ROBOTICS & COMPUTER-INTEGRATED MANUFACTURING

An International Journal

Editors-in-Chief: N P SUH, *Laboratory for Manufacturing and Productivity, MIT, Cambridge, MA 02319, USA,* T SATA, *Dept. of Precision Machinery Engineering, University of Tokyo, 7-4-1 Hongo Bunkyo-ku, Tokyo, Japan,* and G SPUR, *Institute of Machine Tools and Manufacturing Technology, Technical University of Berlin, Fasanenstrasse 90, 1000 Berlin 12, FRG*

Robotics & Computer-Integrated Manufacturing provides an international forum for the exchange of ideas between engineers and computer scientists in industry, government and academia. The journal features original papers on theoretical, experimental and applied robotics and computer-integrated manufacturing with an emphasis on flexible manufacturing systems. Although technological aspects are uppermost, the socio-economic aspects of automated manufacturing and production are given due consideration. Papers are welcomed for editorial consideration, and should be sent to the address shown above.

New Patents Section — The journal now contains abstracts and illustrations of recently issued United States Patents and published patent applications filed from over 30 countries under the Patent Co-operation Treaty.

Software Survey Section — This new section reports developments in appropriate specialist software.

The journal covers the following areas:

Computer languages and architectures
Graphics
Artificial intelligence and expert systems
In-process metrology
System integration
Interface standards
Manipulators and end-effectors
CAD/CAM/CAT
Controls systems
Robot related research
Product control and reliability
High precision engineering and factory automation
Manufacturing systems modeling simulation
Sensors, signal processing and pattern recognition
Machine tool error reduction using computer controlled compensation
Process planning
Conceptual designs of future factories
Production scheduling and inventory control
Environmental, human and economic factors

Subscription Information
Published quarterly (Volume 3)

Annual subscription (1986)	**US$125.00**
Two-year rate (1986/87)	**US$237.50**

FREE SAMPLE COPIES AVAILABLE ON REQUEST

Advertising rate card available on request.
Back issues and current subscriptions are also available in microform.
Prices are subject to change without notice. Journal prices include postage and insurance. Sterling prices are available to UK and Eire customers on request.

Artificial Intelligence Series, edited by Patrick Winston and Michael Brady

Legged Robots That Balance

Marc H. Raibert

Marc Raibert's unique work on legged locomotion presents exciting engineering and science, along with fascinating implications for theories of human motor control. This book describes the study of physical machines that run and balance on just one leg, including analysis, computer simulation, and laboratory experiments. It describes how the principles of locomotion discovered with one leg can be extended to systems with several legs and reports preliminary experiments with a quadruped machine that runs using these principles
$30 00

The Acquisition of Syntactic Knowledge

Robert Berwick

This landmark work in computational linguistics is of great importance both theoretically and practically because it shows that much of English grammar can be learned by a simple program
$27 50

Theory and Practice of Robots and Manipulators

Proceedings of RoManSy 1984, the Fifth CISM-IFToMM Symposium

edited by A. Morecki, G. Bianchi, and K. Kedzior

Now more than a decade old, the RoManSy meetings on robotics focus primarily on mechanical engineering and control, drawing heavily on work in Eastern Europe and the USSR. Working papers cover mechanics, control of motion, synthesis and design, biomechanics of motion–locomotion, man-intelligent machine systems, application and performance evaluation
$45 00

Performance and Evaluation of LISP Systems

Richard P. Gabriel

This final report of the Stanford LISP Performance Study describes implementation techniques, performance tradeoffs, benchmarking techiques, and performance results for all of the major LISP dialects in use today. Computer Systems Series, Research Reports and Notes, edited by Herb Schwetman

OECD

Just Published...
... in the **"ICCP"** (Information, Computer, Communication Policy) Series:

No. 9: SOFTWARE: An Emerging Industry

OECD, has just published the first thorough study of one of the most dynamic of today's fast-growing fields,
SOFTWARE: An Emerging Industry.
Part one, "Technology and Industrial Organisation", surveys the main types of software and their varying life cycles as well as the growth and development of the specialised industry devoted to its production. The particular cases of embedded micro-electronics and industrial automation software are also analysed.

The second part, "The Role and Action of Governments" studies official research and training policies, government software procurement, standardisation issues, the role of telecommunications infrastructures and implications for software of industrial policies in the hardware industry. Growth problems in software firms and government support in several OECD countries are also considered.

Foreign trade regulations and legal aspects of software are examined and numerous tables and graphs are presented in Annex.

VENTURE CAPITAL IN INFORMATION TECHNOLOGY

Venture capitalism, an expanding form of financial intermediation in the United States, has accounted for most of the innovative and successful company start-ups in industries and services based on information technology.

This field, in turn, has been the prime target for venture capital activity. The potential for extension of venture capitalism beyond the United States is examined.

Notes for Contributors

1. Manuscripts should preferably be written in English, but papers in French and German will also be accepted. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Deputy Editor or the Editor.

2. Typescripts should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.

3. A short abstract of about 80 words should precede the main text. *List of symbols*: A typewritten list of any special symbols should be submitted with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential to help the typesetter and to avoid costly correction in proof.

4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.

5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy. Figures should be numbered consecutively, with arabic numerals, have descriptive captions, and be mentioned in the text. The correct position for each figure should be indicated in the margin of the manuscript.

6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables. Number tables consecutively with roman numerals. Each should have a brief heading. Exceptionally lengthy tables may be summarized for publication with a note that copies of details can be obtained from the authors.

7. *Equations:* Wherever possible, mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. The printer will set all mathematical symbols in italics unless otherwise indicated; symbols or letters to be set in roman (upright) type should be encircled in pencil, while bold letters should be shown by a wavy underline.

8. *References:* In the text, references are indicated by superior arabic numbers (without brackets), and should be confined to publish work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names; cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of *Chemical Abstracts* or *Physical Abstracts,* and be underlined for italics: P.W. Anderson, "More is different" *Science* **177**, 393 (1972) C.V. Negoita, *Fuzzy Systems* (Abacus Press, Tunbridge Wells, UK, 1980)

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

9. *Proofs:* Page proofs will be sent to authors for correction, for return within 48 hours by airmail. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

10. Manuscripts, whether accepted or rejected, will not be returned to the authors.

11. Submission of an article will be taken to imply that it has not been previously published and that it is not on offer to any other publisher.
