

Index of Subjects

- $\delta^{13}\text{C}$, 605
 ^{14}C , 1
abiotic factors, 521
above-ground, 205
abundance modelling, 67
acid phosphatase activity, 627
Acosmium cardenasii, 497
activity patterns, 303
Africa, 381, 605
agouti, 251
agricultural clearings, 25
allelopathy, 571
allometry, 271
Alouatta seniculus, 355
alpha, 521
Alticinae, 343
altitude, 139
altitudinal migration, 645
Amazon, 509
Amazon caatinga, 215
Amazona finschi, 227
Amazonia, 173
Ampelocera ruizii, 497
Amphibia, 415, 423
amphibians, 521
Andes, 547
ant, 559
Anura, 415
anurans, 407
arthropods, 637
Astrocaryum standleyanum, 473
Ateles geoffroyi, 45
Ateles hybridus, 355
Atlantic forest, 619
Atlantic rain forest, 373
Australia, 139
avian, 335
avoidance, 303

Balanites wilsoniana, 193
banana, 247
bark, 393
Barro Colorado Island, 473
bats, 173
Bayesian methods, 551
beetles, 343
below-ground, 205
Bertholletia excelsa, 251
beta, 521
beta diversity, 481, 509
biodiversity, 583
biomass, 13, 605
biomass allocation, 271
birds, 381
body mass, 185
Bolivia, 497
Boliviano–Tucumano, 583
Borneo, 445

botflies, 619
Bovidae, 13
bracken spread, 457
Brazil, 119, 127, 373
Brazilian biomes, 423
Bromeliaceae, 123, 373, 563, 571
brood temperature, 445
Brosimum alicastrum, 163
Bruchidae, 473
budburst, 237
Bufonidae, 415
burial depth, 457
Bursera, 563, 571
Burseraeae, 433

cache pilferage, 473
Calakmul, 163
camera traps, 263
canopy, 119
canopy cover, 313
canopy openness, 533
carbon isotopic composition, 215
carbon stocks, 467
carnivorous plants, 365
Caryocar glabrum, 215
Cecropiaceae, 433
Celtis zenkeri, 193
central Africa, 293
cerrado, 185
Cerro de la Muerte, 351
Cervidae, 13
Chamela-Cuixmala, 227
Chromolaena odorata, 25
Chrysomelidae, 343
Chrysophyllum albidum, 193
climatic effects, 423
clonal growth, 151
clumped, 193
clutch size, 285
CO₂ chambers, 605
coarse woody debris, 467, 627
coevolution, 619
coffee, 247
coffee plantation, 93,
Colombia, 355
commensalism, 127, 243
community structure, 481
compensatory continuum hypothesis, 163
competition, 555, 559
complex networks, 127
Conostegia xalapensis, 343
coprophagous beetles, 53
Cordia milleminii, 193
Costa Rica, 521, 559

Darwin's finches, 285
Dasyprocta fuliginosa, 251
Dasyprocta punctata, 473

defaunation, 35
dendrochronology, 237
density, 193
density-dependence, 293
Dialium pachyphyllum, 115
Dialium zenkeri, 115
diet, 645
dioecy, 433
diptercarp, 271, 551
dispersal, 193
dispersal limitation, 551
disturbance, 193
diversity, 119
drought, 393, 497

early-successional trees, 533
ecological separation, 303
ecology, 415
ecosystem engineers, 407
ecosystem respiration, 605
ectoparasitism, 619
Ecuador, 547
edge effects, 67
elevation, 285
elevational occurrence, 481
emigration, 559
energy, 559
environmental stochasticity, 151
Eperua leucantha, 215
epiphyte, 93
estimation, 115
Eucalyptus, 595
extrafloral nectar, 555

feeding group, 323
feeding guild, 67
fine roots, 271
fire ecology, 595
fire regime, 313
flood-pulse concept, 79
food, 559
food preferences, 53
foraging mode, 243
forest grazing, 583
forest habitat, 381
forest margin, 53
forest regeneration, 533
forest succession, 1
Formicidae, 365
fragmentation, 35, 67
frogs, 509
fruit abundance, 251
fruit crop size, 227
fruiting phenology, 381
fruit-set, 351
functional groups, 583
fungicide, 293
Furnariidae, 547

