The *Journal of Tropical Ecology* publishes papers in the general field of the ecology of tropical regions, devoted either to the results of original research, experimental or descriptive, or forming significant reviews. Short communications are also welcome in the expectation that these will encourage discussion between readers. The **Journal** aims not only to act as a valued means of communication between established ecologists, but also, by the breadth and quality of papers, its format and price, to stimulate the research activities of young ecologists in tropical nations.
