

Letter to the Editors

complete removal with the guillotine. Complete removal with the guillotine does not produce any disabling cicatrisation, but I agree with him that the cicatrisation following the dissection operation may be a cause of disability, and I consider that this operation should be reserved for tonsils which cannot be removed entirely with the guillotine. The latter include very small septic tonsils, those fixed by adhesions, and those which have previously been partially removed.

Mr Hovell believes that hæmorrhage is more frequent and more severe after enucleation than after tonsillotomy. I, on the contrary, am convinced that it is less so after complete removal with the guillotine than after partial removal. On theoretical grounds, one would expect bleeding to be less free and persistent when the vessels are divided in the loose areolar tissue beneath the capsule of the tonsil than when they are severed in the firm substance of the tonsil itself, which is often also the seat of chronic inflammation and fibrosis. I have been operating on tonsils and adenoids at St George's Hospital for nearly eighteen years, the majority of the operations being performed in the out-patient department; the patients are seen after two or three hours, and, if there is any anxiety on the score of bleeding, they are admitted. I have no statistics, but my recollection is, that in the days of tonsillotomy, there were some two to four such admissions in each year; now that complete removal with the guillotine is practised, the admissions average less than one a year. The remaining portion of the tonsil frequently becomes swollen and inflamed after tonsillotomy, and I find that healing after complete removal is quicker and less painful, and that there is less liability to aural and other complications. Therefore, on the grounds of safety, of comparatively painless healing, and, above all, of freedom from subsequent tonsillar disease, I advocate complete removal with the guillotine whenever operation on the tonsils is indicated, and dissection only when the local condition makes enucleation with the guillotine impossible.—Yours faithfully,

HAROLD BARWELL, F.R.C.S.

GENERAL NOTES

ROYAL SOCIETY OF MEDICINE,

1 *Wimpole Street, London, W. 1.*

Section of Laryngology—*President*, Sir William Milligan, M.D.
Hon. Secretaries, W. G. Howarth, F.R.C.S., and T. B. Layton, D.S.O., M.S. The next Meeting of the Section will be held on 2nd December. Members intending to show cases or specimens are

General Notes

invited to send notice to the Senior Hon. Secretary, Mr W. G. Howarth, 75 Harley Street, London, W. 1.

Section of Otology—President, Dr A. Logan Turner. *Hon. Secretaries*, Norman Patterson, F.R.C.S., and F. J. Cleminson, M.Ch. The next Meeting of the Section will be held on 20th January 1922. Members proposing to show patients and specimens should send notice to the Senior Hon. Secretary, Mr Norman Patterson, 16 Devonshire Place, London, W. 1, at least twelve days before the meeting. Papers must be sent in at least twenty-one days in advance, complete and ready for printing.

* * *

BRITISH MEDICAL ASSOCIATION.

Glasgow Meeting, 1922.

The Annual Meeting of the Association will be held in Glasgow from the 25th to 29th July.

* * *

TENTH INTERNATIONAL CONGRESS OF OTOLOGY.

Paris, 1922.

President—Professor P. SÉBILEAU.

Treasurer—Dr GEORGES LAURENS.

Secretary-General—Dr A. HAUTANT, 28 rue Marbeuf, Paris (VIII.).

As already announced, the Meeting was originally fixed for the 26-30th July 1922. When it was pointed out that this would interfere with the Meeting of the British Medical Association in Glasgow, our French colleagues most courteously and at considerable inconvenience promptly arranged to alter the date. The Congress will be held in Paris from the 19th to 21st July, *i.e.*, the week preceding the Meeting of the British Medical Association.

Our Paris colleagues have further demonstrated their goodwill by a recent visit of the Secretary-General to London. Dr Hautant attended the Annual Dinner of the Section of Otology (Royal Society of Medicine) on the 21st October under the Chairmanship of Sir Charles Ballance, and took part in the Meeting of the Section the following afternoon, when the new President, Dr A. Logan Turner, occupied the Chair. British otologists were charmed with his personality and the warm invitation which he conveyed. There is little doubt that it will be cordially responded to.