- Galapagos Islands, 285
 gallery forest, 151
 geophagy, 173
Geospiza fuliginosa, 285
 germination, 571
 gold dust day gecko, 243
 gradient, 139
 granivory, 227
 grass dynamics, 313
 gross primary production, 605
 growth, 185
 growth rate, 93
 growth rate model, 163
- habitat filtering, 509
 habitat preferences, 53
 habitat variability, 323
 herbivory, 151
 herpetology, 423
 hierarchical processes, 79
 home range, 185
 host limitation, 563
 host selection, 119
 host specificity, 127
 humid savanna, 605
 hummingbird visitation, 351
 hydraulic sufficiency, 215
- independent bout method, 115
 inflorescence, 555
 intermediate disturbance hypothesis, 323
 intratropical migration, 645
 introduced species, 347
 invasional meltdown, 347
Ipomoea, 563, 571
 Isoptera, 103
- jasmonic acid, 555
- Kaa-Iya National Park, 303
 Kakadu National Park, 79, 595
 Korup National Park, 293
- Lambir National Park, 205
 Lamto, 323
 land-use, 67
 land-use change, 53, 335
 landscape pattern, 79
 late-successional trees, 533
 L-dopa, 263
 leaf water potential, 497
 lianas, 637
 licks, 173
 life-history strategies, 619
 light, 559
 Lima bean, 555
 limiting resource model, 163
 litter, 313
 local species richness, 521
 logging, 45
 lost roots, 271
 LTER, 247
 Luo Scientific Reserve, 115
 Luquillo Forest Dynamics Plot, 433
- Madagascar, 365
Mamilkara zapota, 45
 Margarodidae, 335
- marsupial, 185
 Mayan zone, 45
Melaleuca, 79
Melanophryniscus cambaraensis, 415
 Melicharidae, 373
 meta-analysis, 423
 metal toxicity, 103
Metrosideros polymorpha, 1
 Mexico, 163, 227, 237, 457
Micranda sprucei, 215
Microberlinia bisulcata, 293
 microsites, 313
 mineral-rich water sources, 173
 moist savanna, 323
 monsoonal tropics, 595
 mortality, 123
 mortality rate, 93
 Mount Kinabalu, 103
 movement, 415
 Muscidae, 285
Myoprocta pratti, 251
- natural disturbance, 151
 nectar thievery, 373
 Neotropical birds, 645
 Neotropical forest, 251
Nepenthes, 365
 nest, 547
 nestling development rates, 619
 net ecosystem exchange, 605
 Nicaragua, 645
 niche breadth, 381
 niche overlap, 445
 niche partitioning, 481
 nitrogen isotopic composition, 215
 nitrogen, soil moisture, 605
 non-trophic interaction, 407
 non-volant mammal, 139
 northern Australia, 313
 null models, 445
 nutrient limitation, 123, 627
- observer effect, 243
 oceanic island, 347
Ocotea aciphylla, 215
 ohia, 1
 old fields, 247
 Orchidaceae, 93, 123, 127
Oubanguia alata, 293
- palms, 637
 Panama, 473, 637
Panthera onca, 303
 parasitism, 285
Pecari tajacu, 263, 407
Pheidole, 445
 phenology, 351
Philornis, 619
Philornis downsi, 285
 phylogenetic signal, 127
 phylogenetic structure, 127
 pitcher plants, 365
 plant defence, 555
 plant pathogens, 293
 plant-animal interaction, 227, 347, 335
 plant-frugivore interactions, 45
 pollination, 555
- polynomial models, 13
 population dynamics, 151
 population ecology, 185
 positive interaction, 347
 post-dispersal seed predation, 227
 post-fire regeneration strategies, 457
 predation, 193, 285
 primary tropical rain forest, 271
 Psittacidae, 227
Puma concolor, 303
- radiocarbon, 1
 rain forests, 119, 445
 redundancy analysis, 423
 regeneration, 25, 35
 relative growth rate, 163
 relocation, 559
 reproduction, 619
 reproductive compensation, 619
 reptiles, 521
 resource competition, 481
 resource defence, 335
 resource partitioning, 445
 resource patch, 227
 resource seasonality, 251
 resource tracking, 645
 RGR, 123
Ricinodendron heudelotii, 193
 riparian fire regimes, 79
 river continuum concept, 79
- Sabah, 103
 savanna, 13
 scale insects, 335
 Scarabaeinae, 355
 scattered trees, 335
 scatter-hoarding, 473
 sclerophylly index, 215
 Scolytidae, 473
 seasonality, 393, 645
 seasonally dry tropical forests, 25
 secondary caches, 251
 secondary growth, 393
 secondary succession, 467
 seed burial, 355
 seed dispersal, 25, 35, 115, 347
 seed fate, 355
 seed germination, 251
 seed handling, 473
 seed predation, 251, 263, 473
 seedling mortality, 293
 seedling recruitment, 35
 selective logging, 533, 551, 627
 semi-deciduous forest, 227
 serial monodomy, 559
Sericomyrmex amabilis, 263
 serpentine soils, 103
Setaria sphacelata, 247
 sex ratio, 433
 sexual diergism, 243
 sexual dimorphism, 243, 433
 silvopastoralism, 583
 size distribution, 433
 sodium, 173
 soil depth, 497
 soil heating, 457

