

▼ **THE LIMITATIONS OF DEDUCTIVISM**
Edited by **ADOLF GRÜNBAUM** and **WESLEY C. SALMON**

The six essays in this volume, by distinguished philosophers of science including Ronald N. Giere, Carl G. Hempel, Henry E. Kyburg, Jr., Wesley C. Salmon and Frederick Suppe, explore the extent to which the scope of deduction is limited, and the ways in which it must be supplemented to produce an adequate account of the methods of science. \$32.50

▼ **SPACE-PERCEPTION AND THE PHILOSOPHY OF SCIENCE**
PATRICK A. HEELAN

New in paper—"An important, timely work that, from a phenomenological, hermeneutic stance, illuminates current issues in the philosophy of science and gives a promising direction for progress in that discipline. . . . Highly recommended." —*Choice* \$12.95 paper

Gassendi the Atomist

Advocate of History in an Age of Science

Lynn S. Joy

This study of the life and work of the French physicist and philosopher, Pierre Gassendi, describes his revival during the 17th century of the ancient Greek philosophy of Epicurean atomism. His theories about atoms and his explanations were developed as parts of a much larger project for writing the history of philosophy, which is shown to be a distinctive example of how human scholarship affected the development of science.

PHILOSOPHY & THE SOCIAL SCIENCES

On the Logic of the Social Sciences

Jürgen Habermas

translated by Shierry Weber Nicholsen and Jerry A. Stark

In a sustained and provocative argument that ends with his own sharply profiled position, Jürgen Habermas considers the main lines of thought pursued by epistemologists and methodologists of the social sciences, from neo-Kantianism to behaviorism.

232 pp. \$22.50

Weber and Rickert

Concept Formation in the Cultural Sciences

Guy Oakes

Both philosophers and social scientists will welcome Max Weber's highly original discussion of the troublesome problem of the objectivity of social science. Guy Oakes traces the connection of Weber's work to that of philosopher Heinrich Rickert, reconstructing Rickert's notoriously difficult concepts in order to isolate the important, and until now poorly understood roots of problems in Weber's own work.

208 pp. \$20.00

Ideology and Rationality in the History of the Life Sciences

Georges Canguilhem

translated by Arthur Goldhammer

"... take away Canguilhem and you will no longer understand much about Althusser, Althusserism and a whole series of discussions which have taken place among French Marxists; you will no longer grasp what is specific to sociologists such as Bourdieu, Castel, and Passeron and what marks them so strongly within sociology; you will miss an entire aspect of the theoretical work done by psychoanalysts, particularly by the followers of Lacan." — Michel Foucault

This collection of Canguilhem's essays discusses the role played by ideological factors in determining the direction if not the results of scientific work.

Saving Belief

A Critique of Physicalism

Lynne Rudder Baker

As a sustained challenge to the prevailing interpretation of cognitive science, this timely book fills a large gap in the philosophical literature. It critically examines a wide range of physicalistic conceptions of mind in the works of Jerry A. Fodor, Stephen P. Stich, Paul M. Churchland, Daniel C. Dennett, and others. Part I argues that intentional concepts cannot be reduced to nonintentional (and nonsemantic) concepts; Part II argues that intentional concepts are nevertheless indispensable to our cognitive enterprises and thus need no foundation in physicalism.

Why Preserve Natural Variety?

Bryan G. Norton

For all persons seriously concerned about the destruction of natural environments in the contemporary world, this book presents a comprehensive rationale for preserving wild species and ecosystems. Bryan G. Norton appeals most centrally to "transformative value," the power of human contacts with wild species to transform and uplift the human spirit.

Sponsored by the Center for Philosophy and Public Policy at the University of Maryland Studies in Moral, Political, and Legal Philosophy—Marshall Cohen, Editor

The Preservation of Species

The Value of Biological Diversity

Edited by *Bryan G. Norton*

Gathered at the Center for Philosophy and Public Policy at the University of Maryland, members of a multidisciplinary working group held extensive discussion on the preservation of biological diversity on earth. From these sessions emerged a book that addresses two related questions: first, why preserve species, and second, what priorities should govern decisions when there are insufficient funds to save all species?

MIND CHILDREN

The Future of Robot
and Human Intelligence

HANS MORAVEC

"Moravec's central theme is the utter transformation of human-kind into an entirely new form of life.... Here we are engineering new minds either for ourselves or for our robotic "children" – the choice is ours. [He] brings matters to a kind of ultimate focus by presenting new and mind-boggling possibilities with an insistent and somewhat bone-chilling logic." – A.K. Dewdney
\$18.95 cloth

SCIENCE IN ACTION

BRUNO LATOUR

"One cannot but be impressed by the scope of Latour's work... I predict that [it] will have an impact comparable to Thomas Kuhn's *Structure of Scientific Revolutions* both as a provocation to philosophers and as an inspiration to sociologists and historians of science."
– Nicholas Jardine, *Times Literary Supplement*
\$12.95 paper

IN SEARCH OF SAFETY

Chemicals and Cancer Risk

**JOHN D. GRAHAM,
LAURA C. GREEN,
AND MARC J. ROBERTS**

In this important book, the authors squarely address the complex interaction of science and regulatory policy in the effort to lower the levels of carcinogenic chemicals in the environment economically.
\$35.00 cloth

THE PASTEURIZATION OF FRANCE

BRUNO LATOUR

TRANSLATED BY ALAN
SHERIDAN AND JOHN LAW

"What Latour has achieved in this book is to provide a practical example of the fecundity, not of a theory, but of a set of questions, involving the relation of science and society, the nature of power, the relation of knowledge and politics." – Samuel Weber
\$30.00 cloth

ON HUMAN NATURE

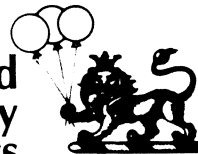

EDWARD O. WILSON

*Winner of the Pulitzer Prize for
General Nonfiction*

"Wilson is a sophisticated and marvelously human writer. His vision is a liberating one, and a reader of this splendid book comes away with a sense of kinship that exists among the people, animals, and insects that share the planet." – *New Yorker*