The British Committee of Organisation has already received no less than 100 adherents. Those who may not have received a direct invitation are requested to communicate with the Secretaries, Mr. Lionel Colledge, 22 Queen Anne Street, London, W. 1., or Dr J. S. Fraser, 50 Melville Street, Edinburgh, sending their subscription of

General Notes

ten shillings. All who join the British Committee will be kept informed of details and arrangements for the Congress as they develop.

We are glad to hear that, although the Congress preserves the title of Otology, it will practically embrace both Rhinology and Laryngology. The mornings will be devoted to visits to operations, clinics and museums, and to the Institut Curie. As the Congress will be held in the Faculté de Médecin there will be every facility for demonstrating patients or specimens, and of giving exhibitions with the Lantern or Epidiascope. There will also be a Museum in connection with the Congress.

It was at first intended to have certain set subjects for general discussion. This plan has been altered. Representative otologists have been invited in different countries to choose their own subjects and to send in a *Rapport*, which will be printed in good time and circulated beforehand to every Congressman who has sent his subscription to the Secretary-General. The Subscription to the Congress has been fixed at 100 francs (= £2).

As at present arranged, the following Rapporteurs have been nominated:—

Doctors Buys (Bruxelles) and Guix (Utrecht), "Vestibular Tests: their value as a functional measure of the vestibular route."

Professor Gradenigo (Naples), "Unsuspected Syphilis of the Ear."

Professor Schmiegelow (Copenhagen), "Diagnosis and Treatment of Abscess of the Cerebellum."

Mr G. Jenkins (London), "Otitic Meningitis."

Professor Hinojar (Madrid), Dr Reik (Boston), and Dr Segura (Buenos Ayres), have also been invited, but have not yet settled their subjects.

* * *

Professor M. HAJEK.

We are pleased to note that Dr M. Hajek, whom so many will recall at the old Policlinic in Vienna, has celebrated his sixtieth birthday. On the death of Chiari, he succeeded to the University Chair, and his pupils and friends have marked the present occasion by issuing in his honour a special number of the *Monatsschrift für Ohrenheilkunde und Laryngo-Rhinologie*.

* * *

The Editors of the Journal desire to express their indebtedness to Dr Douglas Guthrie and his staff of collaborators, and to thank them for the assistance which they have voluntarily given, throughout the year, in abstracting the current medical literature bearing upon the specialty.

 — Œdema of Upper Aperture of (Sir James Dundas-Grant), 397
 — Papilloma of, with a Malignant Tendency (H. Buckland Jones), 243
 — Papillomata of (G. W. Dawson), 538
 — Simple Tumours of, Three Cases (J. Dundas Grant, A. L. Macleod, and G. W. Dawson), 38
 — Supraglottic Tumour of (A. L. Macleod), 346
 — Tumour of; A Soft Fibroma (W. H. Jewell), 399
 Laryngeal Case for Diagnosis (Andrew Wylie), 242
 — Growth (?) with Abductor Paralysis (Eleanor Lowry, M.B.), 400
 — (?) Tuberculosis (Lionel Colledge), 301
 — Tuberculosis, Spontaneous Cicatrisation of (Sir St Clair Thomson), 200
 — Tuberculosis treated with the Galvano-Cautery (Sir St Clair Thomson), 538
 — Ventricle and Ventricular Bands, Tumours of the (W. Jobson Horne), 397

Section of Laryngology—*continued*

- Laryngeal Web, Congenital (R. A. Worthington), 396
 Laryngectomy, Total (Sir Charters Symonds), 347
 Laryngis, Sacculus, Eversion of the (Irwin Moore), 398
 Laryngitis, Tuberculous (T. B. Layton), 196
 Laryngocele (Frederick Spicer), 396
 Laryngo-stroboscope (E. W. Scripture), 297
 Leontiasis Ossium (Lambert Lack), 359
 Lingual Cancer treated with Copper Alanine (James Donelan), 242
 Lupus treated by Sodium Iodide and Ionisation (Douglas Harmer and T. H. Just), 396
 Maxilla, Chronic Osteomyelitis of, of Dental Origin (G. W. Dawson), 195
 — Superior, Actinomycosis of, (Douglas Harmer and T. H. Just), 396
 Maxillary Antral Disease, Series of Cases of (W. S. Syme), 141
 Mediastinal Abscess, Fatal (William Hill), 199
 Microscopic Specimens (Wyatt Wingrave), 141
 Mouth and Submaxillary Region, Painless Swelling of, probably Actinomycosis (W. H. Jewell), 196
 — Fauces and Epiglottis, Pemphigus of (Sir J. Dundas-Grant), 347
 Nares and Nasopharynx, Adenofibro-myxoma of, removed by Lateral Rhinotomy (C. Firwin Cuthbert), 241
 Nares, Sarcoma of (Herbert Tilley), 346
 Nasal Accessory Sinuses, Gunshot Wounds of (J. F. O'Malley), 140
 — Cavity, Extensive Malignant Endothelioma of (Dan M'Kenzie), 539

