

Notes for Contributors

1. Manuscripts should preferably be written in English, but papers in French and German will also be accepted. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Deputy Editor or the Editor.

2. Typescripts should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.

3. A short abstract of about 80 words should precede the main text. *List of symbols:* A typewritten list of any special symbols should be submitted with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential to help the typesetter and to avoid costly correction in proof.

4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.

5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy. Figures should be numbered consecutively, with arabic numerals, have descriptive captions, and be mentioned in the text. The correct position for each figure should be indicated in the margin of the manuscript.

6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables. Number tables

consecutively with roman numerals. Each should have a brief heading. Exceptionally lengthy tables may be summarized for publication with a note that copies of details can be obtained from the authors.

7. Equations: Wherever possible, mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. The printer will set all mathematical symbols in italics unless otherwise indicated; symbols or letters to be set in roman (upright) type should be encircled in pencil, while bold letters should be shown by a wavy underline.

8. References: In the text, references are indicated by superior arabic numbers (without brackets), and should be confined to publish work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names; cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of *Chemical Abstracts* or *Physical Abstracts*, and be underlined for italics: P.W. Anderson, "More is different" *Science* **177**, 393 (1972) C.V. Negoita, *Fuzzy Systems* (Abacus Press, Tunbridge Wells, UK, 1980)

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

9. Proofs: Page proofs will be sent to authors for correction, for return within 48 hours by airmail. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

10. Manuscripts, whether accepted or rejected, will not be returned to the authors.

11. Submission of an article will be taken to imply that it has not been previously published and that it is not on offer to any other publisher.

ROBOTICA

Volume 8 Part 2

April–June 1990

CONTENTS

Reports and Surveys (Innovative Robots for Medical and Dental Applications, Miniaturization of Robots, Neural Networks for Industry, Robotics Research in Australia, Robots Worldwide, Systems Development, Trajectory Planning for a Mobile Robot). B. H. Rudall (UK)	91
A Transputer-Based System for Locating Parts and Controlling an Industrial Robot, D. T. Pham, Huosheng Hu and J. Pote (UK)	97
DELTA: A Simple and Efficient Parallel Robot, F. Pierrot, C. Reynaud and A. Fournier (France)	105
Tactile Sensing of 3 Dimensional Surface Features, R. Andrew Russell (Australia)	111
Payload Capacity of Balanced Robotic Manipulators, T. G. Lim, H. S. Cho and W. K. Chung (South Korea)	117
An Approach to the Modelling of the Highest Control Level of Flexible Manufacturing Cell, M. Jocković, M. Vukobratović and Z. Ognjanović (Yugoslavia)	125
Optimization of Manipulator Dynamics in Non Extreme Design Case, Xiong Youlun and Ding Han (P.R. of China)	131
Collision-Free Motion Planning for Two Articulated Robot Arms Using Minimum Distance Functions, C. Chang, M. J. Chung and Z. Bien (Korea)	137
Requirements for Inertial Sensor Systems for Measuring Robot Positions, H. Janocha and D. Schmidt (West Germany)	145
Deriving Complex Location Data from Simple Movement Sensors, J. L. Gordon, D. Williams and C. A. Hobson (UK)	151
Certainty Grid Representation for Robot Navigation by a Bayesian Method, Dong Woo Cho (South Korea)	159
Conference News	167
Book Reviews	169
Announcements	175
Special Announcement	176
