

Instructions to authors

Detailed instructions to authors are available online here:
[cambridge.org/core/journals/journal-of-glaciology/information](https://www.cambridge.org/core/journals/journal-of-glaciology/information)

The *Journal of Glaciology* publishes three types of paper:

- Articles - concerning new findings and theories, or new instruments and methods, in glaciology; or review articles that offer an up-to-date, coherent account of a glaciological subject that is developing rapidly or has been neglected
- Letters - identical in form and general content to Articles, but of reduced length, and carrying substantially reduced processing charges
- Communications - short pieces without abstracts that could be, e.g., comments on published articles/letters, book reviews, or short correspondence on topics of interest to the community

Papers submitted should be:

- of high scientific quality
- complete and clear
- substantially different from previously published work.

Length

Papers should be concise. Lines and pages should be numbered. Letters are limited to five *Journal* pages and Correspondences to two (one *Journal* page = about 1000 words).

Original submission

Submit your paper via the *Journal of Glaciology* online submission system at <https://mc.manuscriptcentral.com/jog>

Review process

Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English, not appropriate for the journal, or of inferior quality will be rejected without review.

You will be sent a proof of your text and illustrations to check and correct in advance of online publication.

Final submission

The final accepted version of the paper should be in electronic format.

- Acceptable formats are
 - Text (including tables and figure captions) – Word, rtf or LaTeX (the IGS class file should be used; downloadable from the website). Please also supply a final PDF
 - Figures – ideally in tif or eps format (or otherwise in the format in which they were created)
- Responsibility for the accuracy of all data (including references) rests with the authors

Supplementary material

The *Journal of Glaciology* accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

General points

- Title should be concise
- Abstract should be less than 200 words

- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should
 - be one or two column widths: up to 85 mm or up to 178 mm
 - not be in boxes
 - use strong black lines (avoid tinting if possible)
 - use SI units in labels
 - use Optima, Arial or a similar sans serif font in labels
- TeX authors: please provide a pdf of the whole paper (text, tables, figures and captions) as well as the individual LaTeX and graphics files
- Equations should
 - be set in MathType or advanced equation editor
 - NOT be embedded as graphics in the text
- Tables should
 - be numbered in Arabic
 - be referred to in text (as Table 1 etc.)
 - NOT be submitted as illustrations
- All citations in text should include the author name(s) and the year of publication (e.g. Smith, 2010; Smith and Jones, 2012; Smith and others, 2014) and must have an entry in the reference list
- Reference lists should
 - be concise
 - be complete and accurate, including doi numbers
 - be provided in precise *Journal* format, including punctuation and emphasis (see past papers for style)
 - be arranged in alphabetical order by first author's surname
 - include works accepted but not published as 'in press'
 - not include personal communications, unpublished data or manuscripts in preparation or submitted for publication (these should be included in the text)

Open Access and page charges

As a gold open access journal, the *Journal of Glaciology* is published without restriction and receives no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or their funding body or institution.

The APC for non-IGS members is £1,360 for a regular article (of 6 published pages or more), £680 for a letter (of 5 published pages or fewer) and £310 for a communication (of 2 published pages or fewer). IGS members receive a 10% discount on these charges.

Figures quoted here are correct for 2023.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGS. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

Journal of GLACIOLOGY

CONTENTS Vol 69 No 275 2023

433–444 **Modelled dynamic retreat of Kangerlussuaq Glacier, East Greenland, strongly influenced by the consecutive absence of an ice mélange in Kangerlussuaq Fjord**
Jamie Barnett, Felicity A. Holmes and Nina Kirchner

445–458 **Application of first arrival seismic tomography in a glaciated basin: implications for paleo-ice stream development**
Nicholas J. Zaremba, Christopher A. Scholz and Robert Moucha

459–474 **Observational constraints on the sensitivity of two calving glaciers to external forcings**
Andrea Kneib-Walter, Martin P. Lüthi, Martin Funk, Guillaume Jouvét and Andreas Vieli