Index

Section of Laryngology—*continued*

Nasal Cavities and Nasal Accessory Sinuses, Cases, Casts, Photographs and Diagrams illustrating repair of Wounds of (G. Seccombe Hett), 37

— Deformities treated by Transplantation of Costal Cartilage (Douglas Guthrie), 346

— Septum, Dental Abscess of (Dan M'Kenzie), 300

— Septum, Fibroma of (Dan M'Kenzie), 300

— Large Angeioma of (Herbert Tilley), 399

Naso-pharyngeal Angeio-Fibroma (G. W. Dawson), 136, 200

Naso-pharynx, Dense Growth in, simulating Adenoids (J. Dundas Grant), 299

— Gumma in Vault of (J. Dundas Grant), 299

— Sarcoma and Endothelioma of, Treatment by Radium (Douglas Harmer and N. S. Finzi), 298

Nose, Cyst of Floor of (G. W. Dawson), 242

— Cyst of Floor of (J. F. O'Malley), 299

— Depressed Bridge of, Baby with (W. Douglas Harmer), 301

— Dermoid Fistula of (W. Stuart-Low), 37

— External, Tumour of; Adenoma of Lachrymal Duct (H. L. Whale), 346

— Foreign Body (Centipede) discharged from (Cyril Horsford), 400

— Foreign Body removed from, after Thirteen Years (R. A. Worthington), 38

— Melanotic Sarcoma of (W. M. Mollison), 200

Nostril and Nasal Cavity, Supernumerary, on Right Side (H. Bell Tawse), 200

Nostrils, Bilateral Retention Cysts of Floor of (G. W. Dawson), 492

Section of Laryngology—*continued*

Œsophagus, Application of Radium in Malignant Disease of (William Hill), 141

— Congenital Deformity of (W. Appleyard), 346

— Multiple Polypi (Œdematous Fibromata) of Middle Third of (William Hill), 199

— Obstruction of the, by a Foreign Body acting as Ball Valve (Somerville Hastings), 435

— Removal by the Indirect Method of a Jagged Piece of Bone impacted in (W. Jobson Horne), 135

— Spasm at the Entrance to the (A. Brown Kelly), 139

Ozæna, Treatment of, by Ionic Medication (A. J. Hutchison), 141

Palate and Pharynx, Large Submucous Lipoma of (Herbert Tilley), 196

— Hard, Extensive Papilloma of (W. J. C. Nourse and Archer Ryland), 200

- Ventricle of Morgagni, Cyst of (T. Ritchie Rodger), 491
- Vocal Cord, Left, Fixation of, and Extreme Mobility of Left Arytenoid Eminence (W. T. Gardiner), 442
- Right, Epithelioma of (R. P. Mathers), 443

Mayer & Phelps

CHIRON HOUSE
59-61 New Cavendish St.
London, W.1

Chiron Examination Lamp (Regd.)

The Chiron Lamp has been approved by many leading Specialists, and we have no hesitation in recommending it as superior to any lamp yet produced. The Burner of the $\frac{1}{2}$ -Watt type, of special design, gives a brilliant illumination of about 200 candle-power.

Tonsil Paste Applicator

Devised by IRWIN MOORE, M.B., C.M. (Edin.), Surgeon to
the Throat Hospital, Golden Square

Vide "The Treatment of Enlarged or Diseased Tonsils in Cases where Surgical Procedures are Contra-indicated" (*Journal of Laryngology*, October 1919).
