

'Mickraform'

Sulphathiazole Suspension

20%

'Mickraform' sulphathiazole crystals—many hundred times smaller than the normal—have made possible a satisfactory *fluid* sulphonamide preparation for local use: a highly stable, non-irritating, non-alkaline, sterile suspension.

While new uses for 'Mickraform' Sulphathiazole Suspension are still being developed, it has already proved highly effective in the treatment of traumatic wounds, burns, gonorrhoea and pyogenic skin infections, especially impetigo. The suspension is also ideally suited for use in major and minor operative procedures, *e.g.*, in thoracic or abdominal surgery and in treating such local infections as abscesses, carbuncles, whitlows, etc.

* 'Mickraform' Sulphathiazole Suspension, 20%, is supplied in 25-cc. bottles, each containing 5 gm. microcrystalline sulphathiazole suspended in isotonic saline. The concentration can be reduced as desired by the addition of sterile normal saline.

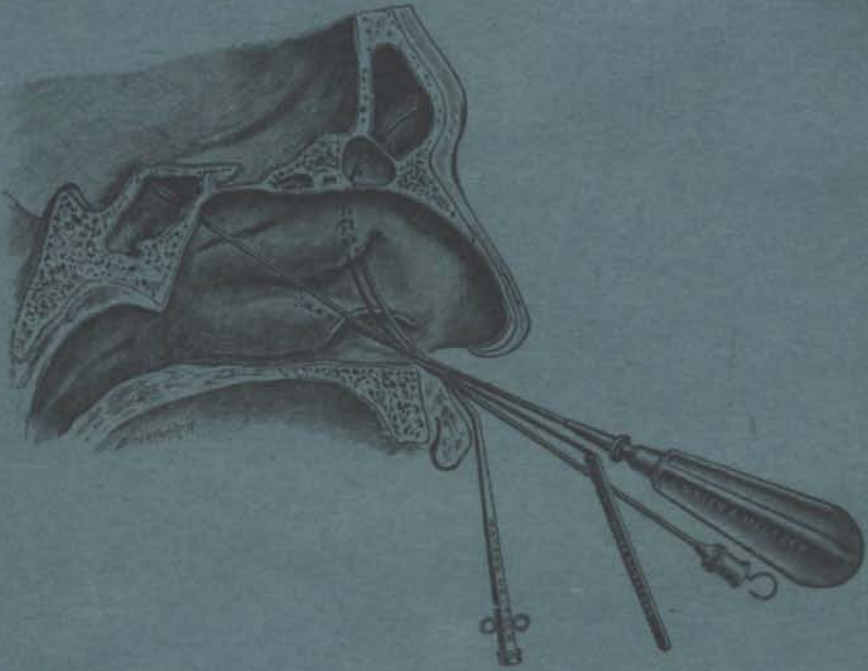

Descriptive literature is available. Requests for samples must bear the personal signature of the doctor concerned.