475–486 **Basal hydrofractures near sticky patches**
Hanwen Zhang, Timothy Davis, Richard F. Katz, Laura A. Stevens and Dave A. May

487–499 **Modeling seasonal growth of phototrophs on bare ice on the Qaanaaq Ice Cap, northwestern Greenland**
Yukihiko Onuma, Nozomu Takeuchi, Jun Uetake, Masashi Niwano, Sota Tanaka, Naoko Nagatsuka and Teruo Aoki

500–512 **Glacier mass-balance estimates over High Mountain Asia from 2000 to 2021 based on ICESat-2 and NASADEM**
Yubin Fan, Chang-Qing Ke, Xiaobing Zhou, Xiaoyi Shen, Xuening Yu and Drolma Lhakpa

513–524 **A comparison between three-dimensional, transient, thermomechanically coupled first-order and Stokes ice flow models**
Zhan Yan, Wei Leng, Yuzhe Wang, Cunde Xiao and Tong Zhang

525–537 **Glacier-wide seasonal and annual geodetic mass balances from Pléiades stereo images: application to the Glacier d'Argentière, French Alps**
Luc Beraud, Diego Cusicanqui, Antoine Rabatel, Fanny Brun, Christian Vincent and Delphine Six

538–550 **A site for deep ice coring at West Hercules Dome: results from ground-based geophysics and modeling**
T. J. Fudge, Benjamin H. Hills, Annika N. Horlings, Nicholas Holschuh, John Erich Christian, Lindsey Davidge, Andrew Hoffman, Gemma K. O'Connor, Knut Christianson and Eric J. Steig

551–565 **Antarctic iceberg distribution revealed through three decades of systematic ship-based observations in the SCAR International Iceberg Database**

Olav Orheim, A. Barry Giles, Geir Moholdt, T. H. (Jo) Jacka and Are Bjørndal

566–576 **Radar attenuation demonstrates advective cooling in the Siple Coast ice streams**
Benjamin H. Hills, Knut Christianson, Robert W. Jacobel, Howard Conway and Rickard Pettersson

577–590 **Large-ensemble climate simulations to assess changes in snow stability over northern Japan**
Yuta Katsuyama, Takafumi Katsushima and Yukari Takeuchi

591–606 **Glacier inventory and glacier changes (1994–2020) in the Upper Alaknanda Basin, Central Himalaya**
Aditya Mishra, H. C. Nainwal, Tobias Bolch, Sunil Singh Shah and R. Shankar

607–622 **Hydrologic modeling of a perennial firn aquifer in southeast Greenland**
Olivia Miller, Clifford I. Voss, D. Kip Solomon, Clément Miège, Richard Forster, Nicholas Scharrer and Lynn Montgomery

623–638 **Viability of chemical and water isotope ratio measurements of RAID ice chippings from Antarctica**
Isobel F. Rowell, Robert Mulvaney, Julius Rix, Dieter R. Tetzner and Eric W. Wolff

639–657 **Rock glacier composition and structure from radio wave speed analysis with dipping reflector correction**
Tyler M. Meng, Eric I. Petersen and John W. Holt

Letter

658–664 **Exploiting high-slip flow regimes to improve inference of glacier bed topography**
Alexi Morin, Gwenn E. Flowers, Andrew Nolan, Douglas Brinkerhoff and Etienne Berthier

UNIVERSITY PRESS

Front cover
A 3-MHz ice-penetrating radar profile collected in the 2005–06 austral summer of the trunk of Kamb Ice Stream, across the stagnant shear margin, and up to the summit of Siple Dome, showing differing accumulation and ice-flow histories. The bright englacial reflector in Kamb Ice Stream has been dated to the eruption of Mt. Takahe ~17.5 kya. Related to doi: 10.1017/jog.2022.86
