

Electromagnetic emission from laser wakefields in underdense magnetized plasmas <i>Z. D. Hu, Z. M. Sheng, W. J. Ding, W. M. Wang, Q. L. Dong and J. Zhang</i>	421
UV pulse trains by $\alpha$ -BBO crystal stacking for the production of THz-rap-rate electron bunches <i>Li-Xin Yan, Jian-Fei Hua, Ying-Chao Du, Yuan-Fang Huang, Yan You, Dan Wang, Wen-Hui Huang and Chuan-Xiang Tang</i>	429
Self-modulated wakefield acceleration in a centimetre self-guiding channel <i>C. Kamperidis, C. Bellei, N. Bourgeois, M. C. Kaluza, K. Krushelnick, S. P. D. Mangles, J. R. Marques, S. R. Nagel and Z. Najmudin</i>	433
Sensitivity study in a compact accelerator for laser-generated protons <i>P. Antici, M. Migliorati, A. Mostacci, L. Picardi, L. Palumbo and C. Ronsivalle</i>	441
Laser plasma accelerator driven by a super-Gaussian pulse <i>Tobias Ostermayr, Stefan Petrovics, Khalid Iqbal, Constantin Klier, Hartmut Ruhl, Kazuhisa Nakajima, Aihua Deng, Xiaomei Zhang, Baifei Shen, Jiansheng Liu, Ruxin Li, Zhizhan Xu and Toshiki Tajima</i>	447
Optimum angle for side injection of electrons into linear plasma wakefields <i>K. V. Lotov</i>	455
Towards Sub-TeV electron beams driven by ultra-short, ultra-intense laser pulses <i>Wei-Min Wang, Zheng-Ming Sheng, Shigeo Kawata, Chun-Yang Zheng, Yu-Tong Li, Li-Ming Chen, Quan-Li Dong, Xin Lu, Jing-Long Ma and Jie Zhang</i>	461
Computationally efficient methods for modelling laser wakefield acceleration in the blowout regime <i>B. M. Cowan, S. Y. Kalmykov, A. Beck, X. Davoine, K. Bunkers, A. F. Lifschitz, E. Lefebvre, D. L. Bruhwiler, B. A. Shadwick and D. P. Umstadter</i>	469
Propagation of an ultrashort, high-intensity laser pulse in gas-target plasma <i>Xiaofang Wang, Guanghui Wang, Zhannan Ma, Kegong Dong, Bin Zhu, Yuchi Wu and Yuqiu Gu</i>	483
Efficient generation of proton bunches by intense laser pulse with a double-slice-foil target <i>Jun Zheng, Zheng-Ming Sheng, Jin-Lu Liu, Wei-Min Zhou, Han Xu and Jie Zhang</i>	491
Energetic electron generation by magnetic reconnection in laboratory laser-plasma interactions <i>Q.-L. Dong, D.-W. Yuan, S.-J. Wang, Y. T. Li, X. Liu, S. E. Jiang, Y. K. Di Ng, K. Du, M.-Y. Yu, X.-T. He, Y. J. Tang, J. Q. Zhu, G. Zhao, Z.-M. Sheng and J. Zhang</i>	497

A Reservoir of Research...

# Journal of Fluid Mechanics

*Digital Archive 1956-1996*

From the annals of the internationally acclaimed *Journal of Fluid Mechanics*, Cambridge University Press presents the *Journal of Fluid Mechanics Digital Archive 1956-1996*.

Every single article from *JFM*'s first four decades has been scanned and made available for online use. Spanning over 10,000 articles across more than 200,000 pages, the *JFM* Digital Archive is crystal clear and searchable in seconds.

*JFM* covers all physical and mathematical aspects of the dynamics, mechanics and motion of fluids in: engineering (aeronautical, mechanical and chemical); physics (astrophysical problems, nanofluidics, polymer flows and biological systems); environmental sciences (ocean waves, atmospheric phenomena and pollutant transport processes)

To purchase the archive or to arrange a free trial please contact:

# International Journal of Astrobiology

## Managing Editor

Simon Mitton, University of Cambridge, UK

*International Journal of Astrobiology* is the peer-reviewed forum for practitioners in this exciting interdisciplinary field. Coverage includes cosmic prebiotic chemistry, planetary evolution, the search for planetary systems and habitable zones, extremophile biology and experimental simulation of extraterrestrial environments, Mars as an abode of life, life detection in our solar system and beyond, the search for extraterrestrial intelligence, the history of the science of astrobiology, as well as societal and educational aspects of astrobiology. Occasionally an issue of the journal is devoted to the keynote plenary research papers from an international meeting. A notable feature of the journal is the global distribution of its authors.

## Plasma Medicine

Applications of Low Temperature Gas Plasmas in Medicine and Biology

*Edited by* M. LAROUSI, M. G. KONG, G. MORFILL, *and* W. STOLZ

The introduction of low temperature plasma technology to medical research and to the healthcare arena in general is set to revolutionize the way we cure diseases. This innovative medium offers a valid and advantageous replacement of traditional chemical-based medications. Its application in the inactivation of pathogens in particular, avoids the recurrent problem of drug resistant microorganisms. This is the first book dedicated exclusively to the emerging interdisciplinary field of plasma medicine. The opening chapters discuss plasmas and plasma chemistry, the fundamentals of non-equilibrium plasmas and cell biology. The rest of the book is dedicated to current applications, illustrating a plasma-based approach to wound healing, electrosurgery, cancer treatment and even dentistry. The text provides a clear and integrated introduction to plasma technology and has been devised to answer the needs of researchers from different communities. It will appeal to graduate students and physicists, engineers, biologists, medical doctors and biochemists.

\$120.00: Hardback: 978-1-107-00643-0: 416 pp.