- soil pH, 103
soil phosphorus fractionation, 627
soil temperatures, 457
soil water availability, 497
soil-feeding, 103
Solanum riparium, 497
South America, 415
South Kalimantan, 103
species abundance, 139
species composition, 53
species distribution, 323
species richness, 53, 139, 407, 481
species sorting, 509
spines, 637
spotted barbtail, 547
stable isotopes, 205
stand dynamics, 595
Stenodermatinae, 173
Stigmatococcus, 335
subtropics, 381
sugar reward, 373
sugarcane, 247
- Sundaland, 103
Sweetia fruticosa, 497
- tail regeneration, 243
Tayassu pecari, 407
temperature, 559
temperature effect, 243
temperature preferences, 445
termite community, 323
terrestrial food web, 205
Themeda triandra, 605
thermal gradient, 445
thorns, 637
Tillandsia, 563
transhumance, 583
transplantation experiment, 93
tree age, 1
tree growth rate, 1
tree rings, 237
Trema micrantha, 497
tri-trophic interaction, 343
trophic group, 205
- tropical dry forest, 237, 303, 467, 571
tropical forest, 13, 35, 163, 509, 533
tropical montane forest, 93
tropical rain forest, 293, 393, 551
tropical savanna, 79
tropical trees, 433
tropics, 139
- ultisols, 103
understorey diversity, 45
ungulates, 13
- vascular epiphytes, 123
vegetation distribution, 79
Vitis tiliifolia, 163
- wallows, 407
Wamba, 115
water, 393
wet-dry tropics, 79
wood anatomy, 215
- Yucatán Peninsula, 457

JMBA is an international journal with a worldwide distribution, publishing original research on all aspects of marine biology. It includes current international research developments and features much of the pioneering work taking place today on major issues concerning marine organisms and their environment. Subjects include ecological surveys and population studies, and chemical and physical oceanographic work.

Animal papers

Robert E. L. Naylor, University of Aberdeen, UK

Crop & Soil papers

The Journal of Agricultural Science publishes papers concerned with the advance of agriculture and the use of land resources throughout the world. It publishes original scientific work related to strategic and applied studies in all aspects of agricultural science and exploited species, as well as reviews of scientific topics of current agricultural relevance.

Price information is available at:

JOURNAL OF tropical ecology

INSTRUCTIONS FOR AUTHORS

Potential contributors are advised that careful attention to the details below will greatly assist the Editor and thus speed the processing of their manuscripts. Poorly prepared manuscripts will be returned to authors.

Submission

All manuscripts must be submitted online via the website:

<http://mc.manuscriptcentral.com/jte>

Detailed instructions for submitting your manuscript online can be found at the submission website by clicking on the 'Instructions and Forms' link in the top right of the screen; and then clicking on the 'Author Submission Instructions' icon on the following page.

The Editor will acknowledge receipt of the manuscript, provide it with a manuscript reference number and assign it to reviewers. The reference number of the manuscript should be quoted in all correspondence with JTE Office and Publisher.

The submission of a manuscript will be taken to imply that the material is original, and that no similar paper has been published or is currently submitted for publication elsewhere. Papers are first inspected for suitability by the Editor or a Board member. Those suitable papers are then critically reviewed by usually two or three expert persons. On their advice the Editor provisionally accepts, or rejects, the paper. If acceptance is indicated the manuscript is usually returned to the author for revision. In some cases a resubmission is invited and on receipt of the new version the paper will be sent to a third referee. If the author does not return the revised or resubmitted version within six months the paper will be classified as rejected. Final acceptance is made when the manuscript has been satisfactorily revised.

