

Soliton dynamics in an extended nonlinear Schrödinger equation with a spatial counterpart of the stimulated Raman scattering <i>E. M. Gromov and B. A. Malomed</i>	1057
Ion acoustic waves in expanding strongly coupled plasmas <i>J. T. Mendonça, N. Shukla, D. P. Resendes and A. Serbeto</i>	1063
Plasma processes at comet Churyumov–Gerasimenko: Expectations for Rosetta <i>D. A. Mendis and M. Horányi</i>	1067
Waves in a dusty plasma over the illuminated part of the Moon <i>S. I. Popel, G. E. Morfill, P. K. Shukla and H. Thomas</i>	1071
An exact solution in a gravitating fluid with a density-dependent viscosity <i>Nikhil Chakrabarti and Hans Schamel</i>	1075
Low-dimensional relativistic degeneracy in quantum plasmas <i>M. Akbari-Moghanjoughi and A. Esfandyari-Kalejahi</i>	1081
Semiclassical relativistic fluid theory for electrostatic envelope modes in dense electron–positron–ion plasmas: Modulational instability and rogue waves <i>Ioannis Kourakis, Michael Mc Kerr and Ata Ur-Rahman</i>	1089
The plasma wake field excitation: Recent developments from thermal to quantum regime <i>Renato Fedele, Fatema Tanjia, Sergio De Nicola and Dušan Jovanović</i>	1095
Signature of gyro-phase drift <i>Mark E. Koepke, J. J. Walker, M. I. Zimmerman, W. M. Farrell and V. I. Demidov</i>	1099
Low-frequency electrostatic waves in a magnetized, current-free, heavy negative ion plasma <i>S. H. Kim, R. L. Merlino, J. K. Meyer and M. Rosenberg</i>	1107
Current-driven drift wave instability in a collisional dusty negative ion plasma <i>M. Rosenberg</i>	1113
Dust grain surface potential in a non-Maxwellian dusty plasma with negative ions <i>A. A. Abid, S. Ali and R. Muhammad</i>	1117
Practical expression for an effective ion-neutral collision frequency in flowing plasmas of some noble gases <i>Sergey A. Khrapak</i>	1123
How to quantify solid–liquid phase transition: Lennard–Jones system case study <i>Boris A. Klumov</i>	1125
Coupling of the Okuda–Dawson model with a shear current-driven wave and the associated instability <i>W. Masood and H. Saleem</i>	1129
On angular momentum and rest mass of the photon <i>Bo Lehnert</i>	1133

Instructions for Authors

Editorial policy The journal welcomes submissions in any of the areas of plasma physics. Its scope includes experimental and theoretical work on basic plasma physics, the plasma physics of magnetic and inertial fusion, laser–plasma interactions, industrial plasmas, plasma devices and plasmas in space and astrophysics. This list is, of course, merely illustrative of the wide range of topics on which papers are invited, and is not intended to exclude any aspect of plasma physics that is not explicitly mentioned.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Journal of Plasma Physics* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editors' decision on the suitability of a manuscript for publication is final.

Submission of manuscripts Papers may be submitted to the Editor or any of the Associate Editors, preferably by email in pdf format. When a paper is accepted, the authors will be asked to supply source files in LaTeX or Word. Instructions for the preparation of these files and LaTeX style files are given in the Instructions for Contributors link at journals.cambridge.org/pla.

Incremental publishing and DOIs In order to make articles which have been accepted for publication in *Journal of Plasma Physics* available as quickly as possible, they are now published incrementally online (at Cambridge Journals Online; journals.cambridge.org) The online version is available as soon as author corrections have been completed and before the article appears in a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI – Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. See journals.cambridge.org/pla.

Proof reading Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

Offprints Corresponding authors will receive a PDF of their article upon publication. Print offprints may be purchased from the publisher if ordered at first proof stage.

Copying This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per copy fee of \$16.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022–3778/2013 \$16.00.

ISI Tear Sheet Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions.

For all other use, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

JOURNAL OF PLASMA PHYSICS

VOLUME 79 • PART 6 • DECEMBER 2013

Preface

B. Eliasson, L. Stenflo, R. Bingham and J. T. Mendonça 981

Research Articles

- Stimulated Brillouin scattering in magnetized plasmas
G. Brodin and L. Stenflo 983
- The role of collisions on mode competition between the two-stream and Weibel instabilities
K. A. Humphrey, R. M. G. M. Trines, D. C. Speirs, P. Norreys and R. Bingham 987
- Exact solution to neutrino-plasma two-flavor dynamics
Fernando Haas and José T. Mendonça 991
- An electromagnetic gamma-ray free electron laser
Bengt Eliasson and Chuan Sheng Liu 995
- Numerical simulations of unbounded cyclotron-maser emissions
David C. Speirs, S. L. McConville, K. M. Gillespie, A. D. R. Phelps and K. Ronald 999
- Self-organization and control in stimulated Raman backscattering
Miloš M. Škorić, Ljubomir Nikolić and Seiji Ishiguro 1003
- Asymmetric oscillatory expansion of a cylindrical plasma
A. R. Karimov, M. Y. Yu and L. Stenflo 1007
- On the turbulence-induced seeding of large scale-length magnetic field during the interactions of plasma clouds
S. I. Krasheninnikov 1011
- Nonlinear fluid equations for fully toroidal electromagnetic waves for the core tokamak plasma
J. Weiland and C. S. Liu 1015
- Debye-sheath properties in the Tonks–Langmuir discharge with warm neutrals
L. Kos, D. D. Tskhakaya (Sr.), S. Kuhn and N. Jelić 1021
- One-dimensional macro-scale matter wave dynamics potentially embedded in the Lorentz trajectory
Ram K. Varma 1025
- Ambiguities in the Tsallis description of non-thermal plasma species
Frank Verheest 1031
- Negative ion sound solitary waves revisited
R. A. Cairns 1035
- Dust-acoustic supersolitons in a three-species dusty plasma with kappa distributions
M. A. Hellberg, T. K. Baluku, F. Verheest and I. Kourakis 1039
- Dust shear Alfvén solitary structures in an opposite polarity dust medium
A. A. Mamun 1045
- Super rogue waves in ultracold neutral nonextensive plasmas
S. A. El-Tantawy, N. A. El-Bedwehy and W. M. Moslem 1049

(Contents continued facing inside back cover)
