Designed with the primary object of supplying a progressive course for Air Training Corps Cadets, the general plan has been to follow the syllabus as laid down in the A.T.C. Syllabus of Training. In its construction two main aims have been kept in view :

- (a) To afford a rapid revision of elementary processes.
- (b) To show the application of those processes to the many and varied problems and interests of the Services.

By a wide selection of problems an attempt has been made to introduce an enlivening and instructive interest in the special branches of the Services into which cadets may eventually pass, so that, by this means, they may see the value of a training in elementary mathematics, through its practical application.

**THE MATHEMATICAL ASSOCIATION**, which was founded in 1871, as the *Association for the Improvement of Geometrical Teaching*, aims not only at the promotion of its original object, but at bringing within its purview all branches of elementary mathematics.

Its purpose is to form a strong combination of all persons who are interested in promoting good methods of teaching mathematics. The Association has already been largely successful in this direction. It has become a recognised authority in its own department, and is continuing to exert an important influence on methods of examination.

“ **THE MATHEMATICAL GAZETTE** ” (published by Messrs. G. BELL & SONS, LTD.) is the organ of the Association. It is issued at least five times a year. The price per copy (to non-members) is usually 3s. each.

The *Gazette* contains—Articles, Notes, Reviews, etc., dealing with elementary mathematics, and with mathematical topics of general interest.