Preparation of the manuscript

Authors are strongly advised to consult a recent issue of the JTE to acquaint themselves with the general layout of articles. Manuscripts should be neatly typewritten on A4 paper i.e. 21 cm × 30 cm. Double sided copy is permissible for review purposes, but final submission for publication must be on one side of the paper only. Double spacing must be used throughout, allowing wide margins (about 3 cm) on all sides. Main text pages should be numbered.

When a revised ms is being returned the author is requested to send a copy of the final version on computer disk (Apple Macintosh or IBM compatible PC) together with the hard copy typescript, giving details of the wordprocessing software used (e.g. Microsoft Word, Word or Word Perfect). However, the publisher reserves the right to typeset material by conventional means if an author's disk proves unsatisfactory.

A paper should be prepared using the following format:

Page 1. *Title page.* This should contain (a) the full title, preferably of less than 20 words and usually containing the geographical location of the study; (b) a running title of not more than 48 letters and spaces; (c) a list of up to 10 key words in alphabetical order suitable for international retrieval systems; (d) the full name of each author and their current affiliation; (e) the name of the institution in which the work was carried out; and (f) the present email and postal address of the author to whom proofs should be sent.

Page 2. *Abstract.* This should be a single paragraph, in passive mode, no more than 200 words long, a concise summary of the paper intelligible on its own in conjunction with the title, without abbreviations or references.

Page 3. *et seq.* The main body of the text may contain the following sections in the sequence indicated:

Discussion, (e) Acknowledgements, (f) Literature Cited, (g) Appendices, (h) Tables, (i) Legends to Figures. An extra section between (a) and (b) for Study Site or Study Species might be necessary.

Main headings should be in capital type and ranged left; sub-headings should be ranged left. A *Short Communication* has a title and keywords but no abstract (except what is entered in Manuscript Central) or section headings until Acknowledgements and item Literature Cited.

Acknowledgements should be brief. *Notes* should be avoided if at all possible; any notes will be printed at the end of the paper and not as footnotes.

Scientific names. The complete Latin name (genus, species and authority) must be given in full for every organism when first mentioned in the text unless a standard reference is available which can be cited. Authorities might alternatively appear in Tables where they are first used.

Units of measurement. Measurements must be in metric units; if not, metric equivalents must also be given. The minus index (m^{-1} , mm^{-3}) should be used except where the unit is an object, e.g. 'per tree', not 'tree⁻¹'. Use d^{-1} , mo^{-1} and y^{-1} for per day, per month and per year.

Abbreviations. In general, abbreviations should be avoided. Numbers one to nine should be spelled out and number 10 onwards given in figures. Dates should follow the sequence day-month-year, e.g. 1 January 1997. The 24-hour clock should be used, e.g. 16h15.

Online supplementary material

Supplementary material is not copy edited or typeset but loaded onto CJO exactly as supplied. Supplementary material must be submitted at the same time as the article and must be clearly marked to distinguish it from the main article text.

Authors should ensure that they mention within their article that supplementary material is available on CJO.

Language

All papers should be written in English, and spelling should generally follow *The Concise Oxford Dictionary of Current English*. Abstracts in other languages will be printed if the author so desires together with an abstract in English. All abstracts must be provided by the author.

Literature cited

References to literature in the text should conform to the 'name-and-date' system: e.g. Fleming (1982); (Goh & Sasekumar 1980); Montgomery *et al.* (1981). If a number of references are cited at one place in the text, they should be arranged alphabetically and not chronologically. In the reference list citations should take the forms given below. References with two or more authors should be arranged first alphabetically then chronologically. The names of cited journals should be given in full. Certain foreign language citations may be translated into English, and this should always be done where the English alphabet is not used (e.g. Chinese, Russian, Thai).

FLEMING, T. H. 1982. Foraging strategies of plant-visiting bats. Pp. 287–325 in Kunz, T. H. (ed.). *Ecology of bats*. Plenum Press, New York. 425 pp.

GOH, A. H. & SASEKUMAR, A. 1980. The community structure of the fringing coral reef, Cape Rachado. *Malayan Nature Journal* 34:25–27.

