Battey

This is the only modern British text to give a detailed account of the principles of the subject, as well as a thorough description of the mineral species likely to be encountered by the undergraduate.

It is written in two parts; Part 1 deals with principles and methods, approached through the fundamental aspect of atomic structure, and in Part 2 some two hundred mineral species are described. Considerable thought has been given to producing simplified drawings of crystal structures to illustrate this section, and drawings of external morphology are cross-referenced between the two parts to cover most of the important habits and forms.

This book will prove to be invaluable to teachers and students alike.

BELL

The Surface Features of the Land

Alfred Hettner

Translated by Philip Tilley

A key work in geomorphology, first published in 1921, but now appearing in English for the first time. Hettner's criticism of prevailing attitudes to the study of landforms stimulated widespread reaction among German geologists but still remains to make its mark in the English-speaking world.

about £6.00

Macmillan

Palaeozoic Fishes Second Edition

J. A. Moy-Thomas and R. S. Miles.

Extensively revised by R. S. Miles, Senior Scientific Officer in the Department of Palaeontology, British Museum (Natural History).

The text, which has been extensively revised to incorporate the latest available information, embraces world-wide species of Palaeozoic fishes, and integrates structure, biology and relationships of the various groups in a balanced approach written at a level suitable for a wide readership. A special feature of this work is the high quality of the line drawings, all of which were specially commissioned for this new edition.

Ancient Sedimentary Environments A Brief Survey

R. C. Selley, Senior Sedimentologist, Oasis Oil Company, Libya, and Lecturer in Sedimentology, Imperial College of Science and Technology, London.

This undergraduate student textbook demonstrates how to identify the depositional environment of ancient sedimentary rocks: a discipline which is of increasing importance in the search for oil, gas and other economic materials. The author has laid particular emphasis on the application of techniques and has included a large number of case histories concerning a wide variety of environments, each of which is examined in the light of its sedimentary characteristics, geological case history, and economic significance.

NOTES FOR CONTRIBUTORS

Articles submitted for publication in the *Geological Magazine* should be addressed to the editors at the Sedgwick Museum, Downing Street, Cambridge CB2 3EQ, England, and sent in duplicate. Publications for notice and review should be marked for the review editor at the same address.

Contributions, including reference lists, should be typewritten, double-spaced, and should be carefully revised. Where typing errors are corrected or minor alterations made, they should be done neatly in the typescript, leaving the margins clear. Marginal marks should be used only when correcting proofs. Illustrations should be drawn to allow reduction to a maximum size of 165mm × 110mm; originals must not exceed 495mm × 330mm and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 2, 2a, etc.), and halftone plates will be referred to (also in arabic) as Plates 2, 2a, etc. Folding plates will not be accepted. Captions must be typed on separate sheets.

The typescript must be accompanied by a short summary. Contributors should follow the rules in the Geological Society of London's *Notes to Authors* (*Proc. geol. Soc. Lond.*, No. 1627, Oct. 1965), with the following exceptions. The total length of a paper should not in general exceed 20 pages of the *Geological Magazine*; preference and priority are given to short papers. Primary headings should be in lower case, at margin, with arabic numeral. Secondary headings should be in *lower case italics (underlined)*, at margin, with Section number followed by lower case letter (1.a, 1.b, etc.). Tertiary headings should be in *lower case italics (underlined)*, at margin, with Section number, lower case letter, and number of sub-section (1.a.1, 1.a.2, etc.).

No cross-references by page should be given to other parts of the text, but 'above' and 'below' used (with the section specified, e.g. 'Section 2 a. 1.'). References should be abbreviated in the form of the *World List of Scientific Periodicals* (4th edit., 1963-65) as far as possible. e.g. Lapworth, C. 1878. The Moffat Series. *Q. Jl geol. Soc., Lond.*, 34, 240-343. Books should be cited briefly as: Burns, R. G. 1970. *Mineralogical applications of crystal field theory*. 224 p., C.U.P., London. Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless already in the press. In the interests of authors, copyright is assigned to Cambridge University Press.

Twenty-five offprints of each article will be provided free of charge. Additional offprints may be purchased according to an agreed scale of charges.