## Turbulence, Coherent Structures, Dynamical Systems and Symmetry

Second Edition

PHILIP HOLMES, JOHN L. LUMLEY, GAHL BERKOOZ, *and* CLARENCE W. ROWLEY

*Cambridge Monographs on Mechanics*

Turbulence pervades our world, from weather patterns to the air entering our lungs. This book describes methods that reveal its structures and dynamics. Building on the existence of coherent structures – recurrent patterns – in turbulent flows, it describes mathematical methods that reduce the governing (Navier–Stokes) equations to simpler forms that can be understood more easily. This second edition contains a new chapter on the balanced proper orthogonal decomposition: a method derived from control theory that is especially useful for flows equipped with sensors and actuators. It also reviews relevant work carried out since 1995. The book is ideal for engineering, physical science and mathematics researchers working in fluid dynamics and other areas in which coherent patterns emerge.

\$90.00: Hardback: 978-1-107-00825-0: 402 pp.

## Instructions for Authors

**Editorial policy** The journal welcomes submissions in any of the areas of plasma physics. Its scope includes experimental and theoretical work on basic plasma physics, the plasma physics of magnetic and inertial fusion, laser–plasma interactions, industrial plasmas, plasma devices and plasmas in space and astrophysics. This list is, of course, merely illustrative of the wide range of topics on which papers are invited, and is not intended to exclude any aspect of plasma physics that is not explicitly mentioned.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Journal of Plasma Physics* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editors' decision on the suitability of a manuscript for publication is final.

**Submission of manuscripts** Papers may be submitted to the Editor or any of the Associate Editors, preferably by email in pdf format. When a paper is accepted, the authors will be asked to supply source files in LaTeX or Word. Instructions for the preparation of these files and LaTeX style files are given in the Instructions for Contributors link at [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Incremental publishing and DOIs** In order to make articles which have been accepted for publication in *Journal of Plasma Physics* available as quickly as possible, they are now published incrementally online (at Cambridge Journals Online; [journals.cambridge.org](http://journals.cambridge.org)) The online version is available as soon as author corrections have been completed and before the article appears in a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI – Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. See [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Proof reading** Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

**Offprints** Corresponding authors will receive a PDF of their article upon publication. Print offprints may be purchased from the publisher if ordered at first proof stage.

**Copying** This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per copy fee of \$16.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022–3778/2012 \$16.00.

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions.

*For all other use*, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

# JOURNAL OF PLASMA PHYSICS

VOLUME 78 • PART 4 • AUGUST 2012

Guest Editors: Chan Joshi, Wei Lu and Zheng-Ming Sheng

## Editorial

Progress in laser acceleration of particles  
*Chan Joshi, Wei Lu and Zhengming Sheng* 321

## Research Articles

A magnetically tapered plasma density for overcoming electron dephasing  
*C. M. Wang* 323

Forward directed ion acceleration in a LWFA with ionization-induced injection  
*N. Lemos, J. L. Martins, J. M. Dias, K. A. Marsh, A. Pak and C. Joshi* 327

Collimation of laser-driven energetic protons in a capillary  
*D.-P. Chen, Y. Yin, Z.-Y. Ge, H. Xu, H.-B. Zhuo, Y.-Y. Ma, F.-Q. Shao, and C.-L. Tian* 333

Short-pulse dielectric two-beam acceleration  
*W. Gail, J. G. Power and C. Jing* 339

A proposed demonstration of an experiment of proton-driven plasma wakefield acceleration based on CERN SPS  
*G. Xial, R. Assmann, R. A. Fonseca, C. Huang, W. Mori, L. O. Silva, J. Vieira, F. Zimmermann and P. Muggli* 347

Straight and linearly tapered capillaries produced by femtosecond laser micromachining  
*S. M. Wiggins, M. P. Reijnders, S. Abuazoum, K. Hart, G. Vieux, G. H. Welsh, R. C. Issac, X. Yang, D. R. Jones and D. A. Jaroszynski* 355

Controlled ionization-induced injection by tailoring the gas-density profile in laser wakefield acceleration  
*Ming Zeng, Nasr A. M. Ha Fz, Kazuhisa Nakajima, Li-Ming Chen, Wei Lu, Warren B. Mori, Zheng-Ming Sheng and Jie Zhang* 363

CO<sub>2</sub> Laser acceleration of forward directed MeV proton beams in a gas target at critical plasma density  
*F. T. Sung, S. Ya. Tochitsky, D. J. Haberberger, W. B. Mori and C. Joshi* 373

Design considerations for the use of laser-plasma accelerators for advanced space radiation studies  
*T. Königstein, O. Karger, G. Pretzler, J. B. Rosenzweig and B. Hidding* 383

High resolution electron beam measurements on the ALPHA-X laser-plasma wakefield accelerator  
*G. H. Welsh, S. M. Wiggins, R. C. Issac, E. Brunetti, G. G. Manahan, M. R. Islam, S. Cipiccia, C. Aniculaesei, B. Ersfeld and D. A. Jaroszynski* 393

Simulations of efficient laser wakefield accelerators from 1 to 100 GeV  
*M. Tzoufras, C. Huang, J. H. Cooley, F. S. Tsung, J. Vieira and W. B. Mori* 401

Self-injected petawatt laser-driven plasma electron acceleration in 10<sup>17</sup> cm<sup>-3</sup> plasma  
*X. Wang, R. Zgadzaj, S. A. Yi, V. Khudik, W. Henderson, N. Fazel, Y.-Y. Chang, R. Korzekwa, H.-E. Tsai, C.-H. Pai, Z. Li, E. Gaul, M. Martinez, G. Dyer, H. Quevedo, A. Bernstein, M. Donovan, G. Shvets, T. Ditmire and M. C. Downer* 413