MONTGOMERY, G. G., BEST, R. C. & YAMAKOSHI, M. 1981. A radio-tracking study of the American manatee *Trichechus inunguis* (Mammalia: Sirenia). *Biotropica* 13:81–85.

WHITMORE, T. C. 1984. *Tropical rain forests of the Far East*. (second edition). Oxford University Press, Oxford. 352 pp.

Use the following as contractions in text: 'pers. obs.', 'pers. comm.'; but 'unpubl. data', 'in press'. Authors should double-check that all references in the text correspond exactly to those in the Literature Cited section.

Tables and figures

Tables should be typed, together with their titles, on separate pages. Column headings should be brief, with units of measurement in parentheses. Vertical lines should not be used to separate columns. Avoid presenting tables that are too large to be printed across the page; table width must not exceed 80 characters, including spaces between words, figures and columns. Each table should be numbered consecutively with arabic numerals. The author should indicate in the text where tables and figures are to be inserted; all tables and figures must be mentioned in the text.

Authors should ensure that all figures, whether line drawings or photographs, clarify or reduce the length of the text. The preferred graphics package is Freehand, but many others may be accepted. Please indicate file format and graphics software used for originating artwork files. Typefaces should be restricted to Monotype, Adobe and Bitstream font libraries. High resolution figures should be supplied as TIFF or EPS files, but never as Postscript files. Line drawings should be scanned at 300 dpi and use only conventional Postscript files. Halftones to be scanned at 600 dpi with the preset dot range from 1–96%. If you wish to compress the files use lossless compression package software such as the LZW compression package.

Proofs

When pdf proofs are received they should be corrected carefully and returned to the publisher without delay. Errors remaining in these first proofs after the author has checked them are the author's responsibility. Any further editorial changes, apart from minor grammatical and syntactical improvements, will be communicated to the author before second proofs are prepared. Ensure that the editorial office knows of changes in your address.

Offprints

Upon publication the corresponding author will automatically receive a pdf of their article from Cambridge University Press. Authors will be offered the opportunity to order paper offprints by using the form supplied at proof stage.

Copyright

Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper. Authors receiving requests for permission to reproduce their work should contact Cambridge University Press for advice.

Business correspondence

Correspondence concerning offprints, copyright, back numbers, advertising and sales to libraries should be addressed to the publishers: Journals Department, Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, UK or Cambridge University Press, 32 Avenue of the Americas, New York, NY 10013–2473 USA.

CONTENTS

Host preference and host limitation of vascular epiphytes in a tropical dry forest of central Mexico C. A. Vergara-Torres, M. C. Pacheco-Álvarez & A. Flores-Palacios	563
Effect of host-bark extracts on seed germination in <i>Tillandsia recurvata</i> , an epiphytic bromeliad S. Valencia-Díaz, A. Flores-Palacios, V. Rodríguez-López, E. Ventura-Zapata & A. R. Jiménez-Aparicio	571
Plant species selection by free-ranging cattle in southern Bolivian tropical montane forests S. Marquardt, S. G. Beck, F. D. Encinas, H. Alzérreca A., M. Kreuzer, & A. C. Mayer	583
Experimental evidence that fire causes a tree recruitment bottleneck in an Australian tropical savanna L. D. Prior, R. J. Williams & D. M. J. S. Bowman	595
Responses of ecosystem carbon dioxide fluxes to soil moisture fluctuations in a moist Kenyan savanna D. O. Otieno, G. O. K'Otuto, J. N. Maina, Y. Kuzyakov & J. C. Onyango	605
Evidence for tolerance of parasitism in a tropical cavity-nesting bird, planalto woodcreeper (<i>Dendrocolaptes platyrostris</i>), in northern Argentina A. R. Norris, K. L. Cockle & K. Martin	619
Distribution of phosphorus in an above-to-below-ground profile in a Bornean tropical rain forest N. Imai, K. Kitayama & J. Titin	627
Rain-forest canopy-connectivity and habitat selection by a small neotropical primate, Geoffroy's tamarin (<i>Saguinus geoffroyi</i>) D. Madden, P. A. Garber, S. L. Madden & C. A. Snyder	637
<i>Short Communication</i>	
Evidence of altitudinal moult-migration in a Central American hummingbird, <i>Amazilia cyanura</i> K. C. Fraser, A. W. Diamond & L. Chavarría	645
Index of Subjects	649
Index of Authors	653
