○ ANTIBIOTICS AND ANTIBIOSIS IN AGRICULTURE Edited by M. WOODBINE

This volume reviews both the current state of research and progress in antibiotics and antibiosis within the ambit of agriculture and agricultural science. Synergism and synergic aspects are a linking theme.

The papers included cover six main areas: the context of synergism; antibiotics, antibiosis and food; antibiotics, antibiosis and animals; antibiotics, antibiosis and feed; practical considerations; and public health aspects.

A full bibliography and references are given for each chapter, making this a valuable reference source for research workers in, for example, departments of Food Science, Microbiology and Animal Nutrition. It should be of interest to the agriculturalist and the veterinary scientist and to workers in the pharmaceutical industry.

1977 · 380 pages · £18.00

○ PLANT PROTEINS Edited by G. NORTON

This collection of papers provides comprehensive and up-to-date coverage of the production and use of plant proteins as sources of human food.

Experts in a subject which is increasingly relevant because of the high cost of producing animal protein for human consumption have contributed chapters on biochemical and physiological aspects of synthesis and deposition, including related factors which could be harmful to man and animals; on methods of plant protein production and ways to improve quality and yield; and finally on the use of these proteins as a source of human food and their modification by the food industry.

This volume is essential reading for workers in research and industry in the agriculture and food science fields and will also be of value to plant physiologists and biochemists.

1977 · 363 pages · £16.00

○ RECENT ADVANCES IN ANIMAL NUTRITION – 1977 Edited by W. HARESIGN and D. LEWIS

This book contains contributions by leading international authorities in the field of nutritional science. It describes in detail the various aspects of rumen fermentation and deals briefly in addition with nutrition in poultry, pigs and fish. It will be of value to students and research workers in animal nutrition and to all those concerned with the nutrition of farm livestock.

1977 · 213 pages · £11.00

SWINE FEEDING AND NUTRITION

By TONY J. CUNHA

*A Volume in the ANIMAL FEEDING AND
NUTRITION Series*

This book discusses in detail the feeding and nutrition of swine. The author presents a review of the swine industry, and treats the many factors that can effect nutrient requirements, emphasizing the reasons why nutrient requirement standards are only a guide to formulating diets. Much of the book is devoted to concise up-to-date summaries on minerals, vitamins, proteins, amino acids, carbohydrates, fiber, fatty acids, fat energy, water, enzymes, antibiotics, and other antimicrobial compounds. The author discusses the nutrient requirements of the pig and compares them to National Research Council (NRC) recommendations; he investigates and treats deficiency symptoms for all nutrients, and illustrates most nutritional deficiencies with photographs. In addition, the author discusses a well-balanced diet for pigs based upon nutrient requirements, and examines and reports on the relative value of feeds used throughout the world.

1977, 352 pp., \$20.50/£14.55
